

CONTENTS

PREFACE xvii

A NOTE TO STUDENTS xxi

A NOTE TO THE INSTRUCTOR xxiii

CHAPTER ONE Stress

- 1.0 Overview 1
- 1.1 Stress on a Surface 2
 - 1.1.1 Normal Stress 2
 - 1.1.2 Shear Stress 5
 - 1.1.3 Internally Distributed Force Systems 10
- Quick Test 1.1 23
- Problem Set 1.1 24
- 1.2 Stress at a Point 32
 - 1.2.1 Stress Elements 34
 - 1.2.2 Plane Stress 36
 - 1.2.3 Symmetric Shear Stresses 37
- Quick Test 1.2 41
- Problem Set 1.2 42
- *1.3 General Information 46
- 1.4 Closure 48
 - Points and Formulas to Remember 49

CHAPTER TWO Strain

- 2.0 Overview 51
- 2.1 Displacement and Deformation 52
- 2.2 Lagrangian and Eulerian Strain 52

*This section contains advanced material and can be omitted without loss of the basic content of the course.

2.3	Average Strain	53
2.3.1	Normal Strain	53
2.3.2	Shear Strain	54
2.3.3	Units of Average Strain	55
2.4	Small-Strain Approximation	59
*2.4.1	Vector Approach to Small-Strain Approximation	61
	Problem Set 2.1	70
2.5	Strain Components	74
2.5.1	Plane Strain	75
2.6	Strain at a Point	77
2.6.1	Strain at a Point on a Line	78
	Quick Test 2.1	80
	Problem Set 2.2	81
*2.7	General Information	83
2.7.1	Moiré Fringe Method	83
2.8	Closure	84
	Points and Formulas to Remember	85

CHAPTER THREE

Mechanical Properties of Materials

3.0	Overview	87
3.1	Material Characterization	88
3.1.1	Tension Test	88
3.1.2	Material Constants	92
3.1.3	Compression Test	95
*3.1.4	Strain Energy	99
3.1.5	Linear Strain Energy Density	100
3.2	Logic in Mechanics of Materials	103
	Quick Test 3.1	110
	Problem Set 3.1	111
3.3	Isotropy and Homogeneity	116
3.4	Generalized Hooke's Law for Isotropic Materials	118
3.5	Plane Stress and Plane Strain	120
	Quick Test 3.2	125
	Problem Set 3.2	125
3.6	Failure and Factor of Safety	128
*3.7	Stress Concentration	132
*3.8	Saint-Venant's Principle	134
*3.9	Effect of Temperature	136
*3.10	Fatigue	140

- *3.11 Nonlinear Material Models 143
 - 3.11.1 Elastic–Perfectly Plastic Material Model 144
 - 3.11.2 Linear Strain-Hardening Material Model 145
 - 3.11.3 Power-Law Model 146
- Problem Set 3.3 153
- *3.12 General Information 157
 - 3.12.1 History 157
 - 3.12.2 Material Groups 159
 - 3.12.3 Composite Materials 159
- 3.13 Closure 160
 - Points and Formulas to Remember 161

CHAPTER FOUR

Axial Members

- 4.0 Overview 163
- 4.1 Theory 164
 - 4.1.1 Kinematics 165
 - 4.1.2 Strain Distribution 166
 - 4.1.3 Material Model 166
 - 4.1.4 Internal Axial Force 167
 - 4.1.5 Location of Origin 167
 - 4.1.6 Axial Formulas 168
 - 4.1.7 Axial Stresses and Strains 170
 - 4.1.8 Axial Force Diagram 177
 - *4.1.9 General Approach to Distributed Axial Forces 186
- Quick Test 4.1 188
- Problem Set 4.1 189
- *4.2 Composite Bars 194
 - Problem Set 4.2 204
- 4.3 Structural Analysis 205
 - 4.3.1 Statically Indeterminate Structures 206
 - 4.3.2 Force Method, or Flexibility Method 207
 - 4.3.3 Displacement Method, or Stiffness Method 207
 - 4.3.4 General Procedure for Indeterminate Structure 208
- Problem Set 4.3 219
- *4.4 Initial Stress or Strain 224
- *4.5 Temperature Effects 228
 - Problem Set 4.4 232
- *4.6 Elastic–Perfectly Plastic Axial Members 233
- *4.7 Stress Approximation 238
 - 4.7.1 Free Surface 238
 - 4.7.2 Thin Bodies 239
 - 4.7.3 Axisymmetric Bodies 239
 - 4.7.4 Limitations 240

