Introduction

1 The Physics of Fluids

1.1	The liquid state	1
1.1.1	The different states of matter: model systems and real media	2
1.1.2	The solid-liquid transition: a sometimes nebulous boundary	5
1.2	Macroscopic transport coefficients	5
1.2.1	Thermal conductivity	6
1.2.2	Mass diffusion	11
1.3	Microscopic models for transport phenomena	13
1.3.1	The random walk	13
1.3.2	Transport coefficients for ideal gases	15
1.3.3	Diffusive transport phenomena in liquids	19
1.4	Surface effects and surface tension	21
1.4.1	Surface tension	21
1.4.2	Pressure differences associated with surface tension	23
1.4.3	Spreading of drops on a surface – the idea of wetting	25
1.4.4	Influence of gravity	27
1.4.5	Some methods for measuring the surface tension	29
1.4.6	The Rayleigh–Taylor instability	31
1.5	Scattering of electromagnetic waves and particles in fluids	33
1.5.1	Some probes of the structure of liquids	33
1.5.2	Elastic and inelastic scattering	34
1.5.3	Elastic and quasi elastic scattering of light: a tool for studying the structure and diffusive transport in liquids	37
1.5.4	Inelastic scattering of light in liquids	40
1A	Appendix - Transport coefficients in fluids	42

2 Momentum Transport Under Various Flow Conditions

2.1	Diffusive and convective transport of momentum in flowing fluids	43
2.1.1	Diffusion and convection of momentum: two illustrative experiments	43
2.1.2	Momentum transport in a shear flow – introduction of the viscosity	45
2.2	Microscopic models of the viscosity	48
2.2.1	Viscosity of gases	48
2.2.2	Viscosity of liquids	49
2.2.3	Numerical simulation of molecular trajectories in a flow	51
2.3	Comparison between diffusion and convection mechanisms	52
2.3.1	The Reynolds number	52
2.3.2	Convective and diffusive mass, or thermal energy, transport	53
2.4	Description of various flow regimes	55
2.4.1	Flows in a cylindrical tube: Reynolds' experiment	56
2.4.2	Various flow regimes in the wake of a cylinder	57
2.4.3	Flow behind a sphere	58

3 Kinematics of Fluids	60
3.1 Description of the motion of a fluid	60
3.1.1 Characteristic linear scales and the hypothesis of continuity	60
3.1.2 Eulerian and Lagrangian descriptions of fluid motion	61
3.1.3 Acceleration of a particle of fluid	61
3.1.4 Streamlines and stream-tubes, trajectories and streaklines	63
3.2 Deformations in flows	64
3.2.1 Local components of the velocity gradient field	64
3.2.2 Analysis of the symmetric component of the rate of strain tensor: pure strain	65
3.2.3 Antisymmetric component of the tensor of the rate of deformation: pure rotation	68
3.2.4 Application	70
3.2.5 Case of large deformations	71
3.3 Conservation of mass in a moving fluid	72
3.3.1 Equation for the conservation of mass	73
3.3.2 Condition for an incompressible fluid	73
3.3.3 Rotational flows; potential flows	75
3.4 The stream function	75
3.4.1 Introduction and significance of the stream function	75
3.4.2 Stream functions for two-dimensional flows	77
3.4.3 Stream functions for axially symmetric flows	79
3.5 Visualization and measurement of the velocity and of the velocity gradients in flows	80
3.5.1 Visualization of flows	81
3.5.2 Concentration measurements	83
3.5.3 A few methods for measuring the local velocity in a fluid	83
3.5.4 Measurements of the velocity field and of velocity-gradients in a flowing fluid	86
4 Dynamics of viscous fluids: rheology and parallel flows	90
4.1 Surface forces	90
4.1.1 General expression for the surface forces: stresses in a fluid	90
4.1.2 Characteristics of the viscous shear stress tensor	92
4.1.3 The viscous shear-stress tensor for a Newtonian fluid	93
4.2 Equation of motion for a fluid	95
4.2.1 General equation for the dynamics of a fluid	95
4.2.2 Navier–Stokes equation of motion for a Newtonian fluid	97
4.2.3 Euler’s equation of motion for an ideal fluid	97
4.2.4 Dimensionless form of the Navier–Stokes equation	98
4.3 Boundary conditions for fluid flow	98
4.3.1 Boundary condition at a solid wall	98
4.3.2 Boundary conditions at the interface between two fluids: surface tension effects	99
4.4 Non-Newtonian fluids	101
4.4.1 Measurement of rheological characteristics	101
4.4.2 Time-independent non-Newtonian fluids	102
4.4.3 Non-Newtonian time-dependent fluids	106
4.4.4 Complex viscosity and elasticity of viscoelastic fluids	108
4.4.5 Anisotropic normal stresses	111
4.4.6 Elongational viscosity	113
4.4.7 Summary of the principal kinds of non-Newtonian fluids	114
4.5 One-dimensional flow of viscous Newtonian fluids	115
4.5.1 Navier–Stokes equation for one-dimensional flow	115

