On the Cover

This month's cover highlights the article "A Century With Craniopagus Twin Separation Surgeries: Nihilism to Optimism." Less than 100 surgical separation attempts have been made in last 100 years on craniopagus twins. Perioperative pearls for total vertical joining in craniopagus twins with shared circular sinus are discussed. First successful Indian craniopagus twin separation surgery on 27-month-old type 3 total vertical craniopagus twins wherein both twins could be separated by a team of 125 doctors from All India Institute of Medical Sciences, India highlights importance of structured planning, usage of modern neurosurgical tools, and teamwork in Craniopagus separations. A carefully orchestrated team approach is essential to progress from nihilism to optimism in this challenging surgery. Read more on p. 27.
