	<b>Preface</b>	<i>page</i> ix
<b>1</b>	<b>The <math>\lambda</math>-calculus</b>	1
	1A Introduction	1
	1B Term-structure and substitution	5
	1C $\beta$ -reduction	11
	1D $\beta$ -equality	16
<b>2</b>	<b>Combinatory logic</b>	21
	2A Introduction to CL	21
	2B Weak reduction	24
	2C Abstraction in CL	26
	2D Weak equality	29
<b>3</b>	<b>The power of <math>\lambda</math> and combinators</b>	33
	3A Introduction	33
	3B The fixed-point theorem	34
	3C Böhm's theorem	36
	3D The quasi-leftmost-reduction theorem	40
	3E History and interpretation	43
<b>4</b>	<b>Representing the computable functions</b>	47
	4A Introduction	47
	4B Primitive recursive functions	50
	4C Recursive functions	56
	4D Abstract numerals and <b>Z</b>	61
<b>5</b>	<b>The undecidability theorem</b>	63
<b>6</b>	<b>The formal theories <math>\lambda\beta</math> and <math>CL_w</math></b>	69
	6A The definitions of the theories	69
	6B First-order theories	72

6C	Equivalence of theories	73
<b>7</b>	<b>Extensionality in <math>\lambda</math>-calculus</b>	76
7A	Extensional equality	76
7B	$\beta\eta$ -reduction in $\lambda$ -calculus	79
<b>8</b>	<b>Extensionality in combinatory logic</b>	82
8A	Extensional equality	82
8B	Axioms for extensionality in CL	85
8C	Strong reduction	89
<b>9</b>	<b>Correspondence between <math>\lambda</math> and CL</b>	92
9A	Introduction	92
9B	The extensional equalities	95
9C	New abstraction algorithms in CL	100
9D	Combinatory $\beta$ -equality	102
<b>10</b>	<b>Simple typing, Church-style</b>	107
10A	Simple types	107
10B	Typed $\lambda$ -calculus	109
10C	Typed CL	115
<b>11</b>	<b>Simple typing, Curry-style in CL</b>	119
11A	Introduction	119
11B	The system $TA_C^{\rightarrow}$	122
11C	Subject-construction	126
11D	Abstraction	127
11E	Subject-reduction	130
11F	Typable CL-terms	134
11G	Link with Church's approach	137
11H	Principal types	138
11I	Adding new axioms	143
11J	Propositions-as-types and normalization	147
11K	The equality-rule $Eq'$	155
<b>12</b>	<b>Simple typing, Curry-style in <math>\lambda</math></b>	159
12A	The system $TA_\lambda^{\rightarrow}$	159
12B	Basic properties of $TA_\lambda^{\rightarrow}$	165
12C	Typable $\lambda$ -terms	170
12D	Propositions-as-types and normalization	173
12E	The equality-rule $Eq'$	176
<b>13</b>	<b>Generalizations of typing</b>	180
13A	Introduction	180
13B	Dependent function types, introduction	181

13C	Basic generalized typing, Curry-style in $\lambda$	183
13D	Deductive rules to define types	187
13E	Church-style typing in $\lambda$	191
13F	Normalization in PTSs	202
13G	Propositions-as-types	209
13H	PTSs with equality	217
<b>14</b>	<b>Models of CL</b>	<b>220</b>
14A	Applicative structures	220
14B	Combinatory algebras	223
<b>15</b>	<b>Models of <math>\lambda</math>-calculus</b>	<b>229</b>
15A	The definition of $\lambda$ -model	229
15B	Syntax-free definitions	236
15C	General properties of $\lambda$ -models	242
<b>16</b>	<b>Scott's <math>D_\infty</math> and other models</b>	<b>247</b>
16A	Introduction: complete partial orders	247
16B	Continuous functions	252
16C	The construction of $D_\infty$	256
16D	Basic properties of $D_\infty$	261
16E	$D_\infty$ is a $\lambda$ -model	267
16F	Some other models	271
<i>Appendix A1</i>	<b>Bound variables and <math>\alpha</math>-conversion</b>	<b>276</b>
<i>Appendix A2</i>	<b>Confluence proofs</b>	<b>282</b>
<i>Appendix A3</i>	<b>Strong normalization proofs</b>	<b>293</b>
<i>Appendix A4</i>	<b>Care of your pet combinator</b>	<b>305</b>
<i>Appendix A5</i>	<b>Answers to starred exercises</b>	<b>307</b>
<i>References</i>		<b>323</b>
<i>List of symbols</i>		<b>334</b>
<i>Index</i>		<b>337</b>
