Preface	3
---------------	---

INTRODUCTION

International System of units, physical quantities, scalars and vectors	5
---	---

1. MECHANICS

1.1. Kinematics	11
Motion, position, displacement, distance, velocity, speed, acceleration, uniform motion, uniformly accelerated motion	
1.2. Dynamics	15
Force, force and motion, Newton's Laws of motion, gravitational force, falling motion, projectile motion, uniform circular motion, friction	
1.3. Work and Energy	23
Work, power, efficiency, mechanical energy, kinetic energy, gravitational potential energy, conservation of mechanical energy	
1.4. System of Particles	27
Centre of mass, linear momentum, Newton's Second Law for system of particles, conservation of linear momentum	
1.5. Rotational Motion of a Rigid Body	28
Rigid body, angular quantities, rotation with constant angular acceleration, rotational kinetic energy, rotational inertia, torque, angular momentum, Newton's Second Law for rotation, analogy between translation and rotational motion	
1.6. Statics	36
Condition for equilibrium of body	
1.7. Elasticity	38
Deformation, elastic and plastic behaviour, stress, strain, Young's modulus, Hook's Law	

2. MECHANICS OF FLUIDS

2.1. Fluids at Rest	40
Pressure, Pascal's Principle, hydraulic press, hydrostatic pressure, Archimedes' Principle, flotation	
2.2. Fluids in Motion	44
Streamlines, ideal fluids, Equation of Continuity, Bernoulli's Equation, applications of Bernoulli's Equation, real fluids	

3. THERMODYNAMICS

3.1. Temperature	50
Temperature scales, thermal expansions of solids and liquids, measuring temperature	
3.2. Heat	54
Measuring heat, internal energy, absorption of heat by substance, heat capacity, latent heats, calorimetric equation, phase changes	
3.3. Gases	56
Properties of gases, gas equation, mole, Avogadro's number, Kinetic Theory of Gases, First Law of Thermodynamics	

4. ELECTRICITY AND MAGNETISM	
4.1. Electrostatics	62
Electric charge, Coulomb's Law, electric field, electric potential, voltage, capacitance, capacitors, dielectrics	
4.2. Electric Current	65
Charge in motion, conductors, electric current, resistance, resistors in series and in parallel, Ohm's Law, electric energy and power	
4.3. Electric Circuit	66
Source of potential difference, electromotive force, Kirchhoff's laws, measuring electric current and voltage, rheostat, potentiometer, Wheatstone bridge	
4.4. Semiconductors	73
4.5. Magnetic Field	76
Magnetic induction vector, magnetic force on conductor, electric charge in magnetic field, mass spectrometer, current and magnetic field, Biot-Savart Law, two parallel conductors	
4.6. Alternating Current	82
Electromagnetic induction, inductance, alternating current, generators circuits with alternating current, transformer, <i>RLC</i> circuits	
5. OSCILLATIONS AND WAVES	
Harmonic motion, wave motion	
5.1. Acoustics	91
Sound waves, frequency, wavelength, speed of sound, intensity of sound, sound intensity level, Doppler Effect	
5.2. Optics	93
Electromagnetic radiation, visible light	
5.2.1. Wave Optics	94
Interference, diffraction polarization	
5.2.2 Geometrical Optics	98
Reflection and refraction of light, formation of image by mirrors and lenses, human eye, defects of eye, optical instruments	
5.3. Photometry	109
Luminous intensity, illumination	
6. MODERN PHYSICS	
6.1. Quantum Physics	110
Planck's quantum hypothesis, photoelectric effect, proton, wave particle duality, X-rays, Bohr's hydrogen atom, line spectra, spectroscopy	
6.2. Nuclear Physics	116
Isotopes, radioactivity, radioactive decay, α , β and γ radiation, half-life, mass defect, nuclear fission, nuclear fusion	
6.3. Special Theory of Relativity	122
Time dilation, length contraction, velocity transformation, mass-energy relation, General Theory of Relativity	
Index	123
