1	Introduction	1
1.1	Relevance of Nonlinear System Identification	1
1.1.1	Linear or Nonlinear?	2
1.1.2	Prediction	2
1.1.3	Simulation	4
1.1.4	Optimization	4
1.1.5	Analysis	5
1.1.6	Control	5
1.1.7	Fault Detection	6
1.2	Views on Nonlinear System Identification	6
1.3	Tasks in Nonlinear System Identification	7
1.3.1	Choice of the Model Inputs	9
1.3.2	Choice of the Excitation Signals	11
1.3.3	Choice of the Model Architecture	11
1.3.4	Choice of the Dynamics Representation	12
1.3.5	Choice of the Model Order	13
1.3.6	Choice of the Model Structure and Complexity	13
1.3.7	Choice of the Model Parameters	14
1.3.8	Model Validation	14
1.3.9	The Role of Fiddle Parameters	15
1.4	White Box, Black Box, and Gray Box Models	17
1.5	Outline of the Book and Some Reading Suggestions	18
1.6	Terminology	20

Part I Optimization

2	Introduction to Optimization	23
2.1	Overview of Optimization Techniques	25
2.2	Kangaroos	25

2.3	Loss Functions for Supervised Methods	28
2.3.1	Maximum Likelihood Method	30
2.3.2	Maximum A Posteriori and Bayes Method	32
2.4	Loss Functions for Unsupervised Methods	34
3	Linear Optimization	35
3.1	Least Squares (LS)	37
3.1.1	Covariance Matrix of the Parameter Estimate	45
3.1.2	Errorbars	47
3.1.3	Orthogonal Regressors	50
3.1.4	Regularization/Ridge Regression	51
3.1.5	Ridge Regression: Alternative Formulation	57
3.1.6	L_1 Regularization	60
3.1.7	Noise Assumptions	61
3.1.8	Weighted Least Squares (WLS)	63
3.1.9	Robust Regression	65
3.1.10	Least Squares with Equality Constraints	66
3.1.11	Smoothing Kernels	67
3.1.12	Effective Number of Parameters	70
3.1.13	L_2 Boosting	71
3.2	Recursive Least Squares (RLS)	74
3.2.1	Reducing the Computational Complexity	75
3.2.2	Tracking Time-Variant Processes	77
3.2.3	Relationship Between the RLS and the Kalman Filter	78
3.3	Linear Optimization with Inequality Constraints	79
3.4	Subset Selection	80
3.4.1	Methods for Subset Selection	81
3.4.2	Orthogonal Least Squares (OLS) for Forward Selection	85
3.4.3	Ridge Regression or Subset Selection?	89
3.5	Summary	90
3.6	Problems	91
4	Nonlinear Local Optimization	93
4.1	Batch and Sample Adaptation	95
4.1.1	Mini-Batch Adaptation	97
4.1.2	Sample Adaptation	97
4.2	Initial Parameters	99
4.3	Direct Search Algorithms	101
4.3.1	Simplex Search Method	101
4.3.2	Hooke-Jeeves Method	104
4.4	General Gradient-Based Algorithms	105
4.4.1	Line Search	106
4.4.2	Finite Difference Techniques	108
4.4.3	Steepest Descent	109