4.5.2	Couette flow between parallel planes	116
4.5.3	Poiseuille-type flows	117
4.5.4	Oscillating flows in a viscous fluid	120
4.5.5	Parallel flow resulting from a horizontal density variation	124
4.5.6	Cylindrical Couette flow	125
4.6	Simple one-dimensional, steady state flows of non-Newtonian fluids	127
4.6.1	Steady-state Couette plane flow	128
4.6.2	One-dimensional flow between fixed walls	128
4.6.3	Velocity profiles for simple rheological behavior	130
4.6.4	Flow of a viscoelastic fluid near an oscillating plane	132
4A	Appendix - Representation of the equations of fluid mechanics in different systems of coordinates	134
4A.1	Representation of the stress-tensor, the equation of conservation of mass and the Navier–Stokes equations in Cartesian coordinates (x, y, z)	134
4A.2	Representation of the stress-tensor, the equation of conservation of mass, and the Navier–Stokes equations in cylindrical coordinates (r, φ, z)	134
4A.3	Representation of the stress-tensor, the equation of conservation of mass, and the Navier–Stokes equations in spherical polar coordinates (r, θ, φ)	135
	Exercises	136
5	Conservation Laws	138
5.1	Equation of conservation of mass	138
5.2	Conservation of momentum	139
5.2.1	The local equation	139
5.2.2	The integral expression of the law of conservation of momentum	139
5.3	The conservation of kinetic energy; Bernoulli's Equation	142
5.3.1	The conservation of energy for a flowing incompressible fluid with or without viscosity	143
5.3.2	Bernoulli's equation and its applications	146
5.3.3	Applications of Bernoulli's equation	147
5.4	Applications of the laws of conservation of energy and momentum	152
5.4.1	Jet incident onto a plane	152
5.4.2	Exit jet from an opening in a reservoir	154
5.4.3	Force on the walls of an axially symmetric conduit of varying cross-section	157
5.4.4	Liquid sheets of varying thickness: the hydraulic jump	158
	Exercises	164
6	Potential Flow	166
6.1	Introduction	166
6.2	Definitions, properties and examples of potential flow	167
6.2.1	Characteristics and examples of velocity potentials	167
6.2.2	Uniqueness of the velocity potential	168
6.2.3	Velocity potentials for simple flows and combinations of potential functions	170
6.2.4	Examples of simple potential flows	174
6.3	Forces acting on an obstacle in potential flow	180
6.3.1	Two-dimensional flows	181
6.3.2	Added mass effects for a three-dimensional body undergoing acceleration in an ideal fluid	184
6.4	Linear surface waves on an ideal fluid	187
6.4.1	Swell, ripples and breaking waves	187
6.4.2	Trajectories of fluid particles during the passage of a wave	191
6.4.3	Solitons	192
6.4.4	Another example of potential flow in the presence of an interface: the Taylor bubble	193

