

CONTENTS

INTRODUCTION	7
1. THE PURPOSE OF THE WORK	9
2. A SURVEY OF THE PRESENT STATE OF PROBLEM	10
2.1 Specifying some principal terms and present methods of biomass quantification	10
2.2 Determining the content of chemical elements in the samples	11
2.3 Survey of literature	12
2.4 Natural area	15
2.5 Present distribution of black locust in Slovakia	17
3. MATERIAL AND METHODS	
3.1 Permanent Research Areas	20
3.2 Selection of sample trees for total biomass quantification	22
3.3 The aboveground biomass quantification	22
3.4 The underground biomass quantification	23
3.5 Non-destructive way of biomass quantification	23
3.6 Water content and wood density quantification	24
3.7 Leaf area index (LAI) and leaf variability	24
3.8 Determining the content of selected chemical elements	25
4. RESULTS	26
4.1 Basic data about PRAs	26
4.2 Aboveground biomass	27
4.2.1 Permanent Research Area A_1	27
4.2.2 Permanent Research Area A_2	28
4.2.3 Permanent Research Area A_3	29
4.3 Underground biomass	29
4.3.1 Permanent Research Area A_1	29
4.3.2 Permanent Research Area A_2	30
4.3.3 Permanent Research Area A_3	31
4.4 Total biomass	32
4.5 Equations of biomass calculation	34
4.6 Water content and wood density	36
4.7 Leaf area index (LAI) and leaf variability	37
4.8 Content of selected chemical elements	39
5. DISCUSSION	44

6. SUMMARY	48