- *4.8 Thin-Walled Pressure Vessels 241
 - 4.8.1 Cylindrical Vessels 242
 - 4.8.2 Spherical Vessels 243
- Problem Set 4.5 246
- *4.9 General Information 247
- 4.10 Closure 249
 - Points and Formulas to Remember 250

CHAPTER FIVE

Torsion of Shafts

- 5.0 Overview 252
- 5.1 Prelude to Theory 253
 - 5.1.1 Internal Torque 259
- Problem Set 5.1 263
- 5.2 Theory 264
 - 5.2.1 Kinematics 265
 - 5.2.2 Material Model 268
 - 5.2.3 Internal Torque Sign Convention 269
 - 5.2.4 Torsion Formulas 269
 - 5.2.5 Torsional Stresses and Strains 271
 - 5.2.6 Torque Diagram 277
 - *5.2.7 General Approach to Distributed Torque 288
- Quick Test 5.1 291
- Problem Set 5.2 291
- 5.3 Statically Indeterminate Shafts 296
- *5.4 Composite Shafts 302
 - Problem Set 5.3 310
- *5.5 Elastic–Perfectly Plastic Circular Shafts 313
 - 5.5.1 Residual Shear Stress 314
- *5.6 Torsion of Thin-Walled Tubes 322
 - Problem Set 5.4 325
- *5.7 General Information 328
- 5.8 Closure 329
 - Points and Formulas to Remember 329

CHAPTER SIX

Symmetric Bending of Beams

- 6.0 Overview 331
- 6.1 Prelude to Theory 332
 - 6.1.1 Internal Bending Moment 338
- Problem Set 6.1 343

6.2	Theory	344
6.2.1	Kinematics	346
6.2.2	Strain Distribution	348
6.2.3	Material Model	349
6.2.4	Location of Neutral Axis	349
6.2.5	Internal Shear Force, Moment, and Sign Conventions	351
6.2.6	Flexure Formulas	355
	Problem Set 6.2	361
6.3	Shear and Moment by Equilibrium	365
6.4	Shear and Moment Diagrams	373
6.4.1	Distributed Force	373
6.4.2	Point Force and Moments	375
6.4.3	Construction of Shear and Moment Diagrams	376
6.5	Beam Design Issues	378
6.5.1	Section Modulus	378
6.5.2	Maximum Tensile and Compressive Bending Normal Stresses	379
	Quick Test 6.1	388
	Problem Set 6.3	389
6.6	Shear Stress in Thin Symmetric Beams	392
6.6.1	Shear Stress Direction	392
6.6.2	Bending Shear Stress Formula	397
6.6.3	Calculation of Q_z	399
6.6.4	Shear Flow Formula	400
6.6.5	Bending Stresses and Strains	401
	Problem Set 6.4	413
*6.7	Composite Beams	417
6.7.1	Normal Bending Stress in Composite Beams	418
6.7.2	Location of Neutral Axis in Composite Beams	419
6.7.3	Bending Shear Stress in Composite Beams	419
6.7.4	Cross-Section Transformation Method	420
*6.8	Elastic–Perfectly Plastic Beams	433
	Problem Set 6.5	442
*6.9	General Information	446
6.10	Closure	448
	Points and Formulas to Remember	449

CHAPTER SEVEN

Deflection of Symmetric Beams

7.0	Overview	451
7.1	Second-Order Boundary-Value Problem	452
7.1.1	Boundary Conditions	452
7.1.2	Continuity Conditions	453
	Problem Set 7.1	466

