

1.1	Problem Formulation	3.3	195
1.2	Capacity of a Photon Channel	3.4	196
1.3	An Informational Theoretic Approach	3.5	198
1.4	Narrow-Band Photon Channel	3.6	200
1.5	Optimum Signal Recovery	4.1	212
1.6	References	3.4	215

Contents

2.1	Theory of Optics	2.1	217
2.2	Aspects of Coherence	2.2	217
2.3	Spatial and Temporal Coherence	2.3	221
2.4	Coherent and Incoherent Processing	2.4	224

<i>From the Series Editor</i>	Brian J. Thompson	iii
<i>Preface</i>		v

1. Introduction to Information Transmission		1
1.1 Information Measure		4
1.2 Entropy Information		7
1.3 Communication Channels		15
1.4 Memoryless Discrete Channels		16
1.5 Continuous Channels with Additive Noise		22
1.6 Summary and Remarks		31
References		33
2. Diffraction and Signal Analysis		35
2.1 Introduction to Diffraction		36
2.2 Fresnel–Kirchhoff Theory		39
2.3 Linear Systems and Fourier Analysis		41
2.4 Finite Bandwidth Analysis		44
2.5 Degrees of Freedom of a Signal		49
2.6 Gabor's Information Cell		52
2.7 Signal Detection		55
2.8 Statistical Signal Detection		57
2.9 Signal Recovering		61
2.10 Signal Ambiguity		63
2.11 Wigner Signal Representation		66
2.12 Fourier Transform Properties of Lenses		70
References		73
3. Optical Spatial Channel and Encoding Principles		75
3.1 Optical Spatial Communication Channel		75
3.2 Optical Message in Spatial Coding		80

3.3	Optical Channel with Resolution Cells of Different Sizes	84
3.4	Matching a Code with a Spatial Channel	89
	References	93
4.	Entropy and Information	<i>Frontiers</i> 3
4.1	Fundamental Laws of Thermodynamics	95
4.2	Physical Entropy and Information	99
4.3	Trading Entropy with Information	100
4.4	Typical Examples	102
4.5	Remarks	106
	References	107
5.	Demon Exorcist and Cost of Entropy	<i>Frontiers</i> 3
5.1	Perpetual Motion Machine	109
5.2	Maxwell's Demon	111
5.3	Information and Demon Exorcist	113
5.4	Demon Exorcist, A Revisit	118
5.5	Szilard's Demon	121
5.6	Diffraction-Limited Demon	124
5.7	Minimum Cost of Entropy	126
5.8	Gabor's Perpetuum Mobile of the Second Kind	129
	References	131
6.	Observation and Information	<i>Frontiers</i> 3
6.1	Observation with Radiation	135
6.2	Simultaneous Observations	139
6.3	Observation and Information	142
6.4	Accuracy and Reliability in Observations	145
6.5	Observation by Interference and by Microscope	153
6.6	Uncertainty and Observation	159
6.7	Remarks	162
	References	163
7.	Image Restoration and Information	<i>Frontiers</i> 3
7.1	Image Restoration	165
7.2	Uncertainty and Image Restoration	171
7.3	Resolving Power and Information	175
7.4	Coherent and Digital Image Enhancement	178
7.5	Information Leakage through a Passive Channel	180
7.6	Restoration of Blurred Images	186
	References	192

8.	Quantum Effect on Information Transmission	195
8.1	Problem Formulation and Entropy Consideration	196
8.2	Capacity of a Photon Channel	198
8.3	An Informational Theoretic Approach	203
8.4	Narrow-Band Photon Channel	206
8.5	Optimum Signal Power Distribution, A Special Case	212
	References	215
9.	Coherence Theory of Optics	217
9.1	Aspects of Coherence	217
9.2	Spatial and Temporal Coherence	221
9.3	Coherent and Incoherent Processing	224
9.4	Exploitation of Coherence	226
9.5	Remarks	232
	References	232
10.	Wavelet Transforms with Optics	233
10.1	Aspects of Wavelet Transform	233
10.2	Fourier Domain Processing	234
10.3	Wavelet Transform	239
10.4	Optical Implementations	242
10.5	Simulations	246
10.6	Remarks	249
	References	249
11.	Pattern Recognition with Optics	251
11.1	Optical Correlators	251
11.2	Optical-Disk-Based Correlator	255
11.3	Photorefractive-Based Correlator	257
11.4	Optical Neural Networks	259
11.5	Composite Filters	263
11.6	Remarks	269
	References	269
12.	Computing with Optics	271
12.1	Logic-Based Computing	271
12.2	Optical-Interconnects and Shuffling	275
12.3	Matrix-Vector Multiplication	278
12.4	Systolic Processor	279
12.5	Matrix-Matrix Processing	282
12.6	Expert System and Artificial Intelligence	284
12.7	Remarks	292
	References	293

13.	Communication with Fiber Optics	295
13.1	Aspects of Fiber-Optic Communication	295
13.2	Optical Fiber Structures	301
13.3	Fiber-Optic Transmission	303
13.4	Types of Optical Fibers	309
13.5	Fiber-Optic Communications	312
13.6	Remarks	315
	References	317
<i>Appendix A Linear Difference Equation with Constant Coefficients</i>		319
<i>Appendix B Solution of the a priori Probabilities of Eqs. (5.37) and (5.38)</i>		321
<i>Appendix C Probability Energy Distribution</i>		323
<i>Index</i>		325
1.1	Perpetual Motion Machines	
1.2	Maxwell's Demon	
1.3	Information and Demon	
1.4	Demon Exorcism, A New Type of Wavelet Transform	101
1.5	Szilard's Demon	101
1.6	Diffraction-Limited Demon	101
1.7	Minimum Cost of Entropy	101
1.8	Gabor's Perpetuum Mobile of the Second Kind	101
1.9	References	101
2.1	Observation and Information	133
2.2	Observation with Radiation	133
2.3	Simultaneous Observation	139
2.4	Observation and Information	142
2.5	Accuracy and Resolution	145
2.6	Observation by Interference	153
2.7	Uncertainty and Observation	159
2.8	Remarks	162
2.9	References	163
3.1	Combining with Objects	151
3.2	Image Restoration and Information	165
3.3	Image Restoration and Spurious Objects	165
3.4	Uncertainty and Image Reconstruction	171
3.5	Reaching Power and Information	175
3.6	Analog and Digital Images	178
3.7	Restoration of Blurred Images	186
3.8	Remarks	192
