

Contents

0. Preliminaries	1
0.0 Historical Introduction	1
0.1 Some Topics of Analysis in \mathbb{R}^3	4
0.2 The Laplace Equation	10
0.3 Problems	16
1. Electrostatics in Vacuum	18
1.1 Electric Charge, Field Strength and the Equations of Electrostatics	19
1.2 Multipole Expansion	24
1.3 Boundary Value Problems and Eigenfunction Expansion	27
1.4 Green's Functions	35
1.5 Energy of the Electric Field	43
1.6 Problems	47
2. The Relativity Principles and Maxwell's Equations ...	52
2.1 A Review of Special Relativity	53
2.2 Tensors in Minkowski Space	57
2.3 Lorentz Force and the Electromagnetic Field Tensor	62
2.4 Maxwell's Equations	66
2.5 Discussion of Maxwell's Equations, Induction Law	70
2.6 Conservation Laws	76
2.7 Problems	81
3. Electrodynamics in Vacuum	82
3.1 Stationary Magnetic Fields	82
3.2 Motion of Particles in Electromagnetic Fields	88
3.3 Electromagnetic Radiation	93
3.4 Production of Radiation, Electromagnetic Potentials	104
3.5 Electromagnetic Fields of Moving Particles	121
3.6 Lagrange Formalism of Electrodynamics	135
3.7 Problems	146
4. Phenomenological Electrodynamics in Simple Matter .	150
4.1 Derivation of the Phenomenological Maxwell's Equations	151
4.2 Phenomenological Maxwell's Equations and Constitutive Relations	157

4.3	Macroscopic Conservation Laws, Boundary Conditions ..	166
4.4	Motion of Particles Through Matter	175
4.5	Problems	185
5.	Optics	188
5.1	Reflection and Refraction	188
5.2	Light Scattering	196
5.3	Geometrical Optics	203
5.4	Diffraction	215
5.5	The Laser – An Optical Trumpet	229
5.6	Problems	238
6.	Epilogue: Quantum Electrodynamics	240
	Subject Index	247