7.2	Fourth-Order Boundary-Value Problem	467
7.2.1	Boundary Conditions	468
7.2.2	Continuity and Jump Conditions	469
7.2.3	Use of Template in Boundary Conditions or Jump Conditions	469
	Problem Set 7.2	481
*7.3	Superposition	484
*7.4	Deflection by Discontinuity Functions	490
7.4.1	Discontinuity Functions	490
7.4.2	Use of Discontinuity Functions	492
*7.5	Area-Moment Method	501
	Problem Set 7.3	506
*7.6	General Information	507
7.7	Closure	508
	Points and Formulas to Remember	510

CHAPTER EIGHT

Stress Transformation

8.0	Overview	512
8.1	Prelude to Theory: The Wedge Method	513
	Problem Set 8.1	522
8.2	Stress Transformation by Method of Equations	524
8.2.1	Maximum Normal Stress	525
8.2.2	In-Plane Maximum Shear Stress	528
8.2.3	Maximum Shear Stress	529
	Quick Test 8.1	532
8.3	Stress Transformation by Mohr's Circle	533
8.3.1	Construction of Mohr's Circle	533
8.3.2	Principal Stresses from Mohr's Circle	534
8.3.3	Maximum In-Plane Shear Stress	535
8.3.4	Maximum Shear Stress	535
8.3.5	Stresses on an Inclined Plane	535
8.3.6	Principal Stress Element	536
	Quick Test 8.2	548
	Problem Set 8.2	550
	Quick Test 8.3	553
*8.4	General Information	554
8.4.1	Photoelasticity	554
8.5	Closure	555
	Points and Formulas to Remember	556

CHAPTER NINE

Strain Transformation

- 9.0 Overview 558
- 9.1 Prelude to Theory 559
 - 9.1.1 Line Method 559
 - 9.1.2 Visualizing Principal Strain Directions 562
- Problem Set 9.1 565
- 9.2 Method of Equations 566
 - 9.2.1 Principal Strains 570
 - 9.2.2 Maximum Shear Strain 571
- 9.3 Mohr's Circle 578
 - 9.3.1 Construction of Mohr's Circle for Strains 578
 - 9.3.2 Strains in a Specified Coordinate System 580
- Quick Test 9.1 584
- 9.4 Generalized Hooke's Law in Principal Coordinates 585
 - Problem Set 9.2 592
- 9.5 Strain Gages 595
 - Quick Test 9.2 605
 - Problem Set 9.3 606
- *9.6 General Information 609
- 9.7 Closure 610
 - Points and Formulas to Remember 611

CHAPTER TEN

Design and Failure

- 10.0 Overview 613
- 10.1 Combined Loading 614
 - 10.1.1 Combined Axial and Torsional Loading 615
 - 10.1.2 Combined Axial, Torsional, and Bending Loads about z Axis 617
 - 10.1.3 Extension to Symmetric Bending about y Axis 618
 - 10.1.4 Combined Axial, Torsional, and Bending Loads about y and z Axes 619
 - 10.1.5 Stress and Strain Transformation 621
 - 10.1.6 Important Points 621
 - 10.1.7 General Procedure for Combined Loading 622
- *10.2 Analysis and Design of Structures 645
 - 10.2.1 Failure Envelope 646
- Problem Set 10.1 660
- *10.3 Stress Intensity Factor 667

*10.4	Failure Theories	672
10.4.1	Maximum Shear Stress Theory	673
10.4.2	Maximum Distortion Energy Theory	673
10.4.3	Maximum Normal Stress Theory	675
10.4.4	Mohr's Theory	675
	Problem Set 10.2	680
*10.5	General Information	683
10.5.1	Reliability	683
10.5.2	Load and Resistance Factor Design (LRFD)	684
10.6	Closure	685
	Points and Formulas to Remember	686

