Contents

Preface *page* ix

1 A General Framework for Community Ecology 1

Communities 1

A Grounding in Reality 3

Composition and Causal Factors Can Both Be Mapped 8

The Language of Samples and Sample Units 9

More General Principles: Assembly and Response 10

The Study of Pattern Is Not the Study of Community Assembly 13

Foundations of Community Ecology Laid by Raunkiaer 15

A General Framework 18

The Basic Elements of Community Ecology 19

Summary 34

Key Points of the Chapter 39

2 Filters 41

The Power of Filters 41

Drought Acts as a Filter 43

Cold Acts as a Filter 47

Hypoxia Acts as a Filter 49

Salinity Acts as a Filter 55

Herbivores Act as Filters 57

Wildfires Act as Filters 60

Predators as Filters in Frog Communities 61

Predation as a Filter 63

How Many Filters Do We Need? 65

More on Experiments and Filters 69

Conclusion: The Ubiquity and Power of Filters 74
Key Points of the Chapter 75

3 **Species Pools** 76
The List of Parts 76
Types of Pools 81
Some Theory about Pools and Communities 88
Rates of Arrival and Departure in the Community 91
Some Empirical Relationships Observed in Real Communities 97
Experimental Manipulation of Immigration and Establishment from Pools 102
Invasive Species and the Potential Species Pool 104
Approaches to Measuring Pools 105
More on Older Lists and Their Utility in Documenting Species Pools 114
Looking Ahead 120
Key Points of the Chapter 124

4 **Traits** 125
Naming Species 125
A Biological Paradox: Two Systems for One Reality 131
Functional Classifications: Some Historical Context 133
Morphological Traits in Birds: Bills Are Fundamental 135
Plant Functional Traits 139
The Fundamental Global Trait: Leaf Economics 144
Getting the Water to the Leaves: Traits for Water Conduction 147
Traits and Trait Matrices 149
Traits, Environments and Applications 163
Key Points of the Chapter 164

5 **Trait–Environment Interactions** 165
The Power of Filters 165

Overview: Quantifying Trait–Environment Relationships 167
Static Abundance-Based Approaches 169
More on the Fourth Corner Problem 171
An Example from a Wetland 178
Dynamic Fitness-Based Approaches 183
Conclusion 186
Key Points of the Chapter 189

6 Functional Groups 190
Furniture Assembly 190
Functional Classification for Ecological Prediction 195
Functional Groups in Plants 197
Functional Groups in Birds 207
Functional Groups in Insects 209
Functional Types of Fish 210
Functional Types of Mammals 218
Functional Types of Fungi 218
Some Methodological Issues 221
On the Reality of Functional Groups 224
The Underlying Causes of Functional Groups 226
Functional Groups, Trait Matrices and Ecological Assembly 228
Key Points of the Chapter 230

7 Predictive Models of Community Assembly 232
Prediction in Community Ecology 232
Community Assembly by Trait Selection 233
How Many Traits Are Enough? 243
The Traitspace Model of Environmental Filtering 244
Applying the Traitspace Model to Conifer Forests in Southwestern North America 253
Applying Both CATS and Traitspace to a Kettlehole Wetland 256

Relaxing the Assumption of a Single Optimal Trait Value Using Traitspace 257
Some Concluding Remarks on Two Models for Community Assembly 260
Key Points of the Chapter 263

8 **Prospects and Possibilities** 265
Logical Structure for Community Ecology 265
Species, Functional Groups and Community Assembly 266
The Canonical Model for Commonness and Rarity: Lessons for Community Assembly 283
Response Rules and Inertia in Community Assembly (Time Dependence) 306
The Role of Causal Factors in Ecological Communities and Restoration 311
Key Points of the Chapter 319
