Preface	8
1 Introduction to Process Control	11
1.1 PRELIMINARIES	11
1.2 OBJECTIVES OF CONTROL	12
1.3 BASIC CONCEPTS OF CONTROL	13
1.4 ON FEEDBACK CONTROL SYSTEMS	15
1.5 COMPOSITION OF CONTROL SYSTEMS	16
1.6 BLOCK REPRESENTATION OF CONTROL SYSTEMS	19
1.7 VARIABLE NAMES IN CONTROL SYSTEMS	23
1.8 PROCESS SPECIFICATION	25
1.9 STEPS TOWARD CONTROL SYSTEM DESIGN	26
1.10 LISTING OF CONTROL SYSTEMS	31
1.11 HISTORY OF CONTROL	35
1.12 FUNDAMENTAL LAWS OF CONTROL	39
1.13 SUMMARY	39
2 Process Characteristics	42
2.1 PROCESSES FROM A CONTROL POINT OF VIEW	42
2.2 INPUT-OUTPUT PROCESS SIGNALS	43
2.3 MOST COMMON SIGNALS	44
2.4 PHYSICAL UNITS OF PROCESS VARIABLES	45
2.5 STATIC CHARACTERISTICS	46
2.6 DYNAMIC CHARACTERISTICS	48
2.7 TYPES OF PROCESSES	51
2.8 QUANTITATIVE FEATURES OF TRANSIENTS	53
2.9 TYPICAL PROCESSES AND THEIR TRANSIENTS	55
2.10 CHARACTERIZATION OF PROCESSES RESPONSES	63
2.11 CLOSING COMMENTS	67
2.12 SUMMARY	69
3 Process Models	70
3.1 GENERAL MODELS	70
3.2 PROCESS MODELING BY DIFFERENTIAL EQUATIONS	73
3.3 EXAMPLES OF PROCESS MODELS	75
3.4 STATE-SPACE AND INPUT-OUTPUT MODELS	82
3.5 CLASSICAL VERSUS MODERN CONTROL THEORY	85
3.6 SOLUTIONS OF DIFFERENTIAL EQUATIONS	86
3.7 LAPLACE TRANSFORMS	89
3.8 PROPERTIES OF THE LAPLACE TRANSFORMS	92
3.9 LAPLACE TRANSFORM VS. DIFFERENTIAL EQUATIONS	99
3.10 TRANSFER FUNCTIONS OF DYNAMIC SYSTEMS	102
3.11 SYSTEM ANALYSIS	107
3.12 MULTI-COMPONENT SYSTEM CALCULUS	112
3.13 TRANSFER FUNCTIONS OF TYPICAL PROCESSES	118
3.14 NON-RATIONAL TRANSFER FUNCTIONS	134
3.15 NONLINEAR MODELS	136
3.16 A TECHNIQUE OF IDENTIFICATION	137
3.17 IDENTIFICATION OF FOPDT MODELS	139
3.18 IDENTIFICATION OF SOPDT MODELS	143
3.19 IDENTIFICATION OF FOPDTI MODELS	145
3.20 COMPARATIVE ANALYSIS OF DIFFERENT MODELS	145
3.21 AN ALGORITHM FOR PARAMETER ESTIMATION	147
3.22 EXAMPLES OF IDENTIFICATION	148
3.23 IDENTIFICATION OF OSCILLATORY RESPONSES	152
4 Feedback Control Systems	156
4.1 MAIN DESIGN ISSUES	156
4.2 CONVENTIONAL CONTROL SYSTEMS	157
4.3 THE GANG OF FOUR	161
4.4 THE GANG OF FOUR IN AN ACTION	163
4.5 STABILITY OF FEEDBACK CONTROL SYSTEMS	165
4.6 EXAMPLES OF STABILITY ANALYSIS	169