CHAPTER ELEVEN

Stability of Columns

11.0	Overview	687
11.1	Buckling Phenomenon	688
11.2	Euler Buckling	690
11.2.1	Effects of End Conditions	693
*11.3	Imperfect Columns	704
	Quick Test 11.1	711
	Problem Set 11.1	711
*11.4	General Information	717
11.5	Closure	718
	Points and Formulas to Remember	719

Appendixes

APPENDIX A STATICS REVIEW

A.0	Overview	721
A.1	Types of Forces and Moments	721
A.1.1	External Forces and Moments	721
A.1.2	Reaction Forces and Moments	722
A.1.3	Internal Forces and Moments	723
A.2	Free-Body Diagrams	723
A.3	Trusses	725
A.4	Centroids	725
A.5	Area Moments of Inertia	726

- A.6 Statically Equivalent Load Systems 728
 - A.6.1 Distributed Force on a Line 729
 - A.6.2 Distributed Force on a Surface 729
- Quick Test A.1 731
- Static Review Exam 1 732
- Static Review Exam 2 733
- Points to Remember 734

APPENDIX B ALGORITHMS FOR NUMERICAL METHODS

- B.1 Numerical Integration 735
 - B.1.1 Algorithm for Numerical Integration 736
 - B.1.2 Use of Spreadsheet for Numerical Integration 736
- B.2 Root of a Function 737
 - B.2.1 Algorithm for Finding the Root of an Equation 738
 - B.2.2 Use of Spreadsheet for Finding the Root of a Function 738
- B.3 Determining Coefficients of a Polynomial 739
 - B.3.1 Algorithm for Finding Polynomial Coefficients 741
 - B.3.2 Use of Spreadsheet for Finding Polynomial Coefficients 741

APPENDIX C CHARTS OF STRESS CONCENTRATION FACTORS

- C.1 Finite Plate with a Central Hole 743
- C.2 Stepped Axial Circular Bars with Shoulder Fillet 744
- C.3 Stepped Circular Shafts with Shoulder Fillet in Torsion 744
- C.4 Stepped Circular Beam with Shoulder Fillet in Bending 745

APPENDIX D PROPERTIES OF SELECTED MATERIALS

- Table D.1 Material Properties in U.S. Customary Units 746
- Table D.2 Material Properties in Metric Units 747

APPENDIX E GEOMETRIC PROPERTIES OF STRUCTURAL STEEL MEMBERS

- Table E.1 Wide-Flange Sections (FPS Units) 748
- Table E.2 Wide-Flange Sections (Metric Units) 748
- Table E.3 S Shapes (FPS Units) 749
- Table E.4 S Shapes (Metric Units) 749

APPENDIX F SOLUTIONS TO STATIC REVIEW EXAM 750

APPENDIX G ANSWERS TO QUICK TESTS 754

APPENDIX H ANSWERS TO PROBLEMS 763

INDEX 768

APPENDIX B ALGORITHMS FOR NUMERICAL METHODS

B.1 Numerical Integration 732

B.1.1 Algorithm for Numerical Integration 730

B.1.2 Use of Spreadsheet for Numerical Integration 730

B.2 Root of a Function 737

B.2.1 Algorithm for Finding the Root of an Equation 737

B.2.2 Use of Spreadsheet for Finding the Root of a Function 737

B.3 Determining Coefficients of a Polynomial 739

B.3.1 Algorithm for Finding Polynomial Coefficients 741

B.3.2 Use of Spreadsheet for Finding Polynomial Coefficients 741

1.2.1 1.2.1

APPENDIX C CHARTS OF STRESS/CONCENTRATION FACTORS

C.1 Finite Plate with a Central Hole 743

C.2 Stepped Axial Circular Bars with Shoulder Fillet 744

C.3 Stepped Circular Shafts with Shoulder Fillet in Tension 744

C.4 Stepped Circular Beam with Shoulder Fillet in Bending 745

APPENDIX D PROPERTIES OF SELECTED MATERIALS
