INTRODUCTION	1
About This Book	1
Conventions Used in This Book	2
What You're Not to Read	2
Foolish Assumptions	3
Icons Used in This Book	3
Beyond the Book	4
Where to Go from Here	4
PART 1: GETTING STARTED WITH GEOMETRY BASICS	5
CHAPTER 1: Introducing Geometry	7
Studying the Geometry of Shapes	8
One-dimensional shapes	8
Two-dimensional shapes	8
Three-dimensional shapes	10
Getting Acquainted with Geometry Proofs	10
Easing into proofs with an everyday example	11
Turning everyday logic into a proof	12
Sampling a simple geometrical proof	13
When Am I Ever Going to Use This?	14
When you'll use your knowledge of shapes	14
When you'll use your knowledge of proofs	15
Why You Won't Have Any Trouble with Geometry	16
CHAPTER 2: Building Your Geometric Foundation	17
Getting Down with Definitions	17
A Few Points on Points	21
Lines, Segments, and Rays Pointing Every Which Way	22
Singling out horizontal and vertical lines	22
Doubling up with pairs of lines	23
Investigating the Plane Facts	25
Everybody's Got an Angle	26
Goldilocks and the three angles: Small, large, and just "right"	26
Angle pairs: Often joined at the hip	28

CHAPTER 3:	Sizing Up Segments and Analyzing Angles	31
	Measuring Segments and Angles	31
	Measuring segments	32
	Measuring angles	33
	Adding and Subtracting Segments and Angles	36
	Cutting in Two or Three: Bisection and Trisection	37
	Bisecting and trisecting segments	37
	Bisecting and trisecting angles	38
	Proving (Not Jumping to) Conclusions about Figures	40
 PART 2: INTRODUCING PROOFS		43
 CHAPTER 4:	 Prelude to Proofs	 45
	Getting the Lay of the Land: The Components of a Formal Geometry Proof	46
	Reasoning with If-Then Logic	48
	If-then chains of logic	48
	You've got your reasons: Definitions, theorems, and postulates	49
	Bubble logic for two-column proofs	51
	Horsing Around with a Two-Column Proof	52
 CHAPTER 5:	 Your Starter Kit of Easy Theorems and Short Proofs	 55
	Doing Right and Going Straight: Complementary and Supplementary Angles	56
	Addition and Subtraction: Eight No-Big-Deal Theorems	59
	Addition theorems	59
	Subtraction theorems	63
	Like Multiples and Like Divisions? Then These Theorems Are for You!	66
	The X-Files: Congruent Vertical Angles Are Out There	69
	Pulling the Switch with the Transitive and Substitution Properties	71
 CHAPTER 6:	 The Ultimate Guide to Tackling a Longer Proof	 75
	Making a Game Plan	76
	Using All the Givens	77
	Making Sure You Use If-Then Logic	78
	Chipping Away at the Problem	79
	Jumping Ahead and Working Backward	81
	Filling In the Gaps	83
	Writing Out the Finished Proof	84

PART 3: TRIANGLES: POLYGONS OF THE THREE-SIDED VARIETY87

CHAPTER 7: Grasping Triangle Fundamentals 89

Taking In a Triangle's Sides89

- Scalene triangles: Akilter, awry, and askew90
- Isosceles triangles: Nice pair o' legs91
- Equilateral triangles: All parts are created equal92

Introducing the Triangle Inequality Principle92

Getting to Know Triangles by Their Angles94

Sizing Up Triangle Area94

- Scaling altitudes95
- Determining a triangle's area96

Locating the "Centers" of a Triangle100

- Balancing on the centroid100
- Finding three more "centers" of a triangle103

CHAPTER 8: Regarding Right Triangles 107

Applying the Pythagorean Theorem108

Perusing Pythagorean Triple Triangles113

- The Fab Four Pythagorean triple triangles114
- Families of Pythagorean triple triangles116

Getting to Know Two Special Right Triangles118

- The 45°- 45°- 90° triangle — half a square119
- The 30°- 60°- 90° triangle — half of an equilateral triangle120