4.4.4	Newton's Method	111
4.4.5	Quasi-Newton Methods	113
4.4.6	Conjugate Gradient Methods	115
4.5	Nonlinear Least Squares Problems	117
4.5.1	Gauss-Newton Method	119
4.5.2	Levenberg-Marquardt Method	121
4.6	Constrained Nonlinear Optimization	122
4.7	Summary	126
4.8	Problems	128
5	Nonlinear Global Optimization	129
5.1	Simulated Annealing (SA)	132
5.2	Evolutionary Algorithms (EA)	136
5.2.1	Evolution Strategies (ES)	139
5.2.2	Genetic Algorithms (GA)	143
5.2.3	Genetic Programming (GP)	147
5.3	Branch and Bound (B&B)	149
5.4	Tabu Search (TS)	151
5.5	Summary	151
5.6	Problems	152
6	Unsupervised Learning Techniques	153
6.1	Principal Component Analysis (PCA)	155
6.2	Clustering Techniques	158
6.2.1	<i>k</i> -Means Algorithm	160
6.2.2	Fuzzy C-Means (FCM) Algorithm	163
6.2.3	Gustafson-Kessel Algorithm	165
6.2.4	Kohonen's Self-Organizing Map (SOM)	166
6.2.5	Neural Gas Network	169
6.2.6	Adaptive Resonance Theory (ART) Network	170
6.2.7	Incorporating Information About the Output	171
6.3	Summary	172
6.4	Problems	173
7	Model Complexity Optimization	175
7.1	Introduction	176
7.2	Bias/Variance Tradeoff	177
7.2.1	Bias Error	178
7.2.2	Variance Error	180
7.2.3	Tradeoff	183
7.3	Evaluating the Test Error and Alternatives	190
7.3.1	Training, Validation, and Test Data	191
7.3.2	Cross-Validation (CV)	192
7.3.3	Information Criteria	197
7.3.4	Multi-Objective Optimization	200
7.3.5	Statistical Tests	202
7.3.6	Correlation-Based Methods	204

7.4	Explicit Structure Optimization	205
7.5	Regularization: Implicit Structure Optimization	207
7.5.1	Effective Parameters	208
7.5.2	Regularization by Non-Smoothness Penalties	209
7.5.3	Regularization by Early Stopping	211
7.5.4	Regularization by Constraints	213
7.5.5	Regularization by Staggered Optimization	215
7.5.6	Regularization by Local Optimization	216
7.6	Structured Models for Complexity Reduction	218
7.6.1	Curse of Dimensionality	218
7.6.2	Hybrid Structures	221
7.6.3	Projection-Based Structures	225
7.6.4	Additive Structures	226
7.6.5	Hierarchical Structures	227
7.6.6	Input Space Decomposition with Tree Structures	228
7.7	Summary	229
7.8	Problems	230
8	Summary of Part I	233
Part II Static Models		
9	Introduction to Static Models	239
9.1	Multivariable Systems	240
9.2	Basis Function Formulation	241
9.2.1	Global and Local Basis Functions	241
9.2.2	Linear and Nonlinear Parameters	243
9.3	Extended Basis Function Formulation	245
9.4	Static Test Process	246
9.5	Evaluation Criteria	247
10	Linear, Polynomial, and Look-Up Table Models	249
10.1	Linear Models	249
10.2	Polynomial Models	251
10.2.1	Regularized Polynomials	254
10.2.2	Orthogonal Polynomials	258
10.2.3	Summary Polynomials	261
10.3	Look-Up Table Models	262
10.3.1	One-Dimensional Look-Up Tables	263
10.3.2	Two-Dimensional Look-Up Tables	265
10.3.3	Optimization of the Heights	268
10.3.4	Optimization of the Grid	269
10.3.5	Optimization of the Complete Look-Up Table	271
10.3.6	Incorporation of Constraints	271
10.3.7	Properties of Look-Up Table Models	274

10.4	Summary	276
10.5	Problems	277
11	Neural Networks	279
11.1	Construction Mechanisms	282
11.1.1	Ridge Construction	283
11.1.2	Radial Construction	283
11.1.3	Tensor Product Construction	286
11.2	Multilayer Perceptron (MLP) Network	287
11.2.1	MLP Neuron	288
11.2.2	Network Structure	290
11.2.3	Backpropagation	293
11.2.4	MLP Training	294
11.2.5	Simulation Examples	298
11.2.6	MLP Properties	300
11.2.7	Projection Pursuit Regression (PPR)	302
11.2.8	Multiple Hidden Layers	303
11.2.9	Deep Learning	305
11.3	Radial Basis Function (RBF) Networks	309
11.3.1	RBF Neuron	309
11.3.2	Network Structure	313
11.3.3	RBF Training	315
11.3.4	Simulation Examples	323
11.3.5	RBF Properties	325
11.3.6	Regularization Theory	328
11.3.7	Normalized Radial Basis Function (NRBF) Networks	330
11.4	Other Neural Networks	333
11.4.1	General Regression Neural Network (GRNN)	334
11.4.2	Cerebellar Model Articulation Controller (CMAC)	335
11.4.3	Delaunay Networks	339
11.4.4	Just-In-Time Models	340
11.5	Summary	343
11.6	Problems	344
12	Fuzzy and Neuro-Fuzzy Models	347
12.1	Fuzzy Logic	348
12.1.1	Membership Functions	349
12.1.2	Logic Operators	350
12.1.3	Rule Fulfillment	351
12.1.4	Accumulation	352
12.2	Types of Fuzzy Systems	352
12.2.1	Linguistic Fuzzy Systems	353
12.2.2	Singleton Fuzzy Systems	355
12.2.3	Takagi-Sugeno Fuzzy Systems	357

