## **PART I. STARS, PLANETS, AND LIFE** 1

---

### **1 | THE SIZE AND SCALE OF THE UNIVERSE** 3

#### **1 Scientific notation review** 3

Writing numbers in scientific notation.

#### **2 How long is a year?** 3

Calculating the number of seconds in a year.

#### **3 How fast does light travel?** 3

Calculating the number of kilometers in a light-year.

#### **4 Arcseconds in a radian** 3

Calculating the number of arcseconds in a radian, a number used whenever applying the small-angle formula.

#### **5 How far is a parsec?** 3

Converting from parsecs to light-years and astronomical units.

#### **6 Looking out in space and back in time** 4

Exploring the relationship between distance and time when traveling at the speed of light.

<b>7</b>	<b>Looking at Neptune</b>	<b>4</b>
	The time for light to travel from Earth to the planet Neptune depends on where it and we are in our respective orbits.	
<b>8</b>	<b>Far, far away; long, long ago</b>	<b>5</b>
	There is an intrinsic time delay in communicating with spacecraft elsewhere in the solar system or elsewhere in the Milky Way galaxy.	
<b>9</b>	<b>Interstellar travel</b>	<b>6</b>
	Calculating how long it takes to travel various distances at various speeds.	
<b>10</b>	<b>Traveling to the stars</b>	<b>6</b>
	Calculating how long it would take to travel to the nearest stars.	
<b>11</b>	<b>Earth's atmosphere</b>	<b>7</b>
	Calculating the mass of the air in Earth's atmosphere, and comparing it with the mass of the oceans.	
<b>2</b>	<b>FROM THE DAY AND NIGHT SKY TO PLANETARY ORBITS</b>	<b>8</b>
<b>12</b>	<b>Movements of the Sun, Moon, and stars</b>	<b>8</b>
	Exploring when and where one can see various celestial bodies.	
<b>13</b>	<b>Looking at the Moon</b>	<b>8</b>
	There is a lot you can infer by just looking at the Moon!	
<b>14</b>	<b>Rising and setting</b>	<b>9</b>
	Questions about when various celestial bodies rise and set.	
<b>15</b>	<b>Objects in the sky</b>	<b>9</b>
	More questions about what you can learn by looking at objects in the sky.	
<b>16</b>	<b>Aristarchus and the Moon</b>	<b>10</b>
	Determining the relative distance to the Moon and the Sun using high-school geometry.	
<b>17</b>	<b>The distance to Mars</b>	<b>11</b>
	Using parallax to determine how far away Mars is.	
<b>18</b>	<b>The distance to the Moon</b>	<b>11</b>
	Using parallax to determine how far away the Moon is.	
<b>19</b>	<b>Masses and densities in the solar system</b>	<b>11</b>
	Calculating the density of the Sun and of the solar system.	

<b>3   NEWTON'S LAWS</b>	<b>13</b>
<b>20 Forces on a book</b>	<b>13</b>
Using Newton's laws to understand the forces on a book resting on a table.	
<b>21 Going ballistic</b>	<b>13</b>
Calculating the speed of a satellite in low Earth orbit.	
<b>22 Escaping Earth's gravity?</b>	<b>14</b>
Calculating the distance at which the gravitational force from Earth and the Moon are equal.	
<b>23 Geosynchronous orbits</b>	<b>14</b>
Calculating the radius of the orbit around Earth that is synchronized with Earth's rotation.	
<b>24 Centripetal acceleration and kinetic energy in Earth orbit</b>	<b>14</b>
Calculating the damage done by a collision with space debris.	
<b>25 Centripetal acceleration of the Moon and the law of universal gravitation</b>	<b>15</b>
Comparing the acceleration of the Moon in its orbit to that of a dropped apple at Earth's surface.	
<b>26 Kepler at Jupiter</b>	<b>16</b>
Applying Kepler's laws to the orbits of Jupiter's moons.	
<b>27 Neptune and Pluto</b>	<b>17</b>
Calculating the relationship of the orbits of Neptune and Pluto.	
<b>28 Is there an asteroid with our name on it?</b>	<b>17</b>
How to deflect an asteroid that is on a collision course with Earth.	
<b>29 Halley's comet and the limits of Kepler's third law</b>	<b>18</b>
Applying Kepler's third law to the orbit of Halley's comet.	
<b>30 You cannot touch without being touched</b>	<b>19</b>
The motion of the Sun due to the gravitational pull of Jupiter.	
<b>31 Aristotle and Copernicus</b>	<b>19</b>
An essay about ancient and modern views of the heavens.	
<b>4-6   HOW STARS RADIATE ENERGY</b>	<b>20</b>
<b>32 Distant supernovae</b>	<b>20</b>
Using the inverse square law relating brightness and luminosity.	

