SECTION Introduction.....XXXV

Quantitative MRI: Rationale and Challenges.....xxxvii

Vikas Gulani and Nicole Seiberlich

MRI Biomarkers.....liii

Paul Hockings, Nadeem Saeed, Roslyn Simms, Nadia Smith, Matt G. Hall,
John C. Waterton, and Steven Sourbron

SECTION 1 Relaxometry..... 1

CHAPTER 1 Biophysical and Physiological Principles of T_1 and T_23

Sean Deoni

1.1 Introduction.....3

1.2 The biophysical basis of relaxation.....4

1.2.1 T_2 relaxation.....6

1.2.2 T_1 relaxation.....7

1.2.3 Mathematical formulation of relaxation.....9

1.3 Biophysical factors that influence relaxation.....10

1.3.1 Multicomponent relaxometry.....11

1.3.2 Microstructural orientation and magnetic susceptibility.....13

1.4 Summary.....15

References.....16

CHAPTER 2 Quantitative T_1 and $T_{1\rho}$ Mapping..... 19

Mathieu Boudreau, Kathryn E. Keenan, and Nikola Stikov

2.1 Introduction.....19

2.2 Inversion recovery.....20

2.2.1 Signal modeling.....20

2.2.2 Data fitting.....21

2.2.3 Benefits and pitfalls.....23

2.2.4 Other saturation recovery T_1 mapping techniques.....25

2.3 Variable flip angle.....25

2.3.1 Signal modeling.....26

2.3.2 Data fitting.....29

2.3.3 Benefits and pitfalls.....30

2.4 MP2RAGE.....32

2.4.1 Signal modeling.....33

2.4.2	Data fitting	34
2.4.3	Benefits and pitfalls	35
2.5	$T_{1\rho}$ mapping	36
2.5.1	Signal modeling	37
2.5.2	Data fitting	39
2.5.3	Benefits and pitfalls	39
2.6	Concluding remarks	40
	References	41
CHAPTER 3	Quantitative T_2 and T_2^* Mapping	47
	Richard D. Dortch	
3.1	Introduction	47
3.2	Spin-spin relaxation (T_2) measurement sequences	48
3.2.1	Single spin echo sequences	48
3.2.2	Multiecho spin echo sequences	51
3.2.3	T_2 -prepared sequences	53
3.2.4	Unspoiled gradient echo sequences	54
3.2.5	Model-based reconstructions	54
3.3	Effective spin-spin relaxation (T_2^*) measurement sequences	56
3.3.1	Single and multiecho spoiled gradient echo sequences	56
3.3.2	Prospective correction of susceptibility-induced field gradients	56
3.3.3	Retrospective correction of susceptibility-induced field gradients	57
3.3.4	Asymmetric spin echo sequences	58
3.4	Simultaneous T_2 and T_2^* measurement sequences	58
3.5	Approaches for estimating T_2 and T_2^*	60
3.5.1	Single-exponential models	60
3.5.2	Multiexponential models	61
3.6	Summary	62
	References	62
CHAPTER 4	Multiproperty Mapping Methods	65
	Philipp Ehses and Rahel Heule	
4.1	Simultaneous quantification of multiple relaxometry parameters	65
4.2	Simultaneous quantification of T_1 and T_2	65
4.2.1	Inversion recovery-bSSFP (IR-bSSFP, IR TrueFISP)	66
4.2.2	Magnetic resonance fingerprinting	70
4.2.3	Magnetization-prepared dual echo steady-state	70
4.2.4	Triple-echo steady-state	72
4.2.5	Phase-cycled bSSFP	76
4.3	Simultaneous quantification of T_1 and T_2^*	81
4.3.1	Absolute quantification	81
4.3.2	Quantification relative to baseline	81
4.4	Simultaneous quantification of T_2 and T_2^*	82