12.3	Neuro-Fuzzy (NF) Networks	359
12.3.1	Fuzzy Basis Functions	359
12.3.2	Equivalence Between RBF Networks and Fuzzy Models.....	361
12.3.3	What to Optimize?	362
12.3.4	Interpretation of Neuro-Fuzzy Networks	365
12.3.5	Incorporating and Preserving Prior Knowledge	370
12.3.6	Simulation Examples	371
12.4	Neuro-Fuzzy Learning Schemes	371
12.4.1	Nonlinear Local Optimization.....	373
12.4.2	Nonlinear Global Optimization	374
12.4.3	Orthogonal Least Squares Learning	375
12.4.4	Fuzzy Rule Extraction by a Genetic Algorithm (FUREGA)	377
12.4.5	Adaptive Spline Modeling of Observation Data (ASMOD)	387
12.5	Summary	389
12.6	Problems	390
13	Local Linear Neuro-Fuzzy Models: Fundamentals	393
13.1	Basic Ideas	394
13.1.1	Illustration of Local Linear Neuro-Fuzzy Models....	396
13.1.2	Interpretation of the Local Linear Model Offsets	400
13.1.3	Interpretation as Takagi-Sugeno Fuzzy System	401
13.1.4	Interpretation as Extended NRBF Network	404
13.2	Parameter Optimization of the Rule Consequents.....	405
13.2.1	Global Estimation.....	405
13.2.2	Local Estimation	407
13.2.3	Global Versus Local Estimation.....	410
13.2.4	Robust Regression	415
13.2.5	Regularized Regression.....	416
13.2.6	Data Weighting	417
13.3	Structure Optimization of the Rule Premises	419
13.3.1	Local Linear Model Tree (LOLIMOT) Algorithm ...	421
13.3.2	Different Objectives for Structure and Parameter Optimization	430
13.3.3	Smoothness Optimization	432
13.3.4	Splitting Ratio Optimization	434
13.3.5	Merging of Local Models	436
13.3.6	Principal Component Analysis for Preprocessing....	438
13.3.7	Models with Multiple Outputs	440
13.4	Summary	444
13.5	Problems	445

14	Local Linear Neuro-Fuzzy Models: Advanced Aspects	447
14.1	Different Input Spaces for Rule Premises and Consequents	448
14.1.1	Identification of Processes with Direction-Dependent Behavior	451
14.1.2	Piecewise Affine (PWA) Models	454
14.2	More Complex Local Models	454
14.2.1	From Local Neuro-Fuzzy Models to Polynomials ...	454
14.2.2	Local Quadratic Models for Input Optimization	457
14.2.3	Different Types of Local Models	460
14.3	Structure Optimization of the Rule Consequents	462
14.4	Interpolation and Extrapolation Behavior	466
14.4.1	Interpolation Behavior	466
14.4.2	Extrapolation Behavior	469
14.5	Global and Local Linearization	474
14.6	Online Learning	478
14.6.1	Online Adaptation of the Rule Consequents	480
14.6.2	Online Construction of the Rule Premise Structure	486
14.7	Oblique Partitioning	489
14.7.1	Smoothness Determination	489
14.7.2	Hinging Hyperplanes	490
14.7.3	Smooth Hinging Hyperplanes	492
14.7.4	Hinging Hyperplane Trees (HHT)	494
14.8	Hierarchical Local Model Tree (HILOMOT) Algorithm	496
14.8.1	Forming the Partition of Unity	497
14.8.2	Split Parameter Optimization	500
14.8.3	Building up the Hierarchy	505
14.8.4	Smoothness Adjustment	510
14.8.5	Separable Nonlinear Least Squares	513
14.8.6	Analytic Gradient Derivation	518
14.8.7	Analyzing Input Relevance from Partitioning	526
14.8.8	HILOMOT Versus LOLIMOT	530
14.9	Errorbars, Design of Excitation Signals, and Active Learning	536
14.9.1	Errorbars	537
14.9.2	Detecting Extrapolation	540
14.9.3	Design of Excitation Signals	541
14.10	Design of Experiments	543
14.10.1	Unsupervised Methods	543
14.10.2	Model Variance-Oriented Methods	546
14.10.3	Model Bias-Oriented Methods	550
14.10.4	Active Learning with HILOMOT DoE	554
14.11	Bagging Local Model Trees	567
14.11.1	Unstable Models	569
14.11.2	Bagging with HILOMOT	569