6.5	Electrical analog for two-dimensional potential flows	194
6.5.1	Direct analog	195
6.5.2	Inverse analog	195
6.6	Complex velocity potential	196
6.6.1	Definition of the complex potential	196
6.6.2	Complex velocity potential for several types of flow	197
6.6.3	Conformal mapping	199
6A	Appendix: Velocity potentials and stream functions	206
6A.1	Velocity potentials and stream functions for two-dimensional flows	206
6A.2	Derivation of the velocity components from the stream function	207
6A.3	Derivation of the velocity components from the velocity potential function	207
	Exercises	207
7	Vorticity, Vortex Dynamics and Rotating Flows	210
7.1	Vorticity: its definition, and an example of straight vortex filaments	210
7.1.1	The concept of vorticity	210
7.1.2	A simple model of a line vortex: the Rankine vortex	212
7.1.3	Electromagnetic analogies	215
7.2	Dynamics of the circulation of the flow velocity	218
7.2.1	Kelvin's theorem: conservation of the circulation	218
7.2.2	Sources of circulation	221
7.3	Dynamics of vorticity	226
7.3.1	Transport equation for vorticity, and its consequences	226
7.3.2	Equilibrium between elongation and diffusion in the dynamics of vorticity	230
7.4	A few examples of distributions of vorticity concentrated along singularities	232
7.4.1	Vorticity concentrated along specific lines	232
7.4.2	Dynamics of a system of parallel-line vortices	233
7.4.3	Vortex rings	239
7.5	Vortices, vorticity and movement in air and water	241
7.5.1	Thrust due to an emission of vortices	241
7.5.2	The effects of lift	243
7.5.3	Lift and propulsion	246
7.6	Rotating fluids	247
7.6.1	Motion of a fluid in a rotating reference frame	247
7.6.2	Flows at small Rossby numbers	252
7.6.3	Waves within rotating fluids	255
7.6.4	The effect of viscosity near the walls: the Ekman layer	263
7.7	Vorticity, rotation and secondary flows	266
7.7.1	Secondary flows due to the curvature of channels or due to channels with a free surface	266
7.7.2	Secondary flows in transient motion	267
7.7.3	Secondary flows associated with Ekman layer effects	269
7A	Appendix - An almost perfect fluid: superfluid helium	270
7A.1	General considerations	270
7A.2	Two-fluid model for superfluid helium	271
7A.3	Experimental evidence for the existence of a superfluid component which flows without any energy dissipation	271
7A.4	Superfluid helium: a quantum fluid	272
7A.5	Experiments involving superfluid vortices	273
	Exercises	274

8 Quasi-Parallel Flows – Lubrication Approximation	277
8.1 Lubrication approximation	277
8.1.1 Quasi-parallel flows	277
8.1.2 Assumptions of the lubrication approximation	278
8.1.3 Non-stationary effects	280
8.1.4 Equations of motion in the lubrication approximation	280
8.1.5 An example of the application of the equation for lubrication: stationary flow between two moving planes making a small angle to each other	281
8.1.6 Flow of a fluid film of arbitrary thickness	283
8.1.7 Flow between two eccentric cylinders with nearly equal radii	286
8.1.8 Lubrication and surface roughness	288
8.2 Flow of liquid films having a free surface: hydrodynamics of wetting	288
8.2.1 Dynamics of thin liquid films, neglecting surface-tension effects	289
8.2.2 Dynamic contact angles	290
8.2.3 Dynamics of the spread of droplets on a flat surface	293
8.2.4 Flows resulting from surface-tension gradients: the Marangoni effect	296
8.3 Falling liquid cylindrical jet	300
8.3.1 Stable flow regime	300
8.3.2 Capillary effects and Rayleigh-Plateau instability of the jet	302
Exercises	304
9 Flows at Low Reynolds Number	308
9.1 Flows at small Reynolds number	308
9.1.1 Physical meaning of the Reynolds number	308
9.1.2 Examples of flows at low Reynolds number	309
9.1.3 Some important characteristic	310
9.2 Equation of motion at low Reynolds number	311
9.2.1 Stokes equation	311
9.2.2 Some equivalent forms of the Stokes equation	312
9.2.3 Properties of the solutions of the Stokes equation	312
9.2.4 Dimensional arguments for low Reynolds number flows	319
9.3 Forces and torques acting on a moving solid body	321
9.3.1 Linearity of the equations governing the velocity of the solid body and the forces acting on it	321
9.3.2 The effect of the symmetry properties of solid bodies on the applied forces and torques	322
9.3.3 Propulsion at low Reynolds numbers	326
9.4 Constant-velocity motion of a sphere in a viscous fluid	327
9.4.1 The velocity field around a moving sphere	327
9.4.2 Force acting on a moving sphere: the drag coefficient	331
9.4.3 Generalization of the solution of the Stokes equation to other experiments	333
9.5 Limitations of the Stokes description at low Reynolds numbers	338
9.5.1 Oseen's equation	338
9.5.2 Forces on an infinite circular cylinder in a uniform flow ($Re \ll 1$)	340
9.6 Dynamics of suspensions	341
9.6.1 Rheology of suspensions	342
9.6.2 Sedimentation of particles in suspension	344
9.7 Flow in porous media	345
9.7.1 A few examples	345
9.7.2 Parameters characterizing a porous medium	346