4.5	Common challenges in simultaneous relaxation time measurements.....	85
4.6	Summary.....	85
	References.....	87
CHAPTER 5	Specialized Mapping Methods in the Heart.....	91
	Gastão Cruz, Sébastien Roujol, René M. Botnar, and Claudia Prieto	
5.1	Introduction.....	91
5.2	Cardiac T_1 and extracellular volume mapping.....	92
5.2.1	Inversion recovery-based T_1 mapping.....	92
5.2.2	Saturation recovery-based T_1 mapping.....	95
5.2.3	Combined inversion recovery and saturation recovery-based T_1 mapping...97	
5.2.4	Cardiac extracellular volume mapping.....	98
5.2.5	Novel developments in cardiac T_1 mapping.....	99
5.3	Cardiac T_2 and T_2^* mapping.....	101
5.3.1	T_2 -prepared T_2 mapping.....	102
5.3.2	Gradient and spin echo T_2 mapping.....	103
5.3.3	Comparison of T_2 mapping techniques.....	104
5.3.4	Cardiac T_2^* mapping.....	106
5.3.5	Novel developments in cardiac T_2 mapping.....	108
5.4	Beyond single parameter mapping in the heart.....	109
5.4.1	Joint T_1 - T_2 mapping of the heart.....	110
5.4.2	Cardiac magnetic resonance fingerprinting.....	111
5.4.3	Cardiac Multitasking.....	114
5.5	Concluding remarks.....	115
	References.....	116
CHAPTER 6	Advances in Signal Processing for Relaxometry.....	123
	Noam Ben-Eliezer	
6.1	Introduction.....	123
6.2	Advanced signal models.....	124
6.2.1	T_2 mapping using the slice-resolved Extended Phase Graph formalism... 124	
6.2.2	Bloch equation simulation-based signal models.....	126
6.2.3	Multi-GRE-based relaxation mapping.....	127
6.2.4	Confounding factors.....	128
6.3	Advanced reconstruction of undersampled datasets.....	131
6.3.1	Non-Cartesian data sampling.....	131
6.3.2	Model-based reconstruction of undersampled relaxation mapping.....	132
6.3.3	Compressed sensing (CS) and sparsity-driven reconstruction.....	133
6.4	Identification of new signal motifs.....	138
6.4.1	Magnetic Resonance Fingerprinting.....	139
6.4.2	Subvoxel multicompartment relaxometry.....	141
6.5	Concluding remarks.....	143
	References.....	144

CHAPTER 7	Relaxometry: Applications in the Brain	149
	Alex L. MacKay and Cornelia Laule	
7.1	Introduction.....	149
7.2	Overview of the brain.....	149
7.3	T_1 in brain.....	150
7.3.1	Measuring T_1 in brain.....	150
7.3.2	Physiological influences of T_1 in brain.....	150
7.3.3	Single or multiple T_1 components?.....	152
7.3.4	Interpreting T_1 in the brain.....	153
7.4	Clinical applications of T_1 relaxation.....	153
7.4.1	Development and aging.....	153
7.4.2	Multiple sclerosis.....	155
7.4.3	Parkinson's disease.....	156
7.4.4	Brain cancer and radiation.....	156
7.4.5	Other applications.....	157
7.5	T_2 in brain.....	157
7.5.1	Measuring multicomponent T_2 in brain.....	157
7.5.2	Physiological influences of T_2 in brain.....	159
7.5.3	Interpreting T_2 in the brain.....	160
7.6	Clinical applications of T_2 relaxation.....	160
7.6.1	Development and aging.....	160
7.6.2	Developmental and genetic disorders.....	161
7.6.3	Multiple sclerosis.....	163
7.6.4	Alzheimer's disease.....	165
7.6.5	Epilepsy.....	165
7.6.6	Cancer.....	165
7.6.7	Other diseases.....	165
7.7	$T_{1\rho}$ in brain.....	167
7.7.1	Measuring $T_{1\rho}$ in brain.....	167
7.7.2	Interpreting $T_{1\rho}$ in brain and clinical applications.....	169
7.8	T_2^* in brain.....	169
7.8.1	Measuring T_2^* in brain.....	169
7.8.2	Interpreting T_2^* in brain and clinical applications.....	169
7.9	Challenges with clinical application of relaxation.....	170
7.10	Concluding remarks.....	171
	Acknowledgments.....	171
	References.....	171
CHAPTER 8	Relaxometry: Applications in Musculoskeletal Systems	185
	Xiaojuan Li and Carl S. Winalski	
8.1	Introduction.....	185
8.2	MRI relaxometry of cartilage.....	185

