

DESCRIBING MOTION

Introduction	5
Chapter 1 Motion along a line	7
1 From drop-towers to <i>Oblivion</i> — some applications of linear motion	7
2 Positions along a line	8
2.1 Simplification and modelling	8
2.2 Describing positions along a line	9
2.3 Position–time graphs	11
2.4 Displacement–time graphs	12
2.5 A note on graph drawing	13
3 Uniform motion along a line	14
3.1 Describing uniform motion	14
3.2 Constant velocity and the gradient of the position–time graph	15
3.3 Initial position and the intercept of the position–time graph	17
3.4 The equations of uniform motion	18
3.5 Velocity–time and speed–time graphs	20
3.6 The signed area under a constant velocity–time graph	21
3.7 A note on straight-line graphs and their gradients	22
4 Non-uniform motion along a line	23
4.1 Instantaneous velocity	23
4.2 Instantaneous acceleration	26
4.3 A note on functions and derivatives	28
4.4 Velocity and acceleration as derivatives	32
4.5 The signed area under a general velocity–time graph	34
5 Uniformly accelerated motion along a line	36
5.1 Describing uniformly accelerated motion	36
5.2 The equations of uniformly accelerated motion	37
5.3 The acceleration due to gravity	39
5.4 Drop-towers revisited	39
6 Closing items	41
Chapter 2 Motion in a plane and in space	45
1 Long jumping — an example of motion in a plane	45
2 Position and displacement in a plane	46
2.1 From one dimension to two	46
2.2 Position and position vectors	47
2.3 Displacement and displacement vectors	52
2.4 A note on vectors and scalars	56
3 Velocity and acceleration in a plane	57
3.1 Velocity in a plane	57
3.2 Acceleration in a plane	60
4 Projectile motion	62
4.1 Introducing projectile motion	62
4.2 The equations of projectile motion	64
4.3 The time of flight of a projectile	66
4.4 The range of a projectile	67

4.5	The trajectory of a projectile	68
4.6	A note on quadratic equations	70
4.7	Launching bodies from a height	73
5	Motion in space	78
5.1	From two dimensions to three	78
5.2	Vectors in space	79
5.3	Some examples of motion in space	82
6	Closing items	85
Chapter 3 Periodic motion		90
1	Earth satellites – an example of periodic motion	90
2	Circular motion	92
2.1	Some examples of circular motion	92
2.2	Positions on a circle	92
2.3	Angular velocity and angular speed	98
2.4	Centripetal acceleration	101
2.5	Circular Earth orbits	103
3	Simple harmonic motion	105
3.1	Some examples of simple harmonic motion	105
3.2	Velocity and acceleration in simple harmonic motion	109
3.3	The simple harmonic motion equation	112
3.4	The importance of simple harmonic motion	113
4	Orbital motion	115
4.1	A note on the ellipse	115
4.2	Kepler's laws	117
4.3	Position, velocity and acceleration in orbital motion	120
4.4	Transfer orbits and interplanetary flights	121
5	Closing items	123
Chapter 4 Consolidation and skills development		126
1	Introduction	126
2	Overview of Chapters 1 to 3	126
3	Introducing <i>Physica</i>	129
3.1	Advice about <i>Physica</i>	129
3.2	Features of <i>Physica</i>	132
3.3	Getting started on <i>Physica</i>	133
4	Review of skills	134
4.1	Mathematical skills	134
4.2	IT skills	135
5	Basic skills and knowledge test	135
6	Interactive questions	138
7	<i>Physica</i> problems	138
