Preface xv

CHAPTER 1

Relativity 1

1.1 Special Relativity 2

All motion is relative; the speed of light in free space is the same for all observers

1.2 Time Dilation 5

A moving clock ticks more slowly than a clock at rest

1.3 Doppler Effect 11

Why the universe is believed to be expanding

1.4 Length Contraction 15

Faster means shorter

1.5 Twin Paradox 17

A longer life, but it will not seem longer

1.6 Electricity and Magnetism 19

Relativity is the bridge

1.7 Relativity of Mass 22

Rest mass is least

1.8 Mass and Energy 26

Where $E = mc^2$ comes from

1.9 Massless Particles 30

They can exist only if they move with the speed of light

1.10 General Relativity 32

Gravity is a warping of spacetime

APPENDIX: The Lorentz Transformation 36

CHAPTER 2

Particle Properties of Waves 48

2.1 Electromagnetic Waves 49

Coupled electric and magnetic oscillations that move with the speed of light and exhibit typical wave behavior

- 2.2 Blackbody Radiation 53**
Only the quantum theory of light can explain its origin
- 2.3 Photoelectric Effect 59**
The energies of electrons liberated by light depend on the frequency of the light
- 2.4 What Is Light? 63**
Both wave and particle
- 2.5 X-Rays 65**
They consist of high-energy photons
- 2.6 X-Ray Diffraction 69**
How x-ray wavelengths can be determined
- 2.7 Compton Effect 72**
Further confirmation of the photon model
- 2.8 Pair Production 76**
Energy into matter
- 2.9 Photons and Gravity 83**
Although they lack rest mass, photons behave as though they have gravitational mass

CHAPTER 3 **Wave Properties of Particles 90**

- 3.1 De Broglie Waves 91**
A moving body behaves in certain ways as though it has a wave nature
- 3.2 Waves of What? 93**
Waves of probability
- 3.3 Describing a Wave 95**
A general formula for waves
- 3.4 Phase and Group Velocities 97**
A group of waves need not have the same velocity as the waves themselves
- 3.5 Particle Diffraction 101**
An experiment that confirms the existence of de Broglie waves
- 3.6 Particle in a Box 105**
Why the energy of a trapped particle is quantized
- 3.7 Uncertainty Principle I 107**
We cannot know the future because we cannot know the present

- 3.8 **Uncertainty Principle II** 112
A particle approach gives the same result
- 3.9 **Applying the Uncertainty Principle** 113
A useful tool, not just a negative statement

CHAPTER 4

Atomic Structure 118

- 4.1 **The Nuclear Atom** 119
An atom is largely empty space
- 4.2 **Electron Orbits** 123
The planetary model of the atom and why it fails
- 4.3 **Atomic Spectra** 126
Each element has a characteristic line spectrum
- 4.4 **The Bohr Atom** 129
Electron waves in the atom
- 4.5 **Energy Levels and Spectra** 131
A photon is emitted when an electron jumps from one energy level to a lower level
- 4.6 **Correspondence Principle** 136
The greater the quantum number, the closer quantum physics approaches classical physics
- 4.7 **Nuclear Motion** 139
The nuclear mass affects the wavelengths of spectral lines
- 4.8 **Atomic Excitation** 141
How atoms absorb and emit energy
- 4.9 **The Laser** 144
How to produce light waves all in step
- APPENDIX: Rutherford Scattering** 150

CHAPTER 5

Quantum Mechanics 158

- 5.1 **Quantum Mechanics** 159
Classical mechanics is an approximation of quantum mechanics
- 5.2 **The Wave Equation** 161
It can have a variety of solutions, including complex ones