<b>33</b>	<b>Spacecraft solar power</b>	20
	Calculating how much power solar panels on a spacecraft can generate.	
<b>34</b>	<b>You glow!</b>	21
	Calculating how much blackbody radiation our bodies give off.	
<b>35</b>	<b>Tiny angles</b>	21
	Understanding the relationship between motions in space and in the plane of the sky.	
<b>36</b>	<b>Thinking about parallax</b>	22
	How nearby stars appear to move in the sky relative to more distant stars, due to the Earth's motion around the Sun.	
<b>37</b>	<b>Really small angles and distant stars</b>	22
	The Gaia spacecraft's ability to measure parallax of distant stars.	
<b>38</b>	<b>Brightness, distance, and luminosity</b>	23
	Exploring the relationship between brightness and luminosity of various stars.	
<b>39</b>	<b>Comparing stars</b>	23
	Relating the luminosity, radius, surface temperature, and distance of stars.	
<b>40</b>	<b>Hot and radiant</b>	24
	Exploring the relation between the properties of stars radiating as blackbodies.	
<b>41</b>	<b>A white dwarf star</b>	24
	Calculating the distance and size of a white dwarf star.	
<b>42</b>	<b>Orbiting a white dwarf</b>	24
	Using Kepler's third law to determine the orbit around a white dwarf star.	
<b>43</b>	<b>Hydrogen absorbs</b>	25
	Using the spectrum of an F star to understand the energy levels of a hydrogen atom. A challenge problem.	
<b>7-8</b>	<b>THE LIVES AND DEATHS OF STARS</b>	27
<b>44</b>	<b>The shining Sun</b>	27
	Calculating the rate at which hydrogen fuses to helium in the core of the Sun.	

<b>45</b>	<b>Thermonuclear fusion and the Heisenberg uncertainty principle</b>	<b>27</b>
	Using quantum mechanics to determine the conditions under which thermonuclear fusion can take place in the core of a star. A challenge problem.	
<b>46</b>	<b>Properties of white dwarfs</b>	<b>29</b>
	Using direct observations of a white dwarf to determine its radius and density. A challenge problem.	
<b>47</b>	<b>Squeezing into a white dwarf</b>	<b>30</b>
	Determining how far apart the nuclei in a white dwarf star are.	
<b>48</b>	<b>Flashing in the night</b>	<b>30</b>
	Determining whether the gravity of a pulsar is adequate to hold it together as it spins.	
<b>49</b>	<b>Life on a neutron star</b>	<b>31</b>
	Calculating the effects of the extreme gravity of a neutron star.	
<b>50</b>	<b>Distance to a supernova</b>	<b>31</b>
	Watching a supernova remnant expand, and using this to determine how far away it is.	
<b>51</b>	<b>Supernovae are energetic!</b>	<b>32</b>
	Putting the luminosity of a supernova in context.	
<b>52</b>	<b>Supernovae are dangerous!</b>	<b>33</b>
	What would happen if a supernova were to explode within a few hundred light-years of Earth?	
<b>53</b>	<b>Neutrinos coursing through us</b>	<b>33</b>
	Calculating the flux and detectability of neutrinos emitted during a supernova explosion.	
<b>54</b>	<b>A really big explosion</b>	<b>34</b>
	Calculating the energy associated with a gamma-ray burst.	
<b>55</b>	<b>Kaboom!</b>	<b>36</b>
	Calculating the properties of one of the most powerful gamma-ray bursts ever seen.	
<b>56</b>	<b>Compact star</b>	<b>36</b>
	Calculating the distance between nuclei in a neutron star.	
<b>57</b>	<b>Orbiting a neutron star</b>	<b>37</b>
	Applying Kepler's third law for an orbit around a neutron star.	