CHAPTER 9: Completing Congruent Triangle Proofs 125

Introducing Three Ways to Prove Triangles Congruent126

- SSS: Using the side-side-side method127
- SAS: Taking the side-angle-side approach128
- ASA: Taking the angle-side-angle tack131

CPCTC: Taking Congruent Triangle Proofs a Step Further133

- Defining CPCTC133
- Tackling a CPCTC proof134

Eying the Isosceles Triangle Theorems137

Trying Out Two More Ways to Prove Triangles Congruent139

- AAS: Using the angle-angle-side theorem139
- HLR: The right approach for right triangles142

Going the Distance with the Two Equidistance Theorems143

- Determining a perpendicular bisector144
- Using a perpendicular bisector145

Making a Game Plan for a Longer Proof147

Running a Reverse with Indirect Proofs149

PART 4: POLYGONS OF THE FOUR-OR-MORE-SIDED VARIETY	153
CHAPTER 10: The Seven Wonders of the Quadrilateral World	155
Getting Started with Parallel-Line Properties	156
Crossing the line with transversals: Definitions and theorems.	156
Applying the transversal theorems.	157
Working with more than one transversal	160
Meeting the Seven Members of the Quadrilateral Family.	161
Looking at quadrilateral relationships	163
Working with auxiliary lines	164
Giving Props to Quads: The Properties of Quadrilaterals	166
Properties of the parallelogram	166
Properties of the three special parallelograms.	170
Properties of the kite	173
Properties of the trapezoid and the isosceles trapezoid.	175
CHAPTER 11: Proving That You Have a Particular Quadrilateral	177
Putting Properties and Proof Methods Together	178
Proving That a Quadrilateral Is a Parallelogram	180
Surefire ways of ID-ing a parallelogram.	180
Trying some parallelogram proofs	181
Proving That a Quadrilateral Is a Rectangle, Rhombus, or Square	184
Rewving up for rectangle proofs	185
Waxing rhapsodic about rhombus proofs.	187
Squaring off with square proofs	188
Proving That a Quadrilateral Is a Kite	189
CHAPTER 12: Polygon Formulas: Area, Angles, and Diagonals	193
Calculating the Area of Quadrilaterals	193
Setting forth the quadrilateral area formulas.	194
Getting behind the scenes of the formulas.	194
Trying a few area problems	196
Finding the Area of Regular Polygons	201
Presenting polygon area formulas	201
Tackling more area problems	202
Using Polygon Angle and Diagonal Formulas	205
Interior and exterior design: Exploring polygon angles.	206
Handling the ins and outs of a polygon angle problem.	207
Criss-crossing with diagonals.	208

CHAPTER 13: Similarity: Same Shape, Different Size	211
Getting Started with Similar Figures.....	212
Defining and naming similar polygons.....	212
How similar figures line up.....	213
Solving a similarity problem.....	215
Proving Triangles Similar.....	217
Tackling an AA proof.....	218
Using SSS~ to prove triangles similar.....	219
Working through an SAS~ proof.....	221
CASTC and CSSTP, the Cousins of CPCTC.....	222
Working through a CASTC proof.....	222
Taking on a CSSTP proof.....	223
Splitting Right Triangles with the Altitude-on-Hypotenuse Theorem.....	224
Getting Proportional with Three More Theorems.....	227
The side-splitter theorem: It'll make you split your sides.....	227
Crossroads: The side-splitter theorem extended.....	229
The angle-bisector theorem.....	231