8.2.1	Cartilage biochemistry and degeneration.....	185
8.2.2	Post-contrast T_1 relaxation time mapping with delayed gadolinium-enhanced MRI of cartilage.....	187
8.2.3	T_2 and T_2^* relaxation time mapping in cartilage.....	189
8.2.4	$T_{1\rho}$ relaxation time mapping of cartilage.....	191
8.3	MRI relaxometry to assess skeletal muscle.....	194
8.4	MRI relaxometry of menisci, tendons, and ligaments.....	197
8.5	MRI relaxometry of intervertebral discs.....	199
8.6	Outlook and Conclusion.....	202
	Acknowledgments.....	203
	References.....	203
CHAPTER 9	Relaxometry: Applications in the Body.....	215
	Jonathan R. Dillman, Andrew T. Trout, and Jean A. Tkach	
9.1	Introduction.....	215
9.2	Liver.....	215
9.3	Spleen.....	225
9.4	Kidneys.....	227
9.5	Pancreas.....	228
9.6	Prostate.....	232
9.7	Breast.....	232
9.8	Challenges.....	235
	References.....	235
CHAPTER 10	Relaxometry: Applications in the Heart.....	239
	Erica Dall'Armellina and Arka Das	
10.1	Introduction.....	239
10.2	Acute chest pain syndromes.....	241
10.2.1	Myocarditis.....	241
10.2.2	Takostubo.....	243
10.2.3	Ischemic chest pain and nonobstructive coronary artery disease.....	243
10.3	Acute myocardial infarction.....	244
10.3.1	ST-elevation myocardial infarction.....	244
10.3.2	Non-ST elevation myocardial infarction (NSTEMI).....	246
10.4	Chronic stable coronary artery disease.....	247
10.5	Cardiomyopathy.....	248
10.5.1	Hypertrophic cardiomyopathy.....	248
10.5.2	Amyloidosis.....	249
10.5.3	Anderson-Fabry disease.....	249
10.5.4	Dilated cardiomyopathy.....	250
10.5.5	Iron overload cardiomyopathy.....	250

10.6	Systemic inflammatory diseases.....	250
10.7	Valve disease.....	251
	10.7.1 Aortic stenosis.....	251
	10.7.2 Mitral regurgitation.....	251
10.8	Heart failure with preserved ejection fraction.....	252
10.9	Heart transplant.....	252
10.10	Conclusions.....	253
	References.....	253
SECTION 2 Perfusion and Permeability		267
CHAPTER 11	Physical and Physiological Principles of Perfusion and Permeability	269
	Stig P. Cramer, Mark B. Vestergaard, Ulrich Lindberg, and Henrik B.W. Larsson	
11.1	Introduction to perfusion and permeability.....	269
11.2	Perfusion and vascular anatomy in different tissues and organs.....	270
	11.2.1 The brain.....	270
	11.2.2 The heart.....	271
	11.2.3 The liver.....	271
	11.2.4 The kidneys.....	271
	11.2.5 Perfusion and permeability in disease.....	271
11.3	MRI signal and tracer agents.....	272
	11.3.1 Safety of MR contrast agents.....	272
	11.3.2 Relaxivity of contrast agents.....	273
	11.3.3 Measuring contrast agent concentration.....	274
11.4	Basic tracer kinetics.....	275
	11.4.1 Linear and stationary tissues.....	276
	11.4.2 The transit time distribution.....	277
	11.4.3 The central volume theorem.....	280
11.5	Compartment models.....	280
	11.5.1 One-compartment model.....	281
	11.5.2 Two-compartment exchange model.....	282
	11.5.3 The Patlak model.....	285
11.6	Model-free perfusion quantification.....	285
11.7	Conclusion.....	292
	References.....	292
CHAPTER 12	Arterial Spin Labeling MRI: Basic Physics, Pulse Sequences, and Modeling.....	295
	Susan Francis	
12.1	Introduction.....	295
12.2	Basic physics.....	295

12.3	ASL labeling schemes	297
	12.3.1 Pulsed ASL	297
	12.3.2 Continuous ASL	299
	12.3.3 Pseudo-continuous ASL	299
	12.3.4 Velocity selective ASL	301
12.4	Sampling strategies	302
	12.4.1 Single-TI and multi-TI sampling	302
	12.4.2 Multiphase or Look-Locker (LL) sampling strategy	302
	12.4.3 Time-encoded multi-PLD	302
12.5	Readout scheme	304
12.6	Improving the signal-to-noise ratio of ASL data	304
	12.6.1 Pre- and postsaturation schemes	304
	12.6.2 Background suppression	306
	12.6.3 Vascular crushing	306
12.7	Preprocessing ASL data	308
	12.7.1 Subtraction methods	308
	12.7.2 Motion correction	308
	12.7.3 Outlier detection	309
	12.7.4 Partial volume effects	309
12.8	Modeling the ASL signal	309
	12.8.1 Single compartment model using the modified Bloch equations	309
	12.8.2 General kinetic model	310
12.9	Perfusion quantification	313
	12.9.1 Perfusion quantification using data collected at a single TI/PLD	313
	12.9.2 Perfusion quantification using multi-TI/PLD data	313
	12.9.3 Perfusion quantification using multiphase or Look-Locker sampling	314
	12.9.4 Comparison of methods of perfusion quantification	315
12.10	Applications of ASL	316
12.11	Summary	317
	References	317