14.11.3	Bootstrapping for Confidence Assessment	571
14.11.4	Model Weighting	573
14.12	Summary and Conclusions	575
14.13	Problems	580
15	Input Selection for Local Model Approaches	583
15.1	Test Processes	586
15.1.1	Test Process One (TP1)	586
15.1.2	Test Process Two (TP2)	587
15.1.3	Test Process Three (TP3)	588
15.1.4	Test Process Four (TP4)	588
15.2	Mixed Wrapper-Embedded Input Selection Approach: Authored by Julian Belz	590
15.2.1	Investigation with Test Processes	593
15.2.2	Test Process Two	594
15.2.3	Extensive Simulation Studies	595
15.3	Regularization-Based Input Selection Approach: Authored by Julian Belz	604
15.3.1	Normalized L1 Split Regularization	606
15.3.2	Investigation with Test Processes	611
15.4	Embedded Approach: Authored by Julian Belz	620
15.4.1	Partition Analysis	621
15.4.2	Investigation with Test Processes	623
15.5	Visualization: Partial Dependence Plots	626
15.5.1	Investigation with Test Processes	628
15.6	Miles per Gallon Data Set	631
15.6.1	Mixed Wrapper-Embedded Input Selection	632
15.6.2	Regularization-Based Input Selection	633
15.6.3	Visualization: Partial Dependence Plot	635
15.6.4	Critical Assessment of Partial Dependence Plots	636
16	Gaussian Process Models (GPMs)	639
16.1	Overview on Kernel Methods	640
16.1.1	LS Kernel Methods	644
16.1.2	Non-LS Kernel Methods	644
16.2	Kernels	644
16.3	Kernel Ridge Regression	646
16.3.1	Transition to Kernels	647
16.4	Regularizing Parameters and Functions	649
16.4.1	Discrepancy in Penalty Terms	651
16.5	Reproducing Kernel Hilbert Spaces (RKHS)	653
16.5.1	Norms	653
16.5.2	RKHS Objective and Solution	654
16.5.3	Equivalent Kernels and Locality	656
16.5.4	Two Points of View	658
16.6	Gaussian Processes/Kriging	659

