

CONTENTS

Preface.....	xi
History of Optical Comb Development	1
Introduction	12
1. Time- and Frequency-Domain Pictures of a Mode-Locked Laser.....	14
1.1 Introduction to mode-locked lasers	14
1.2 Frequency spectrum of a mode-locked laser	15
1.3 Determining absolute optical frequencies with octave-spanning spectra	17
1.4 Femtosecond optical-frequency comb generator.....	19
1.5 Time- and frequency-domain characterizations of f_0	22
2. Precision Optical Frequency Metrology Using Femtosecond-Optical-Frequency Combs	24
2.1 Measurement of absolute optical frequency.....	24
2.2 Optical atomic clocks	27
2.3 Optical frequency synthesizer	29
3. Atomic and Molecular Spectroscopy	30
3.1 Precise, simultaneous determination of global atomic structure and transition dynamics.....	30
3.2 I_2 hyperfine interactions, optical frequency standards, and clocks.....	33
4. Carrier-Envelope Phase Coherence and Time-Domain Applications	38
4.1 Timing synchronization of mode-locked lasers	39
4.2 Phase lock between separate mode-locked lasers	40
4.3 Extending phase-coherent femtosecond combs to the mid-IR spectral region.....	41
4.4 Femtosecond lasers and external optical cavities.....	42

4.5	Coherent control via quantum interference between one- and two-photon absorption	46
4.6	Extreme nonlinear optics	48
5.	Summary	48
Femtosecond Laser Development		54
1.	Introduction	54
2.	Pulse Dynamics	57
3.	Octave-Spanning Lasers.....	63
3.1	Octave-spanning laser using prisms	64
3.1.1	Design.....	65
3.1.2	Carrier-envelope phase stabilization.....	66
3.1.3	Frequency-dependent spatial mode	67
3.2	Prismless octave-spanning laser	70
3.2.1	Design.....	70
3.2.2	Carrier-envelope phase stabilization.....	72
4.	Carrier-Envelope Phase Dynamics.....	74
5.	Summary	75
Gigahertz Femtosecond Lasers		78
1:	Introduction	78
2.	High-repetition-Rate Ring Oscillators	80
2.1	Design criteria and basic resonator layout.....	80
2.2	Standard Ti:sapphire lasers for 0.3–3.5 ghz repetition rate	83
2.3	Cr:forsterite oscillator at 433 mhz — extension to telecommunication wavelengths	86
3.	Broadband Ti:sapphire Oscillator	88
3.1	How does it work?.....	89
3.2	Application in frequency metrology and optical clocks.....	91
4.	Conclusion	93
Microstructure Fiber and White-Light Generation.....		97
1.	Introduction	97
2.	Microstructure Fiber Fabrication	98
2.1	Preform fabrication.....	98
2.2	Fiber draw	100
3.	Microstructure Fiber Types.....	100
4.	Linear Optical Properties of Microstructure Fiber	102
5.	Supercontinuum Generation.....	104
5.1	Nonlinear envelope equation.....	104
5.2	Spectral superbroadening	105

5.3	Continuum instability and noise	107
6.	Conclusions	109
Optical Comb Dynamics and Stabilization		112
1.	Introduction	112
2.	Comb Parameters and Their Connection to Intracavity Dispersion	113
2.1	Carrier-envelope-offset phase and frequency in the time domain	113
2.2	The frequency comb and its dynamics	115
3.	Measurement of the CEO Frequency	117
3.1	Heterodyning different laser harmonics	117
3.2	Transfer oscillators and interval bisection.....	119
4.	CEO Phase Noise	120
4.1	Noise densities and rms phase jitter	121
4.2	CEO-phase noise of mode-locked oscillators.....	121
4.3	Physical mechanisms behind CEO fluctuations	123
4.4	Amplitude-to-phase conversion effects.....	124
5.	Stabilization of the CEO Frequency.....	126
5.1	Controlling the CEO frequency of a laser oscillator	126
5.2	Performance of CEO phase locks.....	127
5.3	Limitations of CEO control.....	129
6.	Summary	130
Femtosecond Noncollinear Parametric Amplification and Carrier-Envelope Phase Control		133
1.	Introduction	133
2.	Advances of Noncollinear-Phase-Matched Optical Parametric Conversion	135
3.	Principle of Parametric Amplification	138
3.1	Noncollinear-optical-parametric amplification (NOPA).....	140
4.	Signal-Wavelength-Insensitive Phase Matching.....	144
5.	Group-Velocity Matching in β -BaB ₂ O ₄	146
6.	Femtosecond NOPA Based on β -BaB ₂ O ₄	150
6.1	Broadband amplification of a single-filament continuum.....	150
6.2	Output properties	152
7.	Limitation of Pulse Width because of Pulse-Front Mismatch	155
7.1	Tilted pump geometry for pulse front matching.....	157
8.	Chirp Property of Signal	159
8.1	Compression to the sub-5 fs regime	160
9.	Second-Generation Noncollinear Parametric Amplifier	166