CHAPTER 13 Dynamic Contrast-Enhanced MRI: Basic Physics, Pulse Sequences, and Modeling 321

Ye Tian and Ganesh Adluru

13.1	Introduction	321
13.2	Contrast agent mechanism	321
13.3	Data acquisition in DCE-MRI	325
	13.3.1 Requirements of DCE-MRI data	325
	13.3.2 DCE-MRI pulse sequences	327
	13.3.3 Sampling trajectories	329
	13.3.4 Arterial input function	330

13.4	Image reconstruction in DCE-MRI.....	330
13.4.1	Parallel imaging.....	330
13.4.2	Constrained reconstruction.....	332
13.5	Postprocessing for DCE-based perfusion mapping.....	334
13.5.1	Motion compensation.....	334
13.5.2	ROI-based and pixel-based methods.....	335
13.5.3	Modeling.....	338
13.6	Summary.....	339
	References.....	340
CHAPTER 14	Dynamic Susceptibility Contrast MRI: Basic Physics, Pulse Sequences, and Modeling.....	345
	Endre Grøvik, Atle Bjørnerud, and Kyrre Eeg Emblem	
14.1	Introduction.....	345
14.2	Biophysical foundations.....	346
14.2.1	Dose-response in DSC-MRI.....	346
14.2.2	Transverse relaxivity of contrast agents in vivo.....	347
14.3	DSC-MRI data acquisition.....	348
14.3.1	Current recommendations.....	348
14.3.2	Susceptibility artifacts.....	350
14.3.3	Non-GBCA tracers.....	352
14.4	DSC-MRI data analysis for perfusion mapping.....	353
14.4.1	Forward models.....	353
14.4.2	Deconvolution.....	355
14.4.3	Delay effects.....	356
14.4.4	Contrast agent extravasation considerations.....	357
14.4.5	Arterial input function determination.....	358
14.5	Advanced DSC-MRI methods.....	360
14.6	DSC-MRI beyond the brain.....	361
14.7	Conclusion.....	361
	Acknowledgment.....	362
	References.....	362
CHAPTER 15	Applications of Quantitative Perfusion and Permeability in the Brain.....	369
	Shalini Amukotuwa, Laura C. Bell, and David L. Thomas	
15.1	Introduction.....	369
15.2	Applications of perfusion MRI in ischemic cerebrovascular disease.....	370
15.2.1	Acute ischemic stroke.....	370
15.2.2	Chronic steno-occlusive disease.....	376

15.3	Applications of perfusion MRI in brain cancer	379
15.3.1	Introduction	379
15.3.2	Diagnosis and neurosurgery	382
15.3.3	Evaluation of tumor progression and treatment response	386
15.4	Applications of perfusion MRI in dementia	388
15.4.1	Background	388
15.4.2	Diagnosis	391
15.4.3	Longitudinal monitoring of disease progression	391
15.4.4	Limitations of ASL in neurodegenerative disease	391
15.5	Summary	395
	References	396

CHAPTER 16 Applications of Quantitative Perfusion and Permeability in the Liver 405

Maxime Ronot, Florian Joly, and Bernard E. Van Beers

16.1	Introduction	405
16.2	The technical challenges of liver perfusion analysis	406
16.2.1	Image acquisition	406
16.2.2	Liver perfusion modeling	406
16.2.3	Correcting for liver movement	409
16.2.4	Reproducibility of liver perfusion measurements	409
16.3	Clinical applications	410
16.3.1	Liver oncology	410
16.3.2	Chronic liver disease	413
16.4	Perfusion mapping with hepatobiliary contrast agents	415
16.5	Alternative methods to assess liver perfusion	418
16.6	Summary	419
	Acknowledgment	420
	References	420

CHAPTER 17 Applications of Quantitative Perfusion and Permeability in the Body 427

Yong Chen, Muhammad Sohaib Nazir, Sebastian Kozerke, Sven Plein, and Shivani Pahwa

17.1	Introduction	427
17.2	Renal perfusion	428
17.2.1	Background	428
17.2.2	Technical developments	428
17.2.3	Clinical applications	432