16.6.1	Key Idea	659
16.6.2	Some Basics	660
16.6.3	Prior	661
16.6.4	Posterior	666
16.6.5	Incorporating Output Noise	671
16.6.6	Model Variance	672
16.6.7	Incorporating a Base Model	673
16.6.8	Relationship to RBF Networks	675
16.6.9	High-Dimensional Kernels	676
16.7	Hyperparameters	677
16.7.1	Influence of the Hyperparameters	678
16.7.2	Optimization of the Hyperparameters	686
16.7.3	Marginal Likelihood	692
16.7.4	A Note on the Prior Variance	704
16.8	Summary	706
16.9	Problems	708
17	Summary of Part II	709
 Part III Dynamic Models		
18	Linear Dynamic System Identification	715
18.1	Overview of Linear System Identification	716
18.2	Excitation Signals	717
18.3	General Model Structure	721
18.3.1	Terminology and Classification	723
18.3.2	Optimal Predictor	729
18.3.3	Some Remarks on the Optimal Predictor	733
18.3.4	Prediction Error Methods	735
18.4	Time Series Models	737
18.4.1	Autoregressive (AR)	738
18.4.2	Moving Average (MA)	739
18.4.3	Autoregressive Moving Average (ARMA)	740
18.5	Models with Output Feedback	741
18.5.1	Autoregressive with Exogenous Input (ARX)	741
18.5.2	Autoregressive Moving Average with Exogenous Input (ARMAX)	752
18.5.3	Autoregressive Autoregressive with Exogenous Input (ARARX)	757
18.5.4	Output Error (OE)	760
18.5.5	Box-Jenkins (BJ)	764
18.5.6	State Space Models	766
18.5.7	Simulation Example	768
18.6	Models Without Output Feedback	770
18.6.1	Finite Impulse Response (FIR)	771
18.6.2	Regularized FIR Models	775

18.6.3	Bias and Variance of Regularized FIR Models	779
18.6.4	Impulse Response Preservation (IRP) FIR Approach	780
18.6.5	Orthonormal Basis Functions (OBF)	790
18.6.6	Simulation Example	799
18.7	Some Advanced Aspects	803
18.7.1	Initial Conditions	803
18.7.2	Consistency	805
18.7.3	Frequency-Domain Interpretation.....	806
18.7.4	Relationship Between Noise Model and Filtering....	808
18.7.5	Offsets	809
18.8	Recursive Algorithms.....	811
18.8.1	Recursive Least Squares (RLS) Method.....	812
18.8.2	Recursive Instrumental Variables (RIV) Method.....	812
18.8.3	Recursive Extended Least Squares (RELS) Method	814
18.8.4	Recursive Prediction Error Methods (RPEM).....	815
18.9	Determination of Dynamic Orders	816
18.10	Multivariable Systems	817
18.10.1	P-Canonical Model	819
18.10.2	Matrix Polynomial Model	820
18.10.3	Subspace Methods	823
18.11	Closed-Loop Identification	823
18.11.1	Direct Methods.....	824
18.11.2	Indirect Methods	826
18.11.3	Identification for Control	827
18.12	Summary	828
18.13	Problems	829
19	Nonlinear Dynamic System Identification	831
19.1	From Linear to Nonlinear System Identification	832
19.2	External Dynamics.....	834
19.2.1	Illustration of the External Dynamics Approach	834
19.2.2	Series-Parallel and Parallel Models	841
19.2.3	Nonlinear Dynamic Input/Output Model Classes	843
19.2.4	Restrictions of Nonlinear Input/Output Models	849
19.3	Internal Dynamics	851
19.4	Parameter Scheduling Approach	851
19.5	Training Recurrent Structures	852
19.5.1	Backpropagation-Through-Time (BPTT) Algorithm	853
19.5.2	Real-Time Recurrent Learning	855
19.6	Multivariable Systems	856
19.6.1	Issues with Multiple Inputs.....	857
19.7	Excitation Signals	859

19.7.1	From PRBS to APRBS	860
19.7.2	Ramp	864
19.7.3	Multisine	865
19.7.4	Chirp.....	866
19.7.5	APRBS	867
19.7.6	NARX and NOBF Input Spaces	869
19.7.7	MISO Systems	871
19.7.8	Tradeoffs	872
19.8	Optimal Excitation Signal Generator: Coauthored by Tim O. Heinz	873
19.8.1	Approaches with Fisher Information.....	874
19.8.2	Optimized Nonlinear Input Signal (OMNIPUS) for SISO Systems	876
19.8.3	Optimized Nonlinear Input Signal (OMNIPUS) for MISO Systems	878
19.9	Determination of Dynamic Orders	887
19.10	Summary	890
19.11	Problems	890
20	Classical Polynomial Approaches	893
20.1	Properties of Dynamic Polynomial Models	894
20.2	Kolmogorov-Gabor Polynomial Models.....	895
20.3	Volterra-Series Models	896
20.4	Parametric Volterra-Series Models.....	897
20.5	NDE Models	898
20.6	Hammerstein Models	898
20.7	Wiener Models	900
20.8	Problems	901
21	Dynamic Neural and Fuzzy Models	903
21.1	Curse of Dimensionality	904
21.1.1	MLP Networks	904
21.1.2	RBF Networks	905
21.1.3	Singleton Fuzzy and NRBF Models	905
21.2	Interpolation and Extrapolation Behavior	905
21.3	Training.....	907
21.3.1	MLP Networks	908
21.3.2	RBF Networks	908
21.3.3	Singleton Fuzzy and NRBF Models	909
21.4	Integration of a Linear Model	909
21.5	Simulation Examples	910
21.5.1	MLP Networks	911
21.5.2	RBF Networks	913
21.5.3	Singleton Fuzzy and NRBF Models	915
21.6	Summary	916
21.7	Problems	917