10. Conclusions and Outlook	170
Optical Frequency Measurement	176
1. Frequency Combs.....	176
2. The Cesium D ₁ Line and the Fine Structure Constant	179
3. Optical Synthesizers.....	181
4. Octave-Wide Frequency Combs	183
5. Application to Hydrogen.....	184
6. The First Optical Synthesizer.....	185
7. The Hydrogen Spectrometer	187
8. The 1S–2S Transition Frequency	190
9. Checking for Slow Drifts of a Natural Constant	192
Optical Frequency Measurement Using Frequency	
Multiplication and Frequency Combs.....	198
1. Introduction.....	198
2. Frequency Measurements by Repeated Harmonic Mixing	
(Frequency Chains)	200
3. Frequency Interval Division Approach.....	202
4. Optical Frequency Measurement Using Femtosecond Lasers	204
5. Optical Frequency Measurements	209
5.1 Ca frequency measurement	210
5.2 Yb ⁺ frequency measurement	212
6. Test on the Precision of Frequency Measurement with	
Frequency Combs.....	213
6.1 Transfer technique.....	213
6.2 Frequency ratio.....	216
7. Summary	220
Femtosecond Lasers for Optical Clocks and Low Noise	
Frequency Synthesis.....	225
1. Introduction.....	225
1.1 Basic components of optical clocks	227
1.2 Uses of optical atomic clocks	229
1.3 A brief history of the development of optical clocks	230
2. The Atomic Reference	231
2.1 Single ion references	233
2.2 Neutral atom references.....	234
2.3 Molecular references	236
2.4 Local oscillator requirements	238
3. Femtosecond Laser-Based Optical Frequency Synthesizers.....	238

3.1	Considerations in designing a femtosecond comb for use in an optical clock	240
3.2	Frequency synthesis with a femtosecond laser.....	243
3.2.1	methods of control	244
3.3	Testing the synthesizer	249
3.4	Alternatives to Ti:sapphire	251
4.	Signal Transmission and Cross-Linking	253
Generation And Measurement of Intense Phase-Controlled Few-Cycle Laser Pulses		263
1.	Introduction	264
2.	Carrier-Envelope Phase of a Mode-Locked Pulse Train and a Single Attosecond Pulse	268
3.	Measurement of Phase Variations	270
3.1	Detecting carrier-envelope drift of oscillator pulses	270
3.2	Detecting carrier-envelope drift of amplified pulses.....	271
3.3	Measuring the phase difference by linear interferometry....	273
4.	Phase Jitter of the White-Light Continuum.....	276
4.1	Phase lock between the input pulse and the white-light continuum.....	276
4.2	Phase noise resulting from intensity fluctuations	278
5.	Concepts of Phase-Controlled Amplification	280
6.	Phase-Stabilized 5 fs, 0.1 TW-Amplified System.....	284
7.	Control of Light Field Oscillations	288
8.	Carrier-Envelope-Phase Measurement without Ambiguity	296
9.	Gouy Phase Shift for Few-Cycle Laser Pulses.....	302
10.	Conclusions and Outlook	307
Quantum Control of High-Order Harmonic Generation		314
1.	The Physics of High-Order-Harmonic Generation	315
2.	“Single-Atom” Effects in High-Order-Harmonic Generation: Manipulation and Coherent Control.....	317
3.	Phase Matching of High-Harmonic Generation.....	319
4.	Quasi-Phase Matching of High-Harmonic Generation	323
5.	Conclusion	329
Applications of Ultrafast Lasers		333
1.	Mode Locking	334
2.	Group and Phase Velocities in Ring Lasers	337
3.	Ring Lasers as Sensors.....	338
3.1	Case (1): nonreciprocal effects.....	340

In Chapter 1 we provide an introductory description of mode-locked lasers, the connection between time and frequency descriptions of their

3.2	Case (2): reciprocal effects that can be synchronized to the cavity repetition rate	341
3.3	Case (3): reciprocal effects, slow motions	342
4.	Intracavity-Pumped Optical Parametric Oscillator as a Mode-Locked Ring Laser	343
5.	Stabilization of the Frequency Comb	345
5.1	Locking femtosecond pulses to stable reference cavities	346
5.2	Characterization of femtosecond comb stability	348
6.	Dispersion Measurement Applications	349
6.1	Cavity characterization	349
6.2	Atmospheric dispersion	351
7.	Ring Laser Stabilization	352
	Author addresses	355