17.3	Pancreatic perfusion.....	433
	17.3.1 Background.....	433
	17.3.2 Technical developments.....	433
	17.3.3 Clinical applications.....	435
17.4	Prostate perfusion.....	436
	17.4.1 Background.....	436
	17.4.2 Technical developments.....	437
	17.4.3 Clinical applications.....	438
17.5	Breast perfusion.....	438
	17.5.1 Background.....	438
	17.5.2 Technical developments.....	439
	17.5.3 Clinical applications.....	439
17.6	Cardiac perfusion.....	441
	17.6.1 Background.....	441
	17.6.2 Technical developments.....	442
	17.6.3 Clinical applications.....	444
17.7	Summary.....	446
	References.....	446
SECTION 3 Diffusion.....		455
CHAPTER 18	Physical and Physiological Principles of Diffusion.....	457
	Christopher D. Kroenke	
18.1	Introduction.....	457
18.2	Diffusion.....	458
18.3	The Stejskal-Tanner pulse sequence: A magnetic resonance method for measuring diffusion.....	461
18.4	Diffusion in biological tissue.....	464
18.5	Intravoxel incoherent motion.....	465
18.6	Using anisotropy in water diffusion to characterize cellular anatomy.....	466
18.7	Beyond FA and MD.....	469
18.8	Sensitivity of diffusion to cellular physiology and metabolism.....	470
18.9	Conclusions.....	473
	References.....	474
CHAPTER 19	Acquisition of Diffusion MRI Data.....	477
	Grant Yang and Jennifer A. McNab	
19.1	Introduction.....	477
19.2	Diffusion encoding strategies.....	477
	19.2.1 Single-pulsed gradients.....	478
	19.2.2 The diffusion propagator.....	479

19.2.3	Oscillating gradients and time-dependent diffusion	480
19.2.4	Multiple-pulsed gradients	481
19.2.5	Generalized diffusion waveforms	482
19.3	Refocusing mechanisms	484
19.4	Image encoding	487
19.4.1	Single-shot 2D echo-planar imaging	488
19.4.2	Multishot EPI	490
19.4.3	Alternatives to EPI	491
19.4.4	Acceleration methods	492
19.5	Hardware considerations and system limitations	493
19.6	Diffusion mapping outside the brain	495
19.6.1	Cardiac imaging	495
19.6.2	Spinal cord	496
19.6.3	Peripheral nervous system	496
19.6.4	Breast	496
19.6.5	Musculoskeletal	497
19.7	Summary	497
	Acknowledgments	497
	References	497

CHAPTER 20 Modeling Fiber Orientations Using Diffusion MRI 509

Daan Christiaens and J. Donald Tournier

20.1	Introduction	509
20.2	q -Space imaging	511
20.3	Diffusion tensor imaging	511
20.3.1	Geometric interpretation	512
20.3.2	DTI metrics and DEC-FA	513
20.4	Toward modeling crossing fibers: Higher-order signal representations	514
20.4.1	Diffusion kurtosis imaging	514
20.4.2	Multi-tensor models	515
20.5	High-angular resolution diffusion imaging	515
20.5.1	Spherical Harmonic decomposition	516
20.5.2	Q -ball imaging	517
20.6	Multifascicle compartment models	519
20.7	Spherical deconvolution	519
20.7.1	The spherical convolution model	520
20.7.2	Deconvolution and constraints	521
20.7.3	Response function estimation	522
20.7.4	Multi-tissue spherical deconvolution	523
20.8	Validation of fiber orientation estimation	524
20.9	Conclusions	525
	References	526

CHAPTER 21	Diffusion MRI Fiber Tractography	533
	Robert Elton Smith, Alan Connelly, and Fernando Calamante	
21.1	Introduction	533
21.2	Streamline tractography	533
21.2.1	Method summary	533
21.2.2	Deterministic vs probabilistic algorithms	543
21.2.3	Targeted tracking/virtual dissection vs whole-brain fiber tracking	546
21.3	Nonstreamline tractography	548
21.3.1	Front evolution tractography	548
21.3.2	Geodesic tractography	548
21.3.3	Global tractography	548
21.3.4	Voxel-constrained tractography algorithms	550
21.4	Quantification	551
21.4.1	Streamline-based connection densities	552
21.4.2	Other quantitative methods involving tractography	556
21.5	Conclusions	559
	References	559
CHAPTER 22	Measuring Microstructural Features Using Diffusion MRI	571
	Noam Shemesh	
22.1	Introduction	571
22.1.1	What is the motivation for measuring microstructure using diffusion MRI?	571
22.1.2	What is “microstructure”?	572
22.2	Directly imaging intrinsic microstructural features	573
22.2.1	The pore density function	573
22.2.2	The averaged propagator	577
22.2.3	The diffusion spectrum	577
22.3	Strategies for indirect quantification of microstructure	579
22.3.1	Single diffusion encoding signal representations	581
22.3.2	Tissue models	591
22.3.3	Biophysical models	592
22.4	Frontiers of microstructural MRI	594
22.5	Summary	595
	Acknowledgments	596
	References	596
CHAPTER 23	Diffusion MRI: Applications in the Brain	605
	Marco Bozzali, Andrew W. Barritt, and Laura Serra	
23.1	Introduction	605
23.2	Clinical applications of quantitative diffusion mapping	605