22	Dynamic Local Linear Neuro-Fuzzy Models	919
22.1	One-Step Prediction Error Versus Simulation Error	923
22.2	Determination of the Rule Premises	924
22.3	Linearization	926
22.3.1	Static and Dynamic Linearization.....	927
22.3.2	Dynamics of the Linearized Model	928
22.3.3	Different Rule Consequent Structures	930
22.4	Model Stability	932
22.4.1	Influence of Rule Premise Inputs on Stability	933
22.4.2	Lyapunov Stability and Linear Matrix Inequalities (LMIs)	935
22.4.3	Ensuring Stable Extrapolation.....	937
22.5	Dynamic LOLIMOT Simulation Studies	938
22.5.1	Nonlinear Dynamic Test Processes	939
22.5.2	Hammerstein Process	940
22.5.3	Wiener Process	942
22.5.4	NDE Process	944
22.5.5	Dynamic Nonlinearity Process	946
22.6	Advanced Local Linear Methods and Models	947
22.6.1	Local Linear Instrumental Variables (IV) Method ...	948
22.6.2	Local Linear Output Error (OE) Models.....	951
22.6.3	Local Linear ARMAX Models.....	951
22.7	Local Regularized Finite Impulse Response Models: Coauthored by Tobias Munker	952
22.7.1	Structure	952
22.7.2	Local Estimation	954
22.7.3	Hyperparameter Tuning.....	954
22.7.4	Evaluation of Performance	955
22.8	Local Linear Orthonormal Basis Functions Models	957
22.9	Structure Optimization of the Rule Consequents.....	962
22.10	Summary and Conclusions	966
22.11	Problems	970
23	Neural Networks with Internal Dynamics	971
23.1	Fully Recurrent Networks	972
23.2	Partially Recurrent Networks.....	973
23.3	State Recurrent Networks	973
23.4	Locally Recurrent Globally Feedforward Networks	975
23.5	Long Short-Term Memory (LSTM) Networks	976
23.6	Internal Versus External Dynamics	979
23.7	Problems	982
Part IV Applications		
24	Applications of Static Models	985
24.1	Driving Cycle	986

24.1.1	Process Description	986
24.1.2	Smoothing of a Driving Cycle	987
24.1.3	Improvements and Extensions	988
24.1.4	Differentiation	989
24.1.5	The Role of Look-Up Tables in Automotive Electronics	990
24.1.6	Modeling of Exhaust Gases	994
24.1.7	Optimization of Exhaust Gases	997
24.1.8	Outlook: Dynamic Models	1004
24.2	Summary	1006
25	Applications of Dynamic Models	1007
25.1	Cooling Blast	1007
25.1.1	Process Description	1008
25.1.2	Experimental Results	1009
25.2	Diesel Engine Turbocharger	1013
25.2.1	Process Description	1015
25.2.2	Experimental Results	1017
25.3	Thermal Plant	1023
25.3.1	Process Description	1024
25.3.2	Transport Process	1025
25.3.3	Tubular Heat Exchanger	1030
25.3.4	Cross-Flow Heat Exchanger	1035
25.4	Summary	1041
26	Design of Experiments	1043
26.1	Practical DoE Aspects: Authored by Julian Belz	1044
26.1.1	Function Generator	1044
26.1.2	Order of Experimentation	1047
26.1.3	Biggest Gap Sequence	1049
26.1.4	Median Distance Sequence	1050
26.1.5	Intelligent k -Means Sequence	1050
26.1.6	Other Determination Strategies	1051
26.1.7	Comparison on Synthetic Functions	1053
26.1.8	Summary	1056
26.1.9	Corner Measurement	1059
26.1.10	Comparison of Space-Filling Designs	1064
26.2	Active Learning for Structural Health Monitoring	1070
26.2.1	Simulation Results	1072
26.2.2	Experimental Results	1074
26.3	Active Learning for Engine Measurement	1077
26.3.1	Problem Setting	1077
26.3.2	Operating Point-Specific Engine Models	1080
26.3.3	Global Engine Model	1084
26.4	Nonlinear Dynamic Excitation Signal Design for Common Rail Injection	1087

