# CONTENTS

<b>Preface</b>	<b>ix</b>
<b>1. Regulatory Hardwiring: A Brief Overview of the Genomic Control Apparatus and its Causal Role in Development and Evolution</b>	
<b>The Regulatory Apparatus Encoded in the DNA</b>	<b>2</b>
The Genes and Gene Regulatory Components of Animal Genomes	2
Overview of Regulatory Architecture	7
<b>Gene Regulatory Functions in Development</b>	<b>11</b>
The Regulatory Demands of Development	11
Pattern Formation	13
Terminal Differentiation	16
<b>Genomic Regulatory Sequence and the Evolution of Morphological Features</b>	<b>18</b>
Regulatory Evolution, and Evolution in General	19
Bilaterian Phylogeny	20
<b>2. Inside the <i>cis</i>-Regulatory Module: Control Logic, and How Regulatory Environment is Transduced into Spatial Patterns of Gene Expression</b>	
<b>Operating Principles for <i>cis</i>-Regulatory Systems that Mediate Developmental Specification Events</b>	<b>26</b>
<b>Spatial Repression in <i>cis</i>-Regulatory specification</b>	<b>28</b>
Two Very Different Examples of Similar Import	28
<i>cis</i> -Regulatory Design for Autonomous Modular Function	35
The Generality of Repression	41
<b>Downstream of Specification</b>	<b>44</b>
Some Examples	45

At the Beginning of Embryogenesis	46
Polyfunctional Downstream Modules	48
<b>The “Power” of the <i>cis</i>-Regulatory Module</b>	<b>49</b>
Diverse <i>cis</i> -Regulatory Outputs from a Simple Input	50
Direct Integration of Noncoincident Spatial Inputs	52
A <i>cis</i> -Regulatory Logic Device	54
<b>3. Regulation of Direct Cell-Type Specification in Early Development</b>	
<b>The Basic Package for Bilaterian Embryogenesis: Type 1 Specification Processes</b>	<b>64</b>
<b>Regulatory Mechanism in Territorial Specification of the Sea Urchin Embryo</b>	<b>66</b>
The Definitive Territories of the Embryo	66
Early Transcriptional Activation of Cell Type-specific Genes	71
Initial Regulatory Processes	74
Multiple Inputs for Endomesoderm Specification	75
<b>Regulatory Mechanisms Controlling Specification in Ascidian Embryos</b>	<b>81</b>
Territorial Specification	81
Mechanisms and Pathways in Mesoderm Specification	85
<b>Caenorhabditis elegans: The Genomic Apparatus for Endoderm Specification</b>	<b>92</b>
Endoderm Specification	93
The Network of Zygotic <i>cis</i> -Regulatory Interactions Required for Endoderm Specification	96
<b>Short Summary: Quality of Type 1 Regulatory Networks</b>	<b>101</b>
<b>4. The Secret of the Bilaterians: Abstract Regulatory Design in Building Adult Body Parts</b>	
<b>The Evolutionary Significance of “Pattern Formation”</b>	<b>103</b>
<b>The First Step: Transcriptional Definition of the Domain of the Body Part</b>	<b>105</b>
<b>Morphological Pieces and Regulatory Subpatterns</b>	<b>110</b>
Heart Parts	110
Forelimb and Hindlimb Buds	111
Transcriptional Domains in the Gut Endoderm	115
Patterns in the Developing Hindbrain	117

Appendage Parts and Transcriptional Patterns in <i>Drosophila</i> Imaginal Discs	121
<b>Glimpses of How It Works</b>	<b>122</b>
Transcriptional Domains and the Pattern Program for the <i>Drosophila</i> Wing Disc: Modularity and <i>cis</i> -Regulatory Inputs	123
Patterning the Heart Progenitor Field in <i>Drosophila</i>	129
Encoding Hindbrain Regulatory Patterns	131
The Role of Signaling	140
<b>The Last Routines: Calling in Differentiation Programs</b>	<b>146</b>
Specification of Peripheral Nervous System Elements in the <i>Drosophila</i> Wing	147
Installation of Cell Type-specific Differentiation Programs in the Pituitary	152
<b>Concluding Remark</b>	<b>153</b>
<b>5. Changes that Make New Forms: Gene Regulatory Systems and the Evolution of Body Plans</b>	
<b>Some Examples: Evolutionary Cooption of Genes to New Pattern Formation Functions</b>	<b>158</b>
<b><i>box</i> Gene Functions and Cooptions of the <i>box</i> Cluster Patterning System</b>	<b>164</b>
A Specific Case of A/P Patterning: How a <i>box</i> Gene Does Its Job	166
Evolutionary Changes in <i>box</i> Gene Expression in the Arthropods	167
Off the A/P Axis	174
Colinear Expression of <i>box</i> Genes in the Somatocoels of Sea Urchin Larvae	178
<b>Small Changes</b>	<b>183</b>
<b>Evolutionary Origins of Body Parts</b>	<b>188</b>
Polarity in Body Part Evolution	188
The Case of <i>pax6</i> and Some Other Amazing Examples	191
<b>Concluding Comment: Conceiving Evolution as a Process of Change in Regulatory Gene Networks</b>	<b>201</b>
<b>References</b>	<b>203</b>
<b>Index</b>	<b>245</b>
