Part I Getting Basic Tasks Done 1

1 Prologue: Preparing to Program 3

2 Python as a Basic Calculator 8

3 Python as a Scientific Calculator 27

4 Basic Line and Scatter Plots 52

5 Customized Line and Scatter Plots 88

6 Basic Diagnostic Data Analysis 124

7 Two-Dimensional Diagnostic Data Analysis 176

8 Basic Prognostic Modeling 209

9 Reading In and Writing Out Text Data 261

10 Managing Files, Directories, and Programs 327

Part II Doing More Complex Tasks 353

11 Segue: How to Write Programs 355

12 *n*-Dimensional Diagnostic Data Analysis 365

13 Basic Image Processing 394

14 Contour Plots and Animation 439

15 Handling Missing Data 483

Part III Advanced Programming Concepts 503

16 More Data and Execution Structures 505

17 Classes and Inheritance 536

18 More Ways of Storing Information in Files 570

19 Basic Searching and Sorting 595

20 Recursion 633

Part IV Going from a Program Working to Working Well 655

21 Make It Usable to Others: Documentation and Sphinx 657

22 Make It Fast: Performance 666

23 Make It Correct: Linting and Unit Testing 683

24 Make It Manageable: Version Control and Build Management 693

25 Make It Talk to Other Languages 702

Appendix A List of Units 706

Appendix B Summary of Data Structures 708

Appendix C Contents by Programming Topic 709

Glossary 719
Acronyms and Abbreviations 726
Bibliography 727
Index 729
