Contents

1 Basic Measure Theory 1
1.1 Classes of Sets 1
1.2 Set Functions 11
1.3 The Measure Extension Theorem 18
1.4 Measurable Maps 36
1.5 Random Variables 45

2 Independence 53
2.1 Independence of Events 53
2.2 Independent Random Variables 61
2.3 Kolmogorov's 0–1 Law 69
2.4 Example: Percolation 73

3 Generating Functions 85
3.1 Definition and Examples 85
3.2 Poisson Approximation 89
3.3 Branching Processes 91

4 The Integral 95
4.1 Construction and Simple Properties 95
4.2 Monotone Convergence and Fatou's Lemma 104
4.3 Lebesgue Integral Versus Riemann Integral 107

5 Moments and Laws of Large Numbers 113
5.1 Moments 113
5.2 Weak Law of Large Numbers 121
5.3 Strong Law of Large Numbers 125
5.4 Speed of Convergence in the Strong LLN 135
5.5 The Poisson Process 139

6 Convergence Theorems 147
6.1 Almost Sure and Measure Convergence 147
6.2 Uniform Integrability 153
6.3 Exchanging Integral and Differentiation 160

7 L^p-Spaces and the Radon–Nikodym Theorem 163
7.1 Definitions 163
7.2 Inequalities and the Fischer–Riesz Theorem 165
7.3 Hilbert Spaces 172
7.4 Lebesgue's Decomposition Theorem 175
7.5 Supplement: Signed Measures 179
7.6 Supplement: Dual Spaces 186

8 Conditional Expectations 191
8.1 Elementary Conditional Probabilities 191
8.2 Conditional Expectations 195
8.3 Regular Conditional Distribution 203

9 Martingales 213
9.1 Processes, Filtrations, Stopping Times 213
9.2 Martingales 218
9.3 Discrete Stochastic Integral 223
9.4 Discrete Martingale Representation Theorem and the CRR Model 224

10 Optional Sampling Theorems 229
10.1 Doob Decomposition and Square Variation 229
10.2 Optional Sampling and Optional Stopping 233
10.3 Uniform Integrability and Optional Sampling 239

11 Martingale Convergence Theorems and Their Applications 241
11.1 Doob's Inequality 241
11.2 Martingale Convergence Theorems 243
11.3 Example: Branching Process 254

12 Backwards Martingales and Exchangeability 257
12.1 Exchangeable Families of Random Variables 257
12.2 Backwards Martingales 263
12.3 De Finetti's Theorem 266

13 Convergence of Measures 273
13.1 A Topology Primer 274
13.2 Weak and Vague Convergence 281
13.3 Prohorov's Theorem 290
13.4 Application: A Fresh Look at de Finetti's Theorem 300

14 Probability Measures on Product Spaces 303
14.1 Product Spaces 304
14.2 Finite Products and Transition Kernels 307
14.3 Kolmogorov's Extension Theorem 317
14.4 Markov Semigroups 322

15 Characteristic Functions and the Central Limit Theorem 327
15.1 Separating Classes of Functions 327
15.2 Characteristic Functions: Examples 336
15.3 Lévy's Continuity Theorem 344
15.4 Characteristic Functions and Moments 349
15.5 The Central Limit Theorem 356
15.6 Multidimensional Central Limit Theorem 365

16 Infinitely Divisible Distributions 367
16.1 Lévy–Khinchin Formula 367
16.2 Stable Distributions 381

17 Markov Chains 391
17.1 Definitions and Construction 391
17.2 Discrete Markov Chains: Examples 399
17.3 Discrete Markov Processes in Continuous Time 404
17.4 Discrete Markov Chains: Recurrence and Transience 411
17.5 Application: Recurrence and Transience of Random Walks 415
17.6 Invariant Distributions 423
17.7 Stochastic Ordering and Coupling 429

18 Convergence of Markov Chains 435
18.1 Periodicity of Markov Chains 435
18.2 Coupling and Convergence Theorem 439
18.3 Markov Chain Monte Carlo Method 445
18.4 Speed of Convergence 453

19 Markov Chains and Electrical Networks 461
19.1 Harmonic Functions 462
19.2 Reversible Markov Chains 465
19.3 Finite Electrical Networks 467
19.4 Recurrence and Transience 473
19.5 Network Reduction 480
19.6 Random Walk in a Random Environment 488

20 Ergodic Theory 493
20.1 Definitions 493
20.2 Ergodic Theorems 497
20.3 Examples 500
20.4 Application: Recurrence of Random Walks 502
20.5 Mixing 506
20.6 Entropy 510

21 Brownian Motion 515
21.1 Continuous Versions 515
21.2 Construction and Path Properties 522
21.3 Strong Markov Property 529
21.4 Supplement: Feller Processes 532
21.5 Construction via L^2-Approximation 535
21.6 The Space $C([0, \infty))$ 544
21.7 Convergence of Probability Measures on $C([0, \infty))$ 546
21.8 Donsker's Theorem 549
21.9 Pathwise Convergence of Branching Processes 553
21.10 Square Variation and Local Martingales 560

22 Law of the Iterated Logarithm 573
22.1 Iterated Logarithm for the Brownian Motion 573
22.2 Skorohod's Embedding Theorem 576
22.3 Hartman–Wintner Theorem 583

23 Large Deviations 587
23.1 Cramér's Theorem 588
23.2 Large Deviations Principle 594
23.3 Sanov's Theorem 598
23.4 Varadhan's Lemma and Free Energy 603

24 The Poisson Point Process 611
24.1 Random Measures 611
24.2 Properties of the Poisson Point Process 616
24.3 The Poisson–Dirichlet Distribution 627

25 The Itô Integral 635
25.1 Itô Integral with Respect to Brownian Motion 635
25.2 Itô Integral with Respect to Diffusions 644
25.3 The Itô Formula 648
25.4 Dirichlet Problem and Brownian Motion 657
25.5 Recurrence and Transience of Brownian Motion 659

26 Stochastic Differential Equations 665
26.1 Strong Solutions 665
26.2 Weak Solutions and the Martingale Problem 675
26.3 Weak Uniqueness via Duality 682