9.7.3	Flow in saturated porous media–Darcy’s Law	348
9.7.4	Simple models of the permeability of porous media	352
9.7.5	Relationship between the electrical conductivity and the permeability of porous media	354
9.7.6	Flow of immiscible fluids in a porous medium	356
	Exercises	360
10	Coupled Transport. Laminar Boundary Layers	363
10.1	Introduction	363
10.2	Structure of the boundary layer near a flat plate in uniform flow	364
10.3	Equations of motion within the boundary layer – Prandtl theory	366
10.3.1	Equations of motion near a flat plate	366
10.3.2	Transport of vorticity in the boundary layer	368
10.3.3	Self-similarity of the velocity profiles in the boundary layer for the case of uniform, constant, external velocity	368
10.4	Velocity profiles within boundary layers	370
10.4.1	Blasius equation for uniform external flow along a flat plate	370
10.4.2	Velocity profile: the solution of Blasius’s equation	371
10.4.3	Frictional force on a flat plate in uniform flow	373
10.4.4	Thicknesses of the boundary layers	374
10.4.5	Hydrodynamic stability of a laminar boundary layer – transition to turbulence	375
10.5	Laminar boundary layer in the presence of an external pressure gradient: boundary layer separation	376
10.5.1	Simplified physical treatment of the problem	376
10.5.2	Self-similar velocity profiles – flows of the form $U(x) = C x^m$	376
10.5.3	Boundary layers of constant thickness	379
10.5.4	Flows lacking self-similarity – boundary layer separation	380
10.5.5	Practical consequences of boundary layer separation	381
10.6	Aerodynamics and boundary layers	381
10.6.1	Control of boundary layers on an airplane wing	381
10.6.2	Aerodynamics of road vehicles and trains	383
10.6.3	Aerodynamics of other land-based vehicles	385
10.6.4	Active and reactive control of the drag force and of the lift	386
10.7	Wake and laminar jet	386
10.7.1	Equation of motion of the wake	386
10.7.2	Drag force on a body – relationship with the velocity in the wake	389
10.7.3	Two-dimensional laminar jet	392
10.8	Thermal and mass boundary layers	393
10.8.1	Thermal boundary layers	393
10.8.2	Concentration boundary layers, polarography	397
10.8.3	Taylor dispersion	403
10.9	Flames	406
10.9.1	Flames, mixing and chemical reactions	407
10.9.2	Laminar diffusion flames	408
10.9.3	Premixed flames	411
10.9.4	Instability of a plane, premixed flame	414
	Exercises	415
11	Hydrodynamic instabilities	417
11.1	A global approach to instability: the Landau model	417
11.1.1	A simple experimental model of a mechanical instability	418

