Foreword	xiii
Preface	xv
1 Introduction	1
2 Theory of Optical Communications	11
2.1 Review of Classical Information Theory	12
2.1.1 Information and Entropy for Discrete Messages	12
2.1.2 Information and Entropy for Continuous Messages	14
2.1.3 The Discrete Channel Model and the Capacity Theorem	15
2.1.4 The Continuous Channel	17
2.2 The Optical Channel Capacity: A Classical Approach	19
2.3 The Optical Channel Capacity: A Quantum Approach	22
2.3.1 The Capacity of the Quantum Optical Channel	22
2.3.2 Quantum Limit and Bandwidth Expansion	25
2.4 Efficiency of Binary Intensity Modulation with an Ideal Photon Counter	28
2.5 Efficiency of Coherent Optical Systems	31
2.5.1 Semiclassical Analysis of the Heterodyne Receiver	31
2.5.2 Quantum Analysis of the Heterodyne Receiver	34
2.5.3 Semiclassical Analysis of the Homodyne Receiver	36
2.6 Efficiency of a Coherent Amplifier Followed by a Photon Counter	38
References	40

3	Fiber Devices for Optical Communication Systems	42
3.1	Single-Mode Silica Fibers	43
3.1.1	Single-Mode Fiber Attenuation	46
3.1.2	Single-Mode Fiber Chromatic Dispersion	48
3.1.3	Optical Field Polarization Evolution	52
3.1.4	Polarization-Maintaining Fibers	58
3.1.5	Nonlinear Optical Fiber Propagation	59
3.2	Erbium-Doped Fibers Amplifiers	67
3.2.1	Structure of an Erbium-Doped Fiber Amplifier	71
3.2.2	Erbium-Doped Fiber Amplifier Gain and Noise Performance	73
3.3	Polarization Controllers	80
3.3.1	Polarization Control Element	81
3.3.2	Control Algorithm	83
	References	83
4	Integrated Devices for Optical Communication Systems	91
4.1	Semiconductor Laser	93
4.1.1	Semiconductor Laser Principle	93
4.1.2	Laser Structure for Single-Mode Operation	103
4.1.3	Noise Characteristics Under Continuous-Wave Operation	110
4.1.4	Modulation and Pulse Operation Characteristics	117
4.1.5	External-Cavity Laser	123
4.1.6	Advanced Structures	128
4.2	Semiconductor Optical Amplifiers	138
4.3	Optoelectronic Modulators	148
4.3.1	Electro-Optic Devices	149
4.3.2	Acousto-Optic Devices	162
4.4	Photodetectors for Optical Communications	168
4.4.1	The Semiconductor Photodiode	169
4.4.2	Efficiency of Semiconductor Photodetectors	170
4.4.3	Photodiode Response Time	172
4.4.4	Noise in Optical Detectors	174
4.4.5	PIN Photodiode	176
4.4.6	Avalanche Photodiode	177
4.4.7	Photodiode Materials	180
4.4.8	Advanced Structures	181
	References	182

5	Direct Detection Optical Communication Systems	193
5.1	IM-DD Systems Structure	194
5.2	IM-DD Systems Performance	199
5.2.1	Shot Noise and Multiplication Noise	200
5.2.2	Dark-Current Noise	202
5.2.3	Thermal-Circuit Noise	203
5.2.4	Performance Evaluation of Operative Systems	204
5.2.5	Imperfect Modulation and Intersymbol Interference	207
5.2.6	Receiver Dynamic Range	210
5.3	IM-DD Systems Employing Optical Amplifiers	211
5.3.1	System Structure and Design	212
5.3.2	Performance of IM-DD Systems in the Presence of Optical Amplifiers: Ideal Propagation	215
5.3.3	Performance of IM-DD Receivers in the Presence of Optical Amplifiers: Nonlinear Propagation	221
5.4	Direct Detection PPM Systems	228
5.4.1	Error Probability for Direct Detection PPM Receiver	229
5.4.2	Design of an Optimum Direct Detection PPM Receiver	233
5.4.3	Performance of Direct Detection PPM System	235
	References	239
6	Coherent Systems: Structure and Ideal Performance	242
6.1	Coherent Optical Systems Structure	244
6.1.1	Single-Branch Receiver	245
6.1.2	Balanced Receiver	247
6.1.3	Polarization Diversity Receiver	248
6.1.4	Phase Diversity Receiver	250
6.2	Coherent Systems Using PSK Modulation	245
6.2.1	Single-Branch PSK Homodyne Receiver	256
6.2.2	Single-Branch PSK Heterodyne Receiver	259
6.2.3	PSK Receiver Using a Reference Carrier	260
6.3	Coherent Systems Using DPSK Modulation	265
6.3.1	Single-Branch DPSK Heterodyne Receiver	270
6.3.2	Polarization-Diversity DPSK Heterodyne Receiver	270
6.3.3	Phase-Diversity DPSK Homodyne Receiver	271
6.4	Coherent Systems Using ASK Modulation	272
6.4.1	Single-Branch ASK Heterodyne Receiver	276
6.4.2	Polarization-Diversity ASK Heterodyne Receiver	278
6.4.3	Phase-Diversity ASK Homodyne Receiver	278
6.5	Coherent Systems Using FSK Modulation	279
6.5.1	Wide-Deviation FSK Heterodyne Receiver	284