<b>58</b>	<b>The Hertzsprung-Russell diagram</b>	<b>37</b>
	An essay about the relationship between surface temperature and luminosity of stars.	
<b>9  </b>	<b>WHY PLUTO IS NOT A PLANET</b>	<b>38</b>
<b>59</b>	<b>A rival to Pluto?</b>	<b>38</b>
	Calculating the properties of a large Kuiper Belt Object in the outer solar system, working directly from observations. A challenge problem.	
<b>60</b>	<b>Another Pluto rival</b>	<b>41</b>
	Exploring the properties of another large body in the outer solar system.	
<b>61</b>	<b>Effects of a planet on its parent star</b>	<b>43</b>
	Using observations of the motion of a star under the gravitational influence of an orbiting planet to infer the properties of that planet.	
<b>62</b>	<b>Catastrophic asteroid impacts</b>	<b>44</b>
	How the impact of an asteroid on the early Earth may have evaporated the oceans.	
<b>63</b>	<b>Tearing up planets</b>	<b>45</b>
	Calculating the tidal force of a planet on an orbiting moon. A challenge problem.	
<b>10  </b>	<b>THE SEARCH FOR LIFE IN THE GALAXY</b>	<b>47</b>
<b>64</b>	<b>Planetary orbits and temperatures</b>	<b>47</b>
	Calculating the orbits and equilibrium temperatures of planets orbiting other stars.	
<b>65</b>	<b>Water on other planets?</b>	<b>47</b>
	Determining whether liquid water can exist on the surface of planets orbiting other stars.	
<b>66</b>	<b>Oceans in the solar system</b>	<b>48</b>
	Exploring the properties of oceans on Earth, Mars and Europa.	
<b>67</b>	<b>Could photosynthetic life survive in Europa's ocean?</b>	<b>49</b>
	Determining how much life the sunlight that impinges on Europa could support.	
<b>68</b>	<b>An essay on liquid water</b>	<b>50</b>
	An essay describing the conditions under which liquid water, necessary for life as we know it, exists.	

<b>11–13   THE MILKY WAY AND THE UNIVERSE OF GALAXIES</b>	<b>53</b>
<b>69 How many stars are there?</b>	<b>53</b>
Calculating the number of stars in the observable universe.	
<b>70 The distance between stars</b>	<b>54</b>
Putting the distance between stars into perspective.	
<b>71 The emptiness of space</b>	<b>54</b>
Calculating the density of the Milky Way and of the universe as a whole.	
<b>72 Squeezing the Milky Way</b>	<b>54</b>
What would happen if you brought all the stars in the Milky Way into one big ball?	
<b>73 A star is born</b>	<b>55</b>
How much interstellar gas do you need to bring together to make a star?	
<b>74 A massive black hole in the center of the Milky Way</b>	<b>55</b>
Calculating the mass of the black hole at the center of our Galaxy, working directly from observations.	
<b>75 Supernovae and the Galaxy</b>	<b>55</b>
How many supernovae are needed to create the heavy elements in the Milky Way?	
<b>76 Dark matter halos</b>	<b>56</b>
Calculating the mass of the Milky Way from its observed rotation.	
<b>77 Orbiting Galaxy</b>	<b>57</b>
The orbit of the Large Magellanic Cloud around the Milky Way, and what it says about the mass of our Galaxy.	
<b>78 Detecting dark matter</b>	<b>57</b>
Calculating how many dark matter particles there are all around us, and how we plan to detect them. A challenge problem.	
<b>79 Rotating galaxies</b>	<b>60</b>
Determining whether we can see the rotation of a galaxy on the sky.	
<b>80 Measuring the distance to a rotating galaxy</b>	<b>60</b>
Using the apparent motion of stars in a galaxy in the plane of the sky and along the line of sight to determine its distance.	