PART 5: WORKING WITH NOT-SO-VICIOUS CIRCLES..... 235

CHAPTER 14: Coming Around to Circle Basics	237
The Straight Talk on Circles: Radii and Chords.....	238
Defining radii, chords, and diameters.....	238
Introducing five circle theorems.....	238
Working through a proof.....	239
Using extra radii to solve a problem.....	240
Pieces of the Pie: Arcs and Central Angles.....	243
Three definitions for your mathematical pleasure.....	243
Six scintillating circle theorems.....	244
Trying your hand at some proofs.....	245
Going Off on a Tangent about Tangents.....	247
Introducing the tangent line.....	248
The common-tangent problem.....	249
Taking a walk on the wild side with a walk-around problem.....	251
CHAPTER 15: Circle Formulas and Theorems	255
Chewing on the Pizza Slice Formulas.....	256
Determining arc length.....	256
Finding sector and segment area.....	259
Pulling it all together in a problem.....	261
Digesting the Angle-Arc Theorems and Formulas.....	262
Angles on a circle.....	262
Angles inside a circle.....	265

	Angles outside a circle	266
	Keeping your angle-arc formulas straight	269
	Powering Up with the Power Theorems	270
	Striking a chord with the chord-chord power theorem	270
	Touching on the tangent-secant power theorem	272
	Seeking out the secant-secant power theorem	272
	Condensing the power theorems into a single idea	275
	PART 6: GOING DEEP WITH 3-D GEOMETRY	277
	CHAPTER 16: 3-D Space: Proofs in a Higher Plane of Existence	279
	Lines Perpendicular to Planes	279
	Parallel, Perpendicular, and Intersecting Lines and Planes	283
	The four ways to determine a plane	283
	Line and plane interactions	284
	CHAPTER 17: Getting a Grip on Solid Geometry	287
	Flat-Top Figures: They're on the Level	287
	Getting to the Point of Pointy-Top Figures	293
	Rounding Things Out with Spheres	299
	PART 7: PLACEMENT, POINTS, AND PICTURES: ALTERNATIVE GEOMETRY TOPICS	303
	CHAPTER 18: Coordinate Geometry	305
	Getting Coordinated with the Coordinate Plane	305
	The Slope, Distance, and Midpoint Formulas	307
	The slope dope	307
	Going the distance with the distance formula	310
	Meeting each other halfway with the midpoint formula	311
	The whole enchilada: Putting the formulas together in a problem	312
	Proving Properties Analytically	314
	Step 1: Drawing a general figure	314
	Step 2: Solving the problem algebraically	316
	Deciphering Equations for Lines and Circles	318
	Line equations	318
	The standard circle equation	319
	CHAPTER 19: Changing the Scene with Geometric Transformations	323
	Some Reflections on Reflections	324
	Getting oriented with orientation	325
	Finding a reflecting line	326

Not Getting Lost in Translations	328
A translation equals two reflections	329
Finding the elements of a translation	330
Turning the Tables with Rotations	333
A rotation equals two reflections	334
Finding the center of rotation and the equations of two reflecting lines	334
Third Time's the Charm: Stepping Out with Glide Reflections	338
A glide reflection equals three reflections	338
Finding the main reflecting line	339
CHAPTER 20: Locating Loci and Constructing Constructions	343
Loci Problems: Getting in with the Right Set	344
The four-step process for locus problems	344
Two-dimensional locus problems	345
Three-dimensional locus problems	350
Drawing with the Bare Essentials: Constructions	351
Three copying methods	352
Bisecting angles and segments	355
Two perpendicular line constructions	357
Constructing parallel lines and using them to divide segments	358
PART 8: THE PART OF TENS	361
CHAPTER 21: Ten Things to Use as Reasons in Geometry Proofs	363
The Reflexive Property	363
Vertical Angles Are Congruent	364
The Parallel-Line Theorems	364
Two Points Determine a Line	365
All Radii of a Circle Are Congruent	365
If Sides, Then Angles	366
If Angles, Then Sides	366
The Triangle Congruence Postulates and Theorems	366
CPCTC	367
The Triangle Similarity Postulates and Theorems	367
CHAPTER 22: Ten Cool Geometry Problems	369
Eureka! Archimedes's Bathtub Revelation	369
Determining Pi	370
The Golden Ratio	371
The Circumference of the Earth	372

The Great Pyramid of Khufu	373
Distance to the Horizon	373
Projectile Motion	373
Golden Gate Bridge	374
The Geodesic Dome	375
A Soccer Ball	375

INDEX	377
--------------------	-----