6.5.2	Narrow-Deviation FSK Heterodyne Receiver	288
6.6	Coherent Systems Using Polarization Modulation	292
6.6.1	Heterodyne Receiver with Optical Polarization Control	294
6.6.2	Heterodyne Receiver with Electronic Polarization Control	295
6.6.3	Heterodyne Receiver Based on Differential Stokes Parameters Detection	298
6.6.4	Homodyne Receivers	300
6.7	Systems Using Polarization Scrambling	303
6.8	Performance Comparison Among Different Systems	307
	References	309
7	Performance Degradation Sources in Coherent Optical Systems	314
7.1	Coherent Receiver Structure and Related Noise Effects	316
7.1.1	Single-Branch Homodyne Receiver	317
7.1.2	Single-Branch Heterodyne Receiver	318
7.2	Performance Degradation Induced by Laser Phase Noise	320
7.2.1	Homodyne PSK Receiver	322
7.2.2	Heterodyne PSK Receiver	330
7.2.3	Heterodyne DPSK Single-Branch Receiver	332
7.2.4	Heterodyne ASK Single-Branch Receiver	336
7.2.5	Heterodyne FSK Single-Branch Receiver	343
7.2.6	Polarization-Modulated Systems	346
7.2.7	Phase Noise Sensitivity Comparison Among Coherent Systems	346
7.3	Performance Degradation Induced by Laser Intensity Noise	347
7.4	Performance Degradation Induced by Fiber Dispersion	352
7.5	Performance Degradation Induced by Nonlinear Effects in Fiber Propagation	356
7.5.1	Effect of Stimulated Brillouin Scattering	357
7.5.2	Effect of Kerr Nonlinearity in Conjunction with Fiber Dispersion	360
7.6	Performance Degradation Induced by ASE Noise of Optical Amplifiers	365
7.6.1	Coherent System Using Optical Amplifiers with Ideal Fiber Propagation	368
7.6.2	Coherent System Using Optical Amplifiers with Nonlinear Fiber Propagation	370
	References	374

8	Multilevel Coherent Optical Systems	380
8.1	Instantaneous Multilevel Modulation	381
8.2	Quadrature Multilevel Modulations	385
8.2.1	N-PSK Modulation	386
8.2.2	N-QAM Modulation	391
8.2.3	N-4QSK Modulation	395
8.2.4	N-4Q-QAM Modulation	402
8.2.5	Phase Noise Influence on Quadrature Modulation Formats	405
8.3	Polarization-Modulated Multilevel Systems	407
8.3.1	Constant Power Modulation	409
8.3.2	Variable Power Modulation	413
8.3.3	Phase Noise Influence on Multilevel Polarization-Modulated Systems	415
8.4	Power-Efficient Multilevel Modulation Formats	417
8.4.1	Multilevel Wide Deviation Frequency Shift Keying	417
8.4.2	Combined WD-FSK and N-4QSK Modulation	421
8.4.3	Phase Noise Influence on Multifrequency Modulation Formats	423
8.5	Comparison Among Instantaneous Multilevel Modulation Formats	424
	References	426
9	Multichannel Optical Systems	429
9.1	WDM Optical Transmission Systems	430
9.1.1	Multiplexers and Demultiplexers for WDM Systems	431
9.1.2	Frequencies Stabilization in Densely Spaced WDM Systems	433
9.1.3	Crosstalk in Densely Spaced WDM Systems	435
9.2	FDM Optical Transmission Systems	440
9.2.1	Channel Interference in FDM Systems	443
9.2.2	Impact of Nonlinear Effects in Fiber Propagation on Densely Spaced WDM and FDM Systems	450
9.3	SCM Optical Transmission Systems	452
9.3.1	Intensity Modulation–Direct Detection SCM Systems	453
9.3.2	Optical Coherent SCM Systems	457
10	Present-Day Systems Implementations	469
10.1	Single Channel Systems	470
10.1.1	IM–DD Systems	471
10.1.2	Coherent Systems	473

10.2	Long-Distance Systems Using Optical Amplifiers	482
10.2.1	IM-DD Systems	482
10.2.2	Coherent Systems	484
10.2.3	Soliton Systems	484
10.3	Multilevel Systems	488
10.3.1	IM-DD Multilevel Systems	490
10.3.2	Coherent Multilevel Systems	490
10.4	Frequency-Multiplexed Systems	493
10.4.1	Point-to-Point Frequency-Multiplexing Experiments	493
10.4.2	An Example of Optical Passive Star Network Adopting FDM Technique	495
10.4.3	An Example of Optical Passive Star Network Using Direct-Detection Single-Filter FSK and WDM Technique	500
10.4.4	An Example of a Coherent Optical CATV Network Based on FDM Technique	502
10.4.5	An Example of Coherent Optical CATV Network Based on SCM Technique and Coherent Optical Detection	504
10.5	Field Trials	505
Appendix A: The Marcum Q Function		516
Appendix B: Distribution of Hermitian Quadratic Forms of Gaussian Random Variables		520
Appendix C: The Cauchy Equation and Its Approximations		523
Appendix D: Principal States of Polarization in a Single-Mode Fiber		530
Index		535