5.3	Schrödinger's Equation: Time-Dependent Form	164
	<i>A basic physical principle that cannot be derived from anything else</i>	
5.4	Expectation Values	168
	<i>How to extract information from a wave function</i>	
5.5	Schrödinger's Equation: Steady-State Form	169
	<i>Eigenvalues and eigenfunctions</i>	
5.6	Particle in a Box	171
	<i>How boundary conditions and normalization determine wave functions</i>	
5.7	Finite Potential Well	175
	<i>The wave function penetrates the walls, which lowers the energy levels</i>	
5.8	Tunnel Effect	177
	<i>A particle without the energy to pass over a potential barrier may still tunnel through it</i>	
5.9	Harmonic Oscillator	184
	<i>Its energy levels are evenly spaced</i>	
	APPENDIX: Operators, Eigenfunctions, and Eigenvalues	190
	CHAPTER 6	
	Quantum Theory of the Hydrogen Atom	199
6.1	Schrödinger's Equation for the Hydrogen Atom	200
	<i>Symmetry suggests spherical polar coordinates</i>	
6.2	Separation of Variables	202
	<i>A differential equation for each variable</i>	
6.3	Quantum Numbers	204
	<i>Three dimensions, three quantum numbers</i>	
6.4	Principal Quantum Number	206
	<i>Quantization of energy</i>	
6.5	Orbital Quantum Number	206
	<i>Quantization of angular momentum magnitude</i>	
6.6	Magnetic Quantum Number	209
	<i>Quantization of angular momentum direction</i>	
6.7	Electron Probability Density	210
	<i>No definite orbits</i>	
6.8	Radiative Transitions	214
	<i>What happens when an electron goes from one state to another</i>	

6.9 Selection Rules 218
Some transitions are more likely to occur than others

6.10 Zeeman Effect 220
What happens to an atom in a magnetic field

CHAPTER 7 **Many-Electron Atoms 227**

7.1 Electron Spin 228
Round and round it goes forever

7.2 Exclusion Principle 231
A different set of quantum numbers for each electron in an atom

7.3 Symmetric and Antisymmetric Wave Functions 232
Fermions and bosons

7.4 Periodic Table 234
Organizing the elements

7.5 Atomic Structures 237
Shells and subshells of electrons

7.6 Explaining the Periodic Table 238
How an atom's electron structure determines its chemical behavior

7.7 Spin-Orbit Coupling 246
Angular momenta linked magnetically

7.8 Total Angular Momentum 248
Both magnitude and direction are quantized

7.9 X-Ray Spectra 253
They arise from transitions to inner shells

APPENDIX: Atomic Spectra 258

CHAPTER 8 **Molecules 265**

8.1 The Molecular Bond 266
Electric forces hold atoms together to form molecules

8.2 Electron Sharing 268
The mechanism of the covalent bond

8.3 The H_2^+ Molecular Ion 269
Bonding requires a symmetric wave function

- 8.4 **The Hydrogen Molecule** 273
The spins of the electrons must be antiparallel
- 8.5 **Complex Molecules** 274
Their geometry depends on the wave functions of the outer electrons of their atoms
- 8.6 **Rotational Energy Levels** 280
Molecular rotational spectra are in the microwave region
- 8.7 **Vibrational Energy Levels** 284
A molecule may have many different modes of vibration
- 8.8 **Electronic Spectra of Molecules** 291
How fluorescence and phosphorescence occur

CHAPTER 9

Statistical Mechanics 296

- 9.1 **Statistical Distributions** 297
Three different kinds
- 9.2 **Maxwell-Boltzmann Statistics** 298
Classical particles such as gas molecules obey them
- 9.3 **Molecular Energies in an Ideal Gas** 301
They vary about an average of $\frac{3}{2}kT$
- 9.4 **Quantum Statistics** 307
Bosons and fermions have different distribution functions
- 9.5 **Rayleigh-Jeans Formula** 311
The classical approach to blackbody radiation
- 9.6 **Planck Radiation Law** 314
How a photon gas behaves
- 9.7 **Specific Heats of Solids** 319
Classical physics fails again
- 9.8 **Free Electrons in a Metal** 322
No more than one electron per quantum state
- 9.9 **Electron-Energy Distribution** 324
Why the electrons in a metal do not contribute to its specific heat except at very high and very low temperatures
- 9.10 **Dying Stars** 326
What happens when a star runs out of fuel

