1 Welcome to the Materials World 1

The Clues: How to Discover the Facts 2

Effects 3

Concepts 3

Constructs 4

Your Mission 5

Clues About the Culture 7

Capabilities: Developing Your Potential for the Mission 9

Tools for the Mission 9

Planning Your Mission 10

2 Visiting the Travel Agency (or Selecting Your Material) 13

Design 14

Materials 17

Relationships 18

Translations 19

Selection Criteria 20

Values and Experience 20

Engineering Properties 22

Natural Materials 23

Engineering Constructs in Use 24

<i>Life Cycle Assessment</i>	24
<i>Processing</i>	26
<i>Finishing</i>	28
<i>Summing Up</i>	29

3 The Tool Shop (or Characterizing Your Material)

31

<i>Overview</i>	32
<i>An Approach to Characterization</i>	32
Step 1: The Question	32
Step 2: Techniques	34
Step 3: The Observations	38
Step 4: Interpretation	39
Step 5: Refine the Question	41
<i>Some Important Concepts Associated with Characterizations</i>	42
Phase	42
Crystal Structure	43
Scale and Magnification	44
Resolution	45
Pixels	47
Channels	48
Interaction Volume	48
Sensitivity	49
Accuracy	49
<i>Your Mission</i>	50
<i>Acronyms Used in this Chapter</i>	50

4 Entering the Metals Zone

53

<i>Introduction</i>	54
Metals, Metals, Everywhere	54
Communication Is Needed for Any Relationship (Misconceptions)	55
<i>Free Electrons (the Basic Chemistry of Metals)</i>	58
In the Beginning There Was Adam . . . Well, Actually the Atom	58
Chemical Attraction	59
Electron Speed Limit: None?	59
Ticket to Anywhere	60
<i>Bonding</i>	63
Personality Traits of Metals	63
Help Me, I'm Melting . . .	63
Stretchy and Springy	64
<i>Atomic Arrangements (Crystal Structures)</i>	64
Strong, Yet Gentle	64
Travel Smartly and Pack Efficiently	65
Crystal Clear	67
And Now for Something Different	68

<i>Defects (Imperfections in Crystals)</i>	70
A Nonperfect, Yet Interesting, World	70
Small Things with Large Consequences	71
This One Is Too Small, This One Is Too Big, But This One Is Just Right (Microstructures)	72
<i>Defect Interactions</i>	73
Building Muscle (Strengthening Mechanisms)	73
<i>Phase Stability and Transformations?</i>	75
How Do We Get There From Here? (Processing)	75
It's Just a Phase	76
Joy of Processing (Fabrication and Annealing)	78
Pygmalion . . . Microstructural Evolution	79
<i>Conclusion</i>	82
Putting It All Together	82

5 A Tour of Ceramic Land

85

<i>Common Misconceptions</i>	86
<i>Ceramics: What Are They?</i>	87
<i>Ceramics: How Are They Used?</i>	88
<i>Source of Ceramic Properties</i>	91
<i>Examples of Links Between Structure and Properties</i>	92
Ceramics Melt at High Temperatures	92
Some Ceramics Can Emit Light	92
<i>More on Crystal Structures</i>	94
The Structure of Glass	95
Crystal Structures of Traditional Ceramics	95
Advanced Ceramics	98
<i>How Do You Make a Ceramic Product?</i>	99
<i>Process Flow Diagram for a Traditional Ceramic</i>	101
<i>Ceramic Processes</i>	103
<i>Advanced Ceramic Processing</i>	104
<i>Ceramic Processes: Unifying Concepts</i>	104
Performance	106
<i>Parting Thoughts</i>	108

6 Interfacing with Composites

111

<i>Structure</i>	112
Interface	112
Bonds (Different Types of Relationships)	113
Pull-Out	115
Debonding (Breaking Up)	116
Measuring the Bond	116
Laminate Design and Properties	119
<i>Structure Property Relationships</i>	120

- Mechanics of Short Fiber: Shear Lag 123
- External Environment 124
- Design Tools 124
- Failure Analysis 126
- Failure Mechanisms 127
- Processing 128
 - Open Mold Processing 129
 - Autoclave Molding 130
 - Compression Molding 130
 - Filament Winding 130
 - Pultrusion 130
 - Liquid Molding 130
 - Processing Methods for Thermoplastics 131

7 The Land of Polymers

135

- How Are Polymers Made? (How Do We Form the Team?)* 137
- What Stops the Team from Growing Too Big?* 137
 - Termination 138
 - Inhibition 139
 - Autoacceleration 140
 - Chain Transfer 140
 - Nonlinear Step Polymerization 141
 - Copolymerization 141
- Structure* 142
 - Categorization 143
 - Crystallization 144
 - Crystal Defects 147
- Processing Route* 148
 - Making Things with Thermoplastics 148
 - Compression and Transfer Molding 148
 - Injection Molding 148
 - Extrusion 149
 - Blow Molding 149
 - Rotational Molding 149
 - Calendaring 149
 - Foaming 150
 - Vacuum Forming 150
 - Making Things with Thermosets 150
- Interaction of Structure and Processing* 150
- Polymer Behavior* 152
 - How Easily Will the Team Break Up and How Does It Behave? 152
 - Static Behavior at Room Temperature 153
 - Five Regions of Deformation 154
 - Stress Relaxation 156

- Recovery 156
Time Temperature Correspondence 156
Models 157
Polymer Degradation 158

8 Back to Nature

161

- You've Earned a Holiday!* 162
Biological Natural Materials 163
Geological Natural Materials 163
Traditional Natural Materials 164
Protein-Based Traditional Natural Materials 164
Wool 164
Silk 165
Plant-Based Traditional Natural Materials 167
Natural Polymers 167
Natural Rubber 167
Starch 168
Lignin 169
Pectin 169
Cellulose 170
Hemicellulose 172
Cellulose Fibers 173
Wood 174
Leaf Fibers: Sisal 183
Bast Fibers: Jute, Hemp, and Flax 187

9 An Electronic Trip Through Semiconductors

195

- Welcome* 196
The Concept Map 197
What Is a Semiconductor? 199
Electrons in Energy Space: Energy Bands 200
Generation of Charge Carriers 204
Thermal Generation of Charge Carriers 204
Photogeneration of Charge Carriers 207
Impurity Doping 208
Thermal Equilibrium in Semiconductors 211
Conductivity and Mobility 211
Carrier Mobility 212
Conductivity Dependence on Temperature 214
Optical Properties of Semiconductors 214
Light-Absorbing Semiconductors 214
Light-Emitting Semiconductors 215
Summing Up 216

10 Accident and Emergency

- Introduction 220
- Ductile or Brittle: A Competition 222
- Ductile Failure: Fast Fracture 222
- Ductile Failure: Creep 225
- Brittle Failure: Fast Fracture 227
- Brittle Failure: Fatigue 230