23.3	Research applications of diffusion imaging.....	614
23.3.1	Multiple sclerosis (MS).....	614
23.3.2	Amyotrophic lateral sclerosis (ALS).....	617
23.3.3	Dementia.....	620
23.3.4	Psychiatric disorders.....	625
23.4	Summary.....	628
	Conflict of interest.....	628
	Funding.....	628
	References.....	628
CHAPTER 24	Diffusion MRI: Applications Outside the Brain.....	637
	Ricardo Donners, Mihaela Rata, Neil Peter Jerome, Matthew Orton, Matthew Blackledge, Christina Messiou, and Dow-Mu Koh	
24.1	Introduction.....	637
24.2	Principles of diffusion imaging as applied in the body.....	637
24.2.1	General considerations.....	637
24.2.2	Technical considerations.....	638
24.3	Quantitative diffusion mapping.....	642
24.3.1	Quantitative measurements using the monoexponential model.....	642
24.3.2	Nonmonoexponential quantitative measurements.....	644
24.3.3	Whole-body quantitative diffusion measurements: Diffusion volume, global ADC.....	646
24.4	Clinical applications.....	646
24.4.1	Breast cancer.....	646
24.4.2	Head and neck cancers.....	649
24.4.3	Focal liver lesions.....	649
24.4.4	Focal pancreatic lesions.....	650
24.4.5	Renal masses and renal function.....	651
24.4.6	Gynecological tumors.....	652
24.4.7	Prostate cancer.....	653
24.4.8	Bone marrow disease: Myeloma, bone metastases.....	653
24.5	Future developments.....	654
	References.....	655
SECTION 4	Fat and Iron Quantification.....	665
CHAPTER 25	Physical and Physiological Properties of Fat.....	667
	Shigeki Sugii and S. Sendhil Velan	
25.1	Introduction.....	667
25.2	Molecular and cellular characteristics of adipose tissue.....	667
25.3	Adipocyte functions.....	669
25.4	Fat distribution in humans.....	671
25.5	Pathophysiological association.....	673

25.6	Magnetic resonance of adipose tissues.....	674
25.7	Summary.....	675
	References.....	676
CHAPTER 26	Physical and Physiological Properties of Iron.....	681
	Suraj D. Serai, Hansel J. Otero, and Janet L. Kwiatkowski	
26.1	Introduction.....	681
26.2	The form and function of iron in the body.....	681
26.3	Iron balance.....	682
	26.3.1 Absorption.....	684
	26.3.2 Excretion.....	685
	26.3.3 Deposition.....	685
26.4	Iron deficiency.....	685
26.5	Iron overload.....	686
	26.5.1 Causes.....	686
	26.5.2 Iron toxicity.....	686
26.6	Iron accumulation in the liver.....	687
26.7	Iron accumulation in the heart.....	688
26.8	Iron accumulation in other organs.....	689
	26.8.1 Effect of iron overload in hormone-producing endocrine glands.....	689
	26.8.2 Effect of iron overload in the brain.....	689
26.9	Management of patients with iron overload.....	690
26.10	Summary.....	691
	References.....	691
CHAPTER 27	Fat Quantification Techniques.....	695
	Tess Armstrong and Holden H. Wu	
27.1	MR properties of fat.....	695
	27.1.1 T_1 and T_2 of fat.....	695
	27.1.2 Chemical shift of fat.....	696
	27.1.3 Diffusion of fat.....	698
27.2	Quantifying fat using MR spectroscopy.....	699
	27.2.1 Signal model.....	699
	27.2.2 MRS pulse sequences.....	700
	27.2.3 Signal fitting.....	702
	27.2.4 Quantitative measurements.....	703
27.3	Quantifying fat using chemical-shift-encoded MRI.....	703
	27.3.1 Fat-water separation using CSE-MRI.....	704
	27.3.2 CSE-MRI pulse sequences.....	711
	27.3.3 Fat quantification using CSE-MRI.....	711
	27.3.4 Standardized phantoms.....	717