26.4.1	Example: High-Pressure Fuel Supply System.....	1087
26.4.2	Identifying the Rail Pressure System	1088
26.4.3	Results	1089
27	Input Selection Applications	1095
27.1	Air Mass Flow Prediction	1096
27.1.1	Mixed Wrapper-Embedded Input Selection	1098
27.1.2	Partition Analysis	1100
27.2	Fan Metamodeling: Authored by Julian Belz.....	1101
27.2.1	Centrifugal Impeller Geometry	1102
27.2.2	Axial Impeller Geometry	1103
27.2.3	Why Metamodels?	1103
27.2.4	Design of Experiments: Centrifugal Fan Metamodel	1105
27.2.5	Design of Experiments: Axial Fan Metamodel.....	1105
27.2.6	Order of Experimentation	1106
27.2.7	Goal-Oriented Active Learning	1108
27.2.8	Mixed Wrapper-Embedded Input Selection	1111
27.2.9	Centrifugal Fan Metamodel	1111
27.2.10	Axial Fan Metamodel.....	1113
27.2.11	Summary	1115
27.3	Heating, Ventilating, and Air Conditioning System.....	1115
27.3.1	Problem Configuration	1116
27.3.2	Available Data Sets	1117
27.3.3	Mixed Wrapper-Embedded Input Selection	1118
27.3.4	Results	1119
28	Applications of Advanced Methods.....	1125
28.1	Nonlinear Model Predictive Control	1126
28.2	Online Adaptation	1130
28.2.1	Variable Forgetting Factor	1131
28.2.2	Control and Adaptation Models.....	1132
28.2.3	Parameter Transfer.....	1133
28.2.4	Systems with Multiple Inputs	1135
28.2.5	Experimental Results	1136
28.3	Fault Detection	1140
28.3.1	Methodology	1141
28.3.2	Experimental Results	1143
28.4	Fault Diagnosis.....	1146
28.4.1	Methodology	1146
28.4.2	Experimental Results	1148
28.5	Reconfiguration	1149
29	LMN Toolbox	1151
29.1	Termination Criteria	1152
29.1.1	Corrected AIC.....	1153

29.1.2	Corrected BIC.....	1153
29.1.3	Validation.....	1154
29.1.4	Maximum Number of Local Models.....	1154
29.1.5	Effective Number of Parameters	1155
29.1.6	Maximum Training Time.....	1156
29.2	Polynomial Degree of Local Models	1156
29.3	Dynamic Models	1157
29.3.1	Nonlinear Orthonormal Basis Function Models.....	1160
29.4	Different Input Spaces x and z	1160
29.5	Smoothness.....	1160
29.6	Data Weighting.....	1161
29.7	Visualization and Simplified Tool.....	1161
Correction to: Nonlinear System Identification		C1
A	Vectors and Matrices	1165
A.1	Vector and Matrix Derivatives.....	1165
A.2	Gradient, Hessian, and Jacobian	1167
B	Statistics	1169
B.1	Deterministic and Random Variables	1169
B.2	Probability Density Function (pdf).....	1171
B.3	Stochastic Processes and Ergodicity	1173
B.4	Expectation.....	1176
B.5	Variance	1179
B.6	Correlation and Covariance	1180
B.7	Properties of Estimators	1183