11.1.2	Flow around a cylinder in the neighborhood of the vortex-generation threshold	420
11.1.3	Time-dependent evolution of the instabilities in the Landau model	420
11.2	The Rayleigh-Bénard instability	423
11.2.1	Convective thermal transport equations	423
11.2.2	Stability of a layer of fluid in the presence of a vertical gradient of temperature	424
11.2.3	Description of the Rayleigh-Bénard instability	425
11.2.4	Mechanism for the Rayleigh-Bénard instability and corresponding orders of magnitude	425
11.2.5	Two-dimensional solution of the Rayleigh-Bénard problem	427
11.2.6	The Landau model applied to Rayleigh-Bénard convection	432
11.2.7	Evolution toward turbulence above the convection threshold	432
11.3	Other closed box instabilities	433
11.3.1	Thermocapillary Bénard-Marangoni instability	433
11.3.2	Taylor-Couette instability	437
11.3.3	Other centrifugal instabilities	439
11.4	Instabilities in open flows	440
11.4.1	Kelvin-Helmholtz instability	440
11.4.2	Role of the shape of the velocity profile for open flows	445
11.4.3	Sub-critical instabilities for Poiseuille and Couette flows	446
12	Turbulence	448
12.1	A long history	448
12.2	The fundamental equations	449
12.2.1	Statistical description of turbulent flows	449
12.2.2	Derivatives of average values	450
12.2.3	Governing equations of turbulent flows	451
12.2.4	Energy balance in a turbulent flow	453
12.2.5	Transport of the vorticity in a turbulent flow	455
12.3	Empirical expressions for the Reynolds tensor and applications to free flows	457
12.3.1	Closure of the Reynolds equation	457
12.3.2	Eddy viscosity	458
12.3.3	Mixing length	458
12.3.4	Other practical approaches to turbulence	459
12.4	Free turbulent flows: jets and wakes	460
12.4.1	Basic properties of two-dimensional and turbulent jets and wakes	460
12.4.2	Self-similar velocity fields in two-dimensional jets and wakes	463
12.4.3	Three-dimensional axially symmetric turbulent jets and wakes	465
12.5	Flows near a solid wall	466
12.5.1	Qualitative properties of turbulent flows in the presence of a wall	466
12.5.2	Stationary turbulent flows parallel to a plane wall	466
12.5.3	Turbulent flow between two parallel plates	469
12.5.4	Pressure losses and coefficient of friction for flows between parallel planes and in tubes	473
12.5.5	Turbulent boundary layers	475
12.5.6	Separation of turbulent boundary layers	477
12.6	Homogeneous turbulence – Kolmogorov's theory	479
12.6.1	Energy cascade in a homogeneous turbulent flow	479
12.6.2	Spectral expression of Kolmogorov's laws	482
12.6.3	Experimental verification of Kolmogorov's theory	485

12.7	Other aspects of turbulence	486
12.7.1	Intermittent turbulence	486
12.7.2	Coherent turbulent structures	486
12.7.3	Dynamics of vortices in two-dimensional turbulence	487
	Exercises	488
	Solutions to the Exercises	491
	Bibliography	502
	Index	507
12 Turbulence		
12.1	A long pipe with a long pipe	676
12.2	The fundamental equations	678
12.2.1	Statistical description of turbulent flow	678
12.2.2	Derivatives of average values	679
12.2.3	Governing equations of turbulent flow	680
12.2.4	Energy balance in a turbulent flow	681
12.2.5	Transport of the vorticity in a turbulent flow	682
12.3	Empirical equations for the Reynolds stress and Reynolds stress tensor	686
12.3.1	Choice of the Reynolds equation	686
12.3.2	Eddy viscosity	688
12.3.3	Mixing length	690
12.3.4	Other practical approaches to turbulence	692
12.4	Free turbulent flows: jets and wakes	696
12.4.1	Basic properties of two-dimensional and three-dimensional jets and wakes	696
12.4.2	Self-similar velocity fields in two-dimensional jets and wakes	698
12.4.3	Three-dimensional axially symmetric turbulent jets and wakes	698
12.5	Flows near a solid wall	702
12.5.1	Qualitative properties of turbulent flow in the vicinity of a solid wall	702
12.5.2	Steady turbulent flows parallel to a plane wall	704
12.5.3	Turbulent flow between two parallel plates	706
12.5.4	Pressure losses and coefficient of friction for fully developed turbulent flow in pipes and ducts	708
12.5.5	Turbulent boundary layers	710
12.5.6	Separation in turbulent boundary layers	714
12.6	Homogeneous turbulence - Kolmogorov's theory	716
12.6.1	Energy cascade in a homogeneous turbulent flow	716
12.6.2	Spectral expansion of Kolmogorov's law	717
12.6.3	Experimental verification of Kolmogorov's theory	717
11.1	A global approach to the Navier-Stokes equations	417
11.1.1	Global approach to the Navier-Stokes equations	417