27.4	Emerging CSE-MRI techniques for fat quantification.....	717
27.4.1	Free-breathing Cartesian CSE-MRI fat quantification techniques.....	717
27.4.2	Free-breathing non-Cartesian CSE-MRI fat quantification techniques... ..	721
27.4.3	Advanced CSE-MRI reconstruction and signal modeling.....	724
27.5	Summary and outlook.....	726
	References.....	726
CHAPTER 28	Applications of Fat Mapping.....	735
	Hermien E. Kan, Dimitrios C. Karampinos, and Jürgen Machann	
28.1	Introduction.....	735
28.2	Quantification of abdominal adipose tissue.....	737
28.2.1	Subcutaneous and visceral adipose tissue.....	737
28.2.2	Applications and trends.....	742
28.3	Current applications of fat quantification in organs.....	747
28.3.1	Liver.....	747
28.3.2	Heart, pancreas, kidneys, and brown adipose tissue.....	751
28.4	Current applications of fat quantification in skeletal muscle and bone marrow... ..	756
28.4.1	IMCL and EMCL in skeletal muscle.....	756
28.4.2	Fat infiltration in skeletal muscle.....	759
28.4.3	Bone marrow adipose tissue.....	762
28.5	Future directions and unmet needs.....	763
	References.....	764
CHAPTER 29	Iron Mapping Techniques and Applications.....	779
	Ralf B. Loeffler, Samir D. Sharma, and Claudia M. Hillenbrand	
29.1	Introduction.....	779
29.1.1	Liver.....	779
29.1.2	Other organs.....	780
29.2	R_2^* -based iron quantification.....	780
29.2.1	Liver.....	780
29.2.2	Other organs.....	787
29.3	R_2 -based iron quantification.....	788
29.4	Quantitative susceptibility mapping.....	788
29.4.1	Introduction.....	788
29.4.2	Data acquisition.....	790
29.4.3	Magnetic susceptibility reconstruction.....	790
29.4.4	Postprocessing.....	793
29.4.5	Applications of QSM for iron mapping.....	793
29.5	Future directions.....	794
29.6	Summary.....	796
	References.....	796

SECTION 5	Quantification of Other MRI-Accessible Tissue Properties	805
CHAPTER 30	Electrical Properties Mapping	807
	Ulrich Katscher	
30.1	Electrical properties: Physical and physiological background	807
30.2	Development of EPT	808
30.3	Physical/mathematical background of EPT	809
30.4	EPT measurement methods	810
30.5	Reconstruction algorithms	811
30.6	Limitations and challenges of EPT	814
30.7	Clinical applications	814
30.8	Summary	815
	Acknowledgments	815
	References	815
CHAPTER 31	Quantitative Susceptibility Mapping	819
	Karin Shmueli	
31.1	Physical principles of susceptibility and MRI phase	819
	31.1.1 Susceptibility: What and why?	819
	31.1.2 The relationship between magnetic susceptibility and MRI phase	819
31.2	Imaging methodology and image processing pipeline	821
31.3	Practical considerations and limitations of QSM techniques	825
31.4	Sources of susceptibility contrast and clinical applications of QSM	826
	31.4.1 Tissue iron—Deep-brain structures and dementia	827
	31.4.2 Deoxyhemoglobin and blood iron—Brain oxygenation and microvascular disease	828
	31.4.3 Myelin—Demyelination and microstructure	828
	31.4.4 Other applications	828
	Acknowledgment	829
	References	829
CHAPTER 32	Magnetization Transfer	839
	Tobias C. Wood and Shaihan J. Malik	
32.1	Introduction	839
32.2	Modeling MT effects	840
32.3	Effects of MT on relaxometry	843
	32.3.1 Inversion recovery measurement of R_1	844
	32.3.2 Spin echo measurement of R_2	845
	32.3.3 Steady-state measurements of R_1 and R_2	845
	32.3.4 Outlook: Relaxometry in the presence of MT effects	848

