1	Operations	1
1.1	Operations and Points	1
1.2	Operations and Functions	4
1.3	Operations and Operators	8
1.4	An Aide Mémoire	10
1.5	Problems	10
	References	10
2	Function Spaces and Matrices	11
2.1	Function Spaces	11
2.2	Linear Operators and Transformation Matrices	12
2.3	Unitary Matrices	14
2.4	Time Reversal as an Anti-linear Operator	16
2.5	Problems	19
	References	19
3	Groups	21
3.1	The Symmetry of Ammonia	21
3.2	The Group Structure	24
3.3	Some Special Groups	27
3.4	Subgroups	29
3.5	Cosets	30
3.6	Classes	32
3.7	Overview of the Point Groups	34
	Spherical Symmetry and the Platonic Solids	34
	Cylindrical Symmetries	40
3.8	Rotational Groups and Chiral Molecules	44
3.9	Applications: Magnetic and Electric Fields	46
3.10	Problems	47
	References	48

4	Representations	51
4.1	Symmetry-Adapted Linear Combinations of Hydrogen Orbitals in Ammonia	52
4.2	Character Theorems	56
4.3	Character Tables	62
4.4	Matrix Theorem	63
4.5	Projection Operators	64
4.6	Subduction and Induction	69
4.7	Application: The sp^3 Hybridization of Carbon	76
4.8	Application: The Vibrations of UF_6	78
4.9	Application: Hückel Theory	84
	Cyclic Polyenes	85
	Polyhedral Hückel Systems of Equivalent Atoms	91
	Triphenylmethyl Radical and Hidden Symmetry	95
4.10	Problems	99
	References	101
5	What has Quantum Chemistry Got to Do with It?	103
5.1	The Prequantum Era	103
5.2	The Schrödinger Equation	105
5.3	How to Structure a Degenerate Space	107
5.4	The Molecular Symmetry Group	108
5.5	Problems	112
	References	112

6.1	Overlap Integrals	114
6.2	The Coupling of Representations	115
6.3	Symmetry Properties of the Coupling Coefficients	117
6.4	Product Symmetrization and the Pauli Exchange-Symmetry	122
6.5	Matrix Elements and the Wigner–Eckart Theorem	126
6.6	Application: The Jahn–Teller Effect	128
6.7	Application: Pseudo-Jahn–Teller interactions	134
6.8	Application: Linear and Circular Dichroism	138
	Linear Dichroism	139
	Circular Dichroism	144
6.9	Induction Revisited: The Fibre Bundle	148
6.10	Application: Bonding Schemes for Polyhedra	150
	Edge Bonding in Trivalent Polyhedra	155
	Frontier Orbitals in Leapfrog Fullerenes	156
6.11	Problems	159
	References	160
7	Spherical Symmetry and Spins	163
7.1	The Spherical-Symmetry Group	163
7.2	Application: Crystal-Field Potentials	167
7.3	Interactions of a Two-Component Spinor	170

7.4	The Coupling of Spins	173
7.5	Double Groups	175
7.6	Kramers Degeneracy	180
	Time-Reversal Selection Rules	182
7.7	Application: Spin Hamiltonian for the Octahedral Quartet State . .	184
7.8	Problems	189
	References	190
Appendix A Character Tables		191
A.1	Finite Point Groups	192
	C_1 and the Binary Groups C_s, C_i, C_2	192
	The Cyclic Groups C_n ($n = 3, 4, 5, 6, 7, 8$)	192
	The Dihedral Groups D_n ($n = 2, 3, 4, 5, 6$)	194
	The Conical Groups C_{nv} ($n = 2, 3, 4, 5, 6$)	195
	The C_{nh} Groups ($n = 2, 3, 4, 5, 6$)	196
	The Rotation–Reflection Groups S_{2n} ($n = 2, 3, 4$)	197
	The Prismatic Groups D_{nh} ($n = 2, 3, 4, 5, 6, 8$)	198
	The Antiprismatic Groups D_{nd} ($n = 2, 3, 4, 5, 6$)	199
	The Tetrahedral and Cubic Groups	201
	The Icosahedral Groups	202
A.2	Infinite Groups	203
	Cylindrical Symmetry	203
	Spherical Symmetry	204
Appendix B Symmetry Breaking by Uniform Linear Electric and Magnetic Fields		205
B.1	Spherical Groups	205
B.2	Binary and Cylindrical Groups	205
Appendix C Subduction and Induction		207
C.1	Subduction $G \downarrow H$	207
C.2	Induction: $H \uparrow G$	211
Appendix D Canonical-Basis Relationships		215
Appendix E Direct-Product Tables		219
Appendix F Coupling Coefficients		221
Appendix G Spinor Representations		235
G.1	Character Tables	235
G.2	Subduction	237
G.3	Canonical-Basis Relationships	237
G.4	Direct-Product Tables	240
G.5	Coupling Coefficients	241
Solutions to Problems		245
