Contents

PREFACE xv

1 THE STATISTICAL FOUNDATION 1

1.1 Decision Theory 1

1.1.1 Bayes's Rule, 3
1.1.2 Minimizing Average Cost, 6

1.2 Binary Decisions 8

1.2.1 Bayes Strategy, 8
1.2.2 Neyman–Pearson Criterion, 10
1.2.3 Operating Characteristic, 12
1.2.4 Sufficient Statistics, 14
1.2.5 Decisions Based on Discrete Random Variables, 18

Problems 23

2 DETECTION OF A KNOWN SIGNAL 27

2.1 Gaussian Noise 27

2.1.1 The Density Functions of Gaussian Noise, 28
2.1.2 Stationary Noise, 30
2.1.3 Sampling by Orthonormal Functions, 31
2.1.4 Gram–Schmidt Orthogonalization, 33

2.1.5 White Noise, 34
2.1.6 The Karhunen–Loève Expansion, 37
2.1.7 Reproducing-kernel Hilbert Space, 40

2.2 Detection in Gaussian Noise 42

2.2.1 The Likelihood Ratio, 42
2.2.2 The Sufficient Statistic, 44
2.2.3 The Matched Filter, 49
2.2.4 The Irrelevance Proof, 57
2.2.5 Discrete-time Processing, 58

2.3 Solution of the Integral Equations 60

2.3.1 Inhomogeneous Equations, 60
2.3.2 Homogeneous Equations, 65

2.4 Physical Interpretation of the Signal-to-noise Ratio, 68

2.4.1 The Transmission-line Model, 69
2.4.2 The Circuit Model, 71

2.5 Decisions among a Number of Known Signals 74

2.5.1 Signal Space, 74
2.5.2 Displacement of the Signal Vectors, 79
2.5.3 Orthogonal and Simplex Signals, 79

Problems 81

3 NARROWBAND SIGNALS AND THEIR DETECTION 88

3.1 Narrowband Signals and Filters 88

3.2 Narrowband Noise 95

3.2.1 The Complex Representation, 95
3.2.2 The Complex Autocovariance Function, 97
3.2.3 Circular Gaussian Random Processes, 100
3.2.4 Narrowband White Noise, 103

3.3 Detection of a Signal of Random Phase 104

3.3.1 The Likelihood Functional for a Narrowband Input, 104
3.3.2 Signals of Random Phase, 107

3.4 The Detectability of Signals of Unknown Phase 110

3.5 Narrowband Signals in Communications 113

3.5.1 The Binary Incoherent Channel, 113
3.5.2 The Balanced Binary Incoherent Channel, 116
3.5.3 The Unilateral Binary Incoherent Channel, 117
3.5.4 The Incoherent M-ary Channel, 118

3.6 Testing Composite Hypotheses 119

3.6.1 The Bayes Criterion, 119

3.6.2 The Extended Neyman–Pearson Criterion, 123
3.6.3 Detection of Signals of Unknown Amplitude, 125
3.6.4 Maximum-likelihood Detection, 128

Problems 132

4 DETECTION IN MULTIPLE OBSERVATIONS 136

4.1 Optimum Detector 136

4.1.1 Complete Coherence, 138
4.1.2 Incoherent Signals, 140

4.2 The Threshold Detector 142

4.2.1 The Weak-signal Approximation, 142
4.2.2 Performance of the Quadratic Threshold Detector, 144
4.2.3 Detection Probability for Rayleigh Fading, 147
4.2.4 Other Types of Fading Signals, 151

4.3 Beamforming 156

4.3.1 Detection by an Array of Transducers, 156
4.3.2 Elimination of Noise from a Point Source, 161

4.4 Comparison of Receiver Performance 165

4.4.1 Asymptotic Relative Efficiency, 165
4.4.2 Threshold Detection, 169
4.4.3 Comparison of the Linear and the Quadratic Detector, 171
4.4.4 Invariable Parameters Unknown, 172

4.5 Distributed Detection 174

4.5.1 Identical Independent Sensors, 175
4.5.2 Nonidentical Independent Sensors, 180

Problems 185

5 EVALUATING SIGNAL DETECTABILITY 188

5.1 The Edgeworth Series 188

5.1.1 The Moment-generating Function, 188
5.1.2 The Gram–Charlier and Edgeworth Series, 190

5.2 Numerical Laplace Inversion 195

5.2.1 Integration through a Saddlepoint, 195
5.2.2 Integration on a Curved Path, 201
5.2.3 Integer-valued Random Variables, 207

5.3 Approximations 211

5.3.1 The Chernoff Bound, 211
5.3.2 The Saddlepoint Approximation, 213

5.3.3 Calculating Approximate Decision Levels for the Neyman–Pearson Criterion, 215
5.3.4 Calculating Decision Levels for the Bayes Criterion, 217
5.3.5 The Uniform Asymptotic Expansion, 217