CHAPTER 10**The Solid State 333**

- 10.1 **Crystalline and Amorphous Solids 334**
Long-range and short-range order
- 10.2 **Ionic Crystals 336**
The attraction of opposites can produce a stable union
- 10.3 **Covalent Crystals 340**
Shared electrons lead to the strongest bonds
- 10.4 **Van der Waals Bond 341**
Weak but everywhere
- 10.5 **Metallic Bond 344**
A gas of free electrons is responsible for the characteristic properties of a metal
- 10.6 **Band Theory of Solids 351**
The energy band structure of a solid determines whether it is a conductor, an insulator, or a semiconductor
- 10.7 **Semiconductor Devices 357**
The properties of the p-n junction are responsible for the microelectronics industry
- 10.8 **Energy Bands: Alternative Analysis 366**
How the periodicity of a crystal lattice leads to allowed and forbidden bands
- 10.9 **Superconductivity 373**
No resistance at all, but only at very low temperatures (so far)
- 10.10 **Bound Electron Pairs 378**
The key to superconductivity

CHAPTER 11**Nuclear Structure 384**

- 11.1 **Nuclear Composition 385**
Atomic nuclei of the same element have the same numbers of protons but can have different numbers of neutrons
- 11.2 **Some Nuclear Properties 389**
Small in size, a nucleus may have angular momentum and a magnetic moment

- 11.3 Stable Nuclei 394**
Why some combinations of neutrons and protons are more stable than others
- 11.4 Binding Energy 397**
The missing energy that keeps a nucleus together
- 11.5 Liquid-Drop Model 400**
A simple explanation for the binding-energy curve
- 11.6 Shell Model 405**
Magic numbers in the nucleus
- 11.7 Meson Theory of Nuclear Forces 409**
Particle exchange can produce either attraction or repulsion

CHAPTER 12

Nuclear Transformations 415

- 12.1 Radioactive Decay 416**
Five kinds
- 12.2 Half-Life 422**
Less and less, but always some left
- 12.3 Radioactive Series 428**
Four decay sequences that each end in a stable daughter
- 12.4 Alpha Decay 431**
Impossible in classical physics, it nevertheless occurs
- 12.5 Beta Decay 435**
Why the neutrino should exist and how it was discovered
- 12.6 Gamma Decay 440**
Like an excited atom, an excited nucleus can emit a photon
- 12.7 Cross Section 441**
A measure of the likelihood of a particular interaction
- 12.8 Nuclear Reactions 447**
In many cases, a compound nucleus is formed first
- 12.9 Nuclear Fission 451**
Divide and conquer
- 12.10 Nuclear Reactors 454**
 $E = mc^2 + $$$$
- 12.11 Nuclear Fusion in Stars 459**
How the sun and stars get their energy

- 12.12 Fusion Reactors 462
The energy source of the future?
- APPENDIX: Theory of Alpha Decay 467

CHAPTER 13

Elementary Particles 474

- 13.1 Interactions of Charged Particles 475
They lose energy mainly to atomic electrons in their paths
- 13.2 Leptons 478
Three pairs of truly elementary particles
- 13.3 Hadrons 481
Particles subject to the strong interaction
- 13.4 Elementary Particle Quantum Numbers 485
Finding order in apparent chaos
- 13.5 Quarks 489
The ultimate constituents of hadrons
- 13.6 Fundamental Interactions 496
Their number grows smaller and smaller
- 13.7 History of the Universe 499
It began with a bang
- 13.8 The Future 502
“In my beginning is my end.” (T. S. Eliot, Four Quartets)

APPENDIX

Atomic Masses 507

Answers to Odd-Numbered Exercises 516

Index 523