<b>14   THE EXPANSION OF THE UNIVERSE</b>	<b>61</b>
<b>81 The Hubble Constant</b>	<b>61</b>
Measuring the expansion rate of the universe from the measured properties of galaxies.	
<b>82 Which expands faster: The universe or the Atlantic Ocean?</b>	<b>63</b>
The answer may surprise you.	
<b>83 The third dimension in astronomy</b>	<b>63</b>
An essay about how we measure distances in the universe.	
<b>84 Will the universe expand forever?</b>	<b>63</b>
The relationship between the density of the universe and its future fate. A challenge problem.	
<b>85 The motion of the Local Group through space</b>	<b>64</b>
Calculating the gravitational pull from the Virgo galaxy supercluster on our Local Group of galaxies. A challenge problem.	
<b>15–16   THE EARLY UNIVERSE AND QUASARS</b>	<b>67</b>
<b>86 Neutrinos in the early universe</b>	<b>67</b>
Calculating just how numerous the neutrinos produced soon after the Big Bang are.	
<b>87 No center to the universe</b>	<b>68</b>
A brief essay explaining why the expanding universe has no center.	
<b>88 Luminous quasars</b>	<b>68</b>
Calculating the properties of quasars, and the supermassive black holes that power them.	
<b>89 The origin of the elements</b>	<b>68</b>
An essay describing how different elements are formed in the universe.	
<b>PART III. EINSTEIN AND THE UNIVERSE</b>	<b>69</b>
<hr/>	
<b>17–18   EINSTEIN'S ROAD TO SPECIAL RELATIVITY</b>	<b>71</b>
<b>90 Lorentz factor</b>	<b>71</b>
Exploring the special relativistic relation between lengths as seen in different reference frames.	

<b>91 Speedy muons</b>	72
How special relativity is important in understanding the formation and detection of muons created in the upper atmosphere.	
<b>92 Energetic cosmic rays</b>	73
Determining relativistic effects for one of the highest-energy particles ever seen.	
<b>93 The <i>Titanic</i> is moving</b>	73
Playing relativistic games with the great ship <i>Titanic</i> .	
<b>94 Aging astronaut</b>	74
Understanding how the relativistic effects of moving an astronaut at close to the speed of light.	
<b>95 Reunions</b>	74
How two friends can differ on the passage of time.	
<b>96 Traveling to another star</b>	74
Calculating how time ticks slower for an astronaut traveling at close to the speed of light.	
<b>97 Clocks on Earth are slow</b>	74
Calculating the difference between a clock in orbit around the Sun and one standing still.	
<b>98 Antimatter!</b>	74
Should you run if trucks made of matter and antimatter collide with one another?	
<b>99 Energy in a glass of water</b>	75
Calculating how much energy could be extracted from the fusion of the hydrogen in a glass of water.	
<b>100 Motion through spacetime</b>	75
Drawing the path of the Earth's orbit around the Sun in spacetime.	
<b>101 Can you go faster than the speed of light?</b>	75
Why the postulates of special relativity do not allow travel faster than the speed of light.	
<b>102 Short questions in special relativity</b>	76
Quick questions which can be answered in a few sentences.	