4.7	STEADY-STATE ANALYSIS	172
4.8	TRANSIENT ANALYSIS	178
4.9	BASIC TYPES OF FEEDBACK CONTROLLERS	179
4.10	AUXILIARY CONTROLLER DEVICES	191
4.11	A PROCEDURE FOR FEEDBACK ANALYSIS	192
4.12	CONTROL OF A FIRST-ORDER PROCESS	192
4.13	CONTROL OF A SECOND-ORDER PROCESS	199
4.14	CONTROL OF A HIGHER-ORDER PROCESS	202
4.15	CONTROL OF A PLAIN INTEGRATING PROCESS	204
4.16	CONTROL OF AN INVERSE RESPONSE PROCESS	206
4.17	MOTION CONTROL OF A MECHANICAL SYSTEM	208
4.18	CONTROL OF AN UNSTABLE PROCESS	210
4.19	FEEDBACK CONTROLLERS : A SUMMARY	212
4.20	SUMMARY	214
5	Design of Control Systems	215
5.1	PERFORMANCE CRITERIA	215
5.2	SPECIFICATIONS FOR A GOOD CONTROLLER TUNING	217
5.3	REVIEW OF CONVENTIONAL CONTROLLER EFFECTS	218
5.4	A PROCEDURE FOR ON-LINE TUNING	221
5.5	DIRECT ANALYTICAL SYNTHESIS OF CONTROLLERS	223
5.6	ANALYTICAL DESIGN VIA POLE-PLACEMENT	226
5.7	DESIGN RULES FOR CONVENTIONAL CONTROLLERS	236
5.8	BALANCED TUNING	241
5.9	A COMPARATIVE ANALYSIS OF VARIOUS DESIGNS	243
5.10	OPTIMIZATION METHODS FOR TUNING	245
5.11	REMARKS WITH REGARD TO CONTROLLER TUNING	249
5.12	AN EXAMPLE OF INDUSTRIAL PI CONTROL	254
5.13	SUMMARY	256
6	Control Systems in Practice	258
6.1	INTRODUCTION	258
6.2	PID CONTROLLER VS. PI CONTROLLER	260
6.3	A RESUME OF STABILITY ANALYSIS	261
6.4	REALIZATION OF PI AND PID CONTROLLERS	264
6.5	2-DOF CONTROLLERS VS. 1-DOF CONTROLLERS	265
6.6	DEALING WITH NONLINEARITIES	267
6.7	CONTROLLER PARAMETER SCHEDULING	269
6.8	DIGITAL CONTROLLERS	272
6.9	FEEDFORWARD CONTROL	276
6.10	CASCADE CONTROL	282
6.11	RATIO CONTROL	293
6.12	OVERRIDE CONTROL	295
6.13	SELECTIVE CONTROL	297
6.14	INTERNAL MODEL CONTROL	298
6.15	DEAD TIME COMPENSATION VIA SMITH PREDICTOR	303
6.16	CONTROL OF CHAOS	304
6.17	MULTIVARIABLE CONTROL SYSTEMS	305
6.18	MONITORING OF CONTROL SYSTEM PERFORMANCE	315
6.19	SUMMARY	320
7	Analysis in the Frequency Domain	321
7.1	INTRODUCTION	321
7.2	FREQUENCY RESPONSE OF A SYSTEM	322
7.3	PROPERTIES OF THE FREQUENCY RESPONSE	324
7.4	BODE PLOTS	326
7.5	NYQUIST PLOTS	331
7.6	NYQUIST STABILITY CRITERION	333
7.7	ROBUSTNESS OF THE CONTROL SYSTEM	338
7.8	SUMMARY	339

8 Modern Theory at a Glance **340**

8.1 INTRODUCTION 340

8.2 OPTIMAL CONTROL 341

8.3 CONTROLLER DESIGN BY POLE PLACEMENT 342

8.4 MODEL PREDICTIVE CONTROL 343

8.5 ALGEBRAIC CONSEQUENCES OF CONTROL SYSTEMS 344

8.6 SUMMARY 345

9 Logic Control **346**

9.1 INTRODUCTION 346

9.2 A LOGICAL OPERATOR 347

9.3 BASIC LOGICAL OPERATORS 348

9.4 COMBINED LOGICAL FUNCTIONS 351

9.5 PRACTICAL DESIGN 355

9.6 PROGRAMMABLE LOGIC CONTROLLERS (PLCs) 357

9.7 SEQUENTIAL LOGIC 361

9.8 SEQUENTIAL LOGIC IN PRACTICAL DESIGN 363

9.9 SUMMARY 364