32.4	Quantitative MT approaches.....	848
32.4.1	Continuous wave Z-spectrum measurements.....	849
32.4.2	Pulsed measurements.....	849
32.4.3	Inversion or saturation recovery methods.....	851
32.5	CEST.....	851
32.6	Concluding remarks.....	852
	References.....	852

CHAPTER 33 Chemical Exchange Mapping..... 857

Zhongliang Zu, Moriel Vandsburger, and Phillip Zhe Sun

33.1	Principles of chemical exchange saturation transfer.....	857
33.1.1	Bloch-McConnell equations.....	858
33.1.2	Spinlock theory.....	859
33.1.3	Exchange metrics and parameters.....	859
33.2	CEST MRI pulse sequences and data collection.....	860
33.2.1	Basic CEST MRI sequence design.....	860
33.2.2	Collection of CEST MRI data.....	861
33.3	CEST data analysis.....	861
33.3.1	MTR asymmetry analysis.....	861
33.3.2	Lorentzian fitting.....	864
33.3.3	R_{1w} -scaled inverse analysis.....	865
33.4	Exchange rate mapping.....	866
33.4.1	qCEST with saturation time and power dependency.....	866
33.4.2	Omega plot and generalized omega plot analysis.....	867
33.4.3	Ratiometric analysis.....	868
33.5	CEST contrast agents.....	869
33.5.1	Diamagnetic CEST agents.....	870
33.5.2	paraCEST MRI.....	871
33.6	Applications.....	872
33.6.1	pH-sensitive APT imaging of acute stroke.....	872
33.6.2	CEST imaging of tumor.....	875
33.7	Practical limitations.....	875
33.7.1	SNR efficiency.....	876
33.7.2	Field inhomogeneity correction.....	876
33.7.3	The specificity of CEST measurement.....	877
33.8	Summary.....	877
	References.....	877

CHAPTER 34 MR Thermometry..... 885

Bruno Madore

34.1	Introduction.....	885
34.2	MR thermometry: Theory.....	885

34.3	Proton resonance frequency (PRF) thermometry	886
34.4	Anatomy of traditional PRF thermometry pulse sequences	887
34.5	Improving upon the traditional design	892
34.6	TNR-optimum combination of multiple signals	896
34.7	Dealing with motion and other confounders	897
34.8	Limits of PRF thermometry	898
34.9	Applications and future directions	899
34.10	Conclusion	901
	Acknowledgments	901
	References	901
CHAPTER 35	Motion Encoded MRI and Elastography	907
	Prashant P. Nair and Yogesh K. Mariappan	
35.1	O Motion! Where art thou?	907
35.2	Motion encoding	907
35.2.1	Phase-contrast MRI	907
35.2.2	Spatial modulation of magnetization	908
35.2.3	Displacement encoding with stimulated echoes	909
35.2.4	Strain encoding	910
35.2.5	Applications	912
35.3	Magnetic Resonance Elastography	912
35.3.1	MRE Step 1: introduce shear vibrations into the tissue of interest	914
35.3.2	MRE Step 2: imaging of shear wave propagation	915
35.3.3	MRE Step 3: Quantification of mechanical parameters	916
35.3.4	Applications of MR elastography	918
35.4	Conclusion	925
	References	925
CHAPTER 36	Flow Quantification with MRI	931
	Jacob A. Macdonald and Oliver Wieben	
36.1	Introduction	931
36.2	Principles of flow encoding	931
36.2.1	One-directional flow encoding	931
36.2.2	Two-directional & three-directional flow encoding	934
36.2.3	4D flow MRI	936
36.3	Phase contrast methodology	937
36.3.1	Acquisition	937
36.3.2	Reconstruction & visualization	940
36.3.3	Hemodynamic analysis	942
36.3.4	Confounding factors and artifacts	944

36.4	Applications	947
36.4.1	Cardiac	947
36.4.2	Cranial	948
36.4.3	Abdominal	948
36.5	Summary	948
	References	948

CHAPTER 37 Hyperpolarized Magnetic Resonance Spectroscopy and Imaging 953

Thomas R. Eykyn

37.1	Introduction	953
37.2	Principles of hyperpolarization—Basic concepts and sensitivity	954
37.3	Hyperpolarization technologies	957
37.4	System set-up for hyperpolarized ^{13}C	959
37.5	Imaging hyperpolarized substrates	960
37.6	Quantifying temporal kinetics	965
37.7	Conservation of mass	968
37.8	Applications of hyperpolarized ^{13}C MRI	968
37.9	Application of hyperpolarized gases	971
37.10	Summary	971
	Acknowledgments	971
	References	972