<b>19   EINSTEIN'S GENERAL THEORY OF RELATIVITY</b>	<b>77</b>
<b>103 Tin Can Land</b>	<b>77</b>
Exploring the nature of geodesics on a familiar two-dimensional surface.	
<b>104 Negative mass</b>	<b>78</b>
Would a dropped ball of negative mass fall down?	
<b>105 Aging in orbit</b>	<b>79</b>
Exploring special and general relativistic effects on your clock while in orbit. A challenge problem.	
<b>106 Short questions in general relativity</b>	<b>80</b>
Quick questions that can be answered in a few sentences.	
<b>20   BLACK HOLES</b>	<b>82</b>
<b>107 A black hole at the center of the Milky Way</b>	<b>82</b>
Calculating the properties of the supermassive black hole at the center of our Galaxy.	
<b>108 Quick questions about black holes</b>	<b>82</b>
Short questions that can be answered in a few sentences.	
<b>109 Big black holes</b>	<b>83</b>
Exploring the properties of the biggest black holes in the universe.	
<b>110 A Hitchhiker's challenge</b>	<b>83</b>
<i>The Hitchhiker's Guide to the Galaxy</i> inspires a problem on black holes. A challenge problem.	
<b>111 Colliding black holes!</b>	<b>84</b>
Measurements of gravitational waves from a pair of merging black holes allows us to determine their properties.	
<b>112 Extracting energy from a pair of black holes</b>	<b>85</b>
Using ideas from Stephen Hawking to determine how much energy can be released when black holes collide.	
<b>21   COSMIC STRINGS, WORMHOLES, AND TIME TRAVEL</b>	<b>87</b>
<b>113 Quick questions about time travel</b>	<b>87</b>
Short questions that can be answered in a few sentences.	

<b>114 Time travel tennis</b>	<b>87</b>
Playing a tennis game with yourself with the help of time travel. A challenge problem.	
<b>115 Science fiction</b>	<b>89</b>
Writing a science fiction story that uses concepts from astrophysics: the challenge is to make it as scientifically realistic as possible.	
<b>22   THE SHAPE OF THE UNIVERSE AND THE BIG BANG</b>	<b>91</b>
<b>116 Mapping the universe</b>	<b>91</b>
Ranking the distance of various astronomical objects from the Earth.	
<b>117 Gnomonic projections</b>	<b>91</b>
Exploring the geometry of an unusual mapping of the night sky onto a flat piece of paper.	
<b>118 Doctor Who in Flatland</b>	<b>95</b>
Using concepts from general relativity to understand the nature of Dr. Who's Tardis.	
<b>119 Quick questions about the shape of the universe</b>	<b>96</b>
Short questions that can be answered in a few sentences.	
<b>23   INFLATION AND RECENT DEVELOPMENTS IN COSMOLOGY</b>	<b>97</b>
<b>120 The earliest possible time</b>	<b>97</b>
Calculating it using both general relativity and quantum mechanics.	
<b>121 The worst approximation in all of physics</b>	<b>98</b>
Can the Planck density give us a reasonable estimate for the density of dark energy? Hint: no.	
<b>122 Not a blunder after all?</b>	<b>99</b>
Describing the relationship between Einstein's desire for a static universe and the accelerated expansion we now observe.	
<b>123 The Big Bang</b>	<b>99</b>
An essay describing the empirical evidence that the universe started in a Big Bang.	

<b>24   OUR FUTURE IN THE UNIVERSE</b>	100
<b>124 Getting to Mars</b>	100
Calculating the most efficient orbit to get from Earth to Mars.	
<b>125 Interstellar travel: Solar sails</b>	101
Using the pressure of light from the Sun to propel a spacecraft for interstellar travel.	
<b>126 Copernican arguments</b>	102
Applied to time.	
<b>127 Copernicus in action</b>	102
An essay about Copernican arguments in our understanding of the structure of the universe and our place in it.	
<b>128 Quick questions for our future in the universe</b>	103
Short questions that can be answered in a few sentences.	
<b>129 Directed panspermia</b>	103
Exploring how humankind could colonize the Milky Way with robotic probes.	
<i>Useful Numbers and Equations</i>	107
<i>Solutions</i>	113