Problems 218

6 ESTIMATION OF SIGNAL PARAMETERS 220

6.1 The Theory of Estimation 220

6.1.1 Maximum-a-posteriori-probability Estimators, 222
6.1.2 Maximum-likelihood Estimators, 223
6.1.3 Estimating the Mean of a Gaussian Distribution, 224
6.1.4 Jointly Gaussian Parameters and Data, 226
6.1.5 Bayes Estimates, 227
6.1.6 The Quadratic Cost Function, 228
6.1.7 The Principle of Orthogonality, 230

6.2 Estimation of Signal Parameters 232

6.2.1 Maximum-likelihood Estimators, 232
6.2.2 Estimation of Arrival Time, 233
6.2.3 Asymptotic Variance of Maximum-likelihood Estimators, 236
6.2.4 The Cramér–Rao Inequality, 239
6.2.5 Estimation of Signal Parameters in Gaussion Noise, 242
6.2.6 The Ziv–Zakai Bound, 244

6.3 Estimation of Parameters of a Narrowband Signal 246

6.3.1 Arrival Time, 246
6.3.2 Signal Arrival Time and Carrier Frequency, 249
6.3.3 The Complex Ambiguity Function, 253
6.3.4 Calculation of the Error Covariances, 255
6.3.5 Coherent Pulse Trains, 259

Problems 262

7 DETECTION OF SIGNALS WITH UNKNOWN PARAMETERS 266

7.1 Unknown Arrival Time: The Threshold Detector 266

7.2 Unknown Arrival Time: The Maximum-likelihood Detector 272

7.3 False-alarm Rate 273

7.3.1 The First-passage Time Problem, 273
7.3.2 The Crossing-rate Approximation, 275
7.3.3 The Crossing Rate of a Stochastic Process, 276
7.3.4 The Crossing Rate of the Rectified Process, 278

7.4 Unknown Arrival Time: The Probability of Detection 281

7.5 Signals of Unknown Arrival Time and Carrier Frequency 282

7.6 The Least Favorable Distribution 286

7.6.1 The Extended Neyman–Pearson Criterion, 286
7.6.2 The Threshold Detector, 296
7.6.3 Narrowband Signals in Gaussian Noise, 298

Problems 301

8 DETECTION OF SIGNALS UNDER CONDITIONS OF UNCERTAINTY 304

8.1 Detection in Noise of Unknown Strength 304

8.1.1 The CFAR Receiver, 304
8.1.2 False-alarm Probability, 306
8.1.3 The Probability of Detection, 308
8.1.4 Colored Interference of Unknown Spectral Density, 311

8.2 Nonparametric Detection 314

8.2.1 Parametric and Nonparametric Hypotheses, 314
8.2.2 Nonparametric Receivers, 316
8.2.3 The t-Test, 318
8.2.4 The Sign Test, 320
8.2.5 Rank Tests, 325
8.2.6 Receivers with a Reference Input, 330
8.2.7 Two-input Systems, 331

Problems 332

9 SEQUENTIAL DETECTION 336

9.1 The Sequential Probability Ratio Test 336

9.2 Performance of the Sequential Test 341

9.2.1 The Detection Probability, 342
9.2.2 The Average Sample Number, 344

9.3 Sequential Detection of Signals of Random Phase 347

9.4 Sequential Detection of Targets of Unknown Distance 350

Problems 354

10 SIGNAL RESOLUTION 356

10.1 Specification of Receivers 356

10.1.1 Varieties of Resolution, 356
10.1.2 The Resolution of Two Signals, 357
10.1.3 The Resolution of Many Signals, 363

10.2 The Detection of Signals in Clutter 369

APPENDIX B: CIRCULAR GAUSSIAN DENSITY FUNCTIONS 519

APPENDIX C: Q FUNCTION 523

C.1 Properties 523

C.2 *M*th-order *Q* Function 526

C.3 Computation by Recurrence 528

APPENDIX D: ERROR PROBABILITY FOR A CHANNEL CARRYING TWO NONORTHOGONAL SIGNALS WITH RANDOM PHASES 531

APPENDIX E: RECURSIVE METHODS FOR DETECTION PROBABILITIES: FADING SIGNALS AND RANDOM DECISION LEVELS 537

E.1 Fading Signals 537

E.2 Random Decision Level, Fixed Signal Strengths 538

E.3 Random Signal Strengths and Random Decision Level 539

E.4 False-alarm Probability, Random Decision Level 540

APPENDIX F: PULSE REFLECTED FROM A MOVING TARGET 542

APPENDIX G: ASYMPTOTIC RELATIVE EFFICIENCY OF THE RANK TEST 545

APPENDIX H: PROBABILITY OF DETECTION: LORENTZ SPECTRAL DENSITY 547

H.1 The Residue Series 547

H.2 The Saddlepoint Method 549

H.3 The Toeplitz Approximation 550

APPENDIX I: DERIVATION OF THE KALMAN–BUCY EQUATIONS 553

APPENDIX J: MOMENT-GENERATING FUNCTION: COHERENT PLUS STOCHASTIC SIGNAL 555

BIBLIOGRAPHY 558

INDEX 575
