Contents

1 Introduction 1

1.1 Some Experimental Evidence 1
1.2 Logic 12
1.3 Probability 18
Chapter Summary 27
Further Reading 28
Exercises 29

2 Reasoning About Measurements 31

2.1 Testable Propositions 31
2.2 Reachable States 40
2.3 Maximal Knowledge 48
2.4 The Operations AND and OR 54
2.5 Composition 59
2.6 Exchangeable Assemblies 66
2.7 Measuring a State 71
2.8 Preparing a State 77
Chapter Summary 82
Further Reading 84
Exercises 84

3 Probability in Hilbert Space 93

3.1 Linear Algebra in a Nutshell 93
3.2 Propositions and States 102
3.3 Two-Level System 110
3.4 Observables and Transformations 119
3.5 Composite Systems 127
3.6 The Issue of Reality 135
3.7 Classical Limit 142
Chapter Summary 150
Further Reading 151
Exercises 152

4 Computation 168
4.1 Gates and Circuits 168
4.2 Universality 179
4.3 Measurement-Based Computation 187
4.4 Deutsch–Jozsa Algorithm 190
4.5 Ground States and Classical Optimization 194
4.6 Simulation 201
4.7 High-Precision Measurement 206
Chapter Summary 212
Further Reading 213
Exercises 214

5 Communication 223
5.1 Classical Information 223
5.2 Quantum Information 230
5.3 Cryptography 237
5.4 Superdense Coding and Teleportation 241
Chapter Summary 245
Further Reading 246
Exercises 247
