Preface *page* xiii
Preface to Second Edition xv
Preface to First Edition xvii
A Note About Software xxi

1 Introduction 1
1.1 Development of Chemical Modeling 1
1.2 Scope of This Book 4

2 Modeling Overview 5
2.1 Conceptual Models 5
2.2 Configurations of Reaction Models 9
2.3 Uncertainty in Geochemical Modeling 17

PART I EQUILIBRIUM IN NATURAL WATERS 21

3 The Equilibrium State 23
3.1 Thermodynamic Description of Equilibrium 24
3.2 Choice of Basis 29
3.3 Governing Equations 30
3.4 Number of Variables and the Phase Rule 43

4 Solving for the Equilibrium State 45
4.1 Governing Equations 45
4.2 Solving Nonlinear Equations 46
4.3 Solving the Governing Equations 51
4.4 Finding the Stable Phase Assemblage 56

5 Changing the Basis 59
5.1 Determining the Transformation Matrix 60
5.2 Rewriting Reactions 62
5.3 Altering Equilibrium Constants 63
5.4 Re-expressing Bulk Composition 64

6 Equilibrium Models of Natural Waters 67
6.1 Chemical Model of Seawater 67

	6.2	Amazon River Water	78
	6.3	Red Sea Brine	81
7	**Redox Disequilibrium**		87
	7.1	Redox Potentials in Natural Waters	87
	7.2	Redox Coupling	88
	7.3	Morro do Ferro Groundwater	90
	7.4	Energy Available for Microbial Respiration	93
8	**Activity Coefficients**		97
	8.1	Debye–Hückel Methods	98
	8.2	Virial Methods	103
	8.3	Comparison of the Methods	111
	8.4	Brine Deposit at Sebkhat El Melah	114
9	**Sorption and Ion Exchange**		117
	9.1	Distribution Coefficient (K_d) Approach	117
	9.2	Freundlich Isotherms	119
	9.3	Langmuir Isotherms	120
	9.4	Ion Exchange	121
	9.5	Numerical Solution	124
	9.6	Example Calculations	126
10	**Surface Complexation**		131
	10.1	Complexation Reactions	132
	10.2	Effect of Surface Charge	133
	10.3	Governing Equations	137
	10.4	Numerical Solution	139
	10.5	Example Calculation	142
	10.6	Limitations of the Modeling	144
11	**Three-Layer Complexation**		147
	11.1	Triple-Layer Model	147
	11.2	CD-MUSIC Model	149
	11.3	Governing Equations	149
	11.4	Numerical Solution	151
	11.5	Example Calculation	153
	11.6	Choice of Complexation Data	156
12	**Automatic Reaction Balancing**		157
	12.1	Calculation Procedure	157
	12.2	Dissolution of Pyrite	162
	12.3	Equilibrium Equations	163
13	**Uniqueness**		167
	13.1	The Question of Uniqueness	167
	13.2	Examples of Nonunique Solutions	168
	13.3	Coping With Nonuniqueness	174

PART II REACTION PROCESSES 175

14 Mass Transfer 177
14.1 Simple Reactants 177
14.2 Extracting the Overall Reaction 180
14.3 Special Configurations 181

15 Polythermal, Fixed, and Sliding Paths 183
15.1 Polythermal Reaction 183
15.2 Fixed Activity and Fugacity 185
15.3 Sliding Activity and Fugacity 187

16 Geochemical Buffers 197
16.1 Buffers in Solution 197
16.2 Minerals as Buffers 202
16.3 Gas Buffers 207

17 Kinetics of Dissolution and Precipitation 211
17.1 Kinetic Rate Laws 212
17.2 From Laboratory to Application 215
17.3 Numerical Solution 216
17.4 Example Calculations 218
17.5 Modeling Strategy 221

18 Redox Kinetics 223
18.1 Rate Laws for Oxidation and Reduction 223
18.2 Heterogeneous Catalysis 225
18.3 Enzymes 227
18.4 Numerical Solution 228
18.5 Example Calculation 229

19 Microbial Kinetics 233
19.1 Microbial Respiration and Fermentation 233
19.2 Monod Equation 235
19.3 Thermodynamically Consistent Rate Laws 236
19.4 General Kinetic Model 237
19.5 Example Calculation 239

20 Association and Dissociation Kinetics 243
20.1 Kinetic Rate Laws 243
20.2 Numerical Solution 245
20.3 Aluminum Fluoride Complexation 250

21 Kinetics of Gas Transfer 255
21.1 Kinetic Rate Laws 255
21.2 Numerical Solution 256
21.3 CO_2 Efflux From a Small Lake 258

22	**Stable Isotopes**	261
	22.1 Isotope Fractionation	262
	22.2 Mass Balance Equations	263
	22.3 Fractionation in Reacting Systems	265
	22.4 Dolomitization of a Limestone	268
23	**Transport in Flowing Groundwater**	273
	23.1 Groundwater Flow	273
	23.2 Mass Transport	275
	23.3 Advection–Dispersion Equation	279
	23.4 Numerical Solution	280
	23.5 Example Calculation	284
24	**Reactive Transport**	289
	24.1 Mathematical Model	289
	24.2 Numerical Solution	293
	24.3 Example Calculations	295
25	**Stagnant Zones**	303
	25.1 Conceptual Model	303
	25.2 Governing Equations	304
	25.3 Numerical Solution	306
	25.4 Example Calculation	306
	PART III APPLIED REACTION MODELING	311
26	**Hydrothermal Fluids**	313
	26.1 Origin of a Fluorite Deposit	313
	26.2 Black Smokers	318
	26.3 Energy Available to Thermophiles	322
27	**Geothermometry**	331
	27.1 Principles of Geothermometry	332
	27.2 Hot Spring at Hveravik, Iceland	336
	27.3 Geothermal Fields in Iceland	339
28	**Evaporation**	345
	28.1 Springs and Saline Lakes of the Sierra Nevada	345
	28.2 Chemical Evolution of Mono Lake	349
	28.3 Evaporation of Seawater	353
29	**Sediment Diagenesis**	359
	29.1 Dolomite Cement in the Gippsland Basin	360
	29.2 Lyons Sandstone, Denver Basin	363
30	**Kinetics of Water–Rock Interaction**	371
	30.1 Approach to Equilibrium and Steady State	371
	30.2 Quartz Deposition in a Fracture	375
	30.3 Silica Transport in an Aquifer	378

30.4 Ostwald's Step Rule 379
30.5 Dissolution of Albite 381

31 Weathering 385
31.1 Rainwater Infiltration in an Aquifer 385
31.2 Weathering in a Soil 388

32 Oxidation and Reduction 393
32.1 Uranyl Reduction by Ferrous Iron 393
32.2 Autocatalytic Oxidation of Manganese 396
32.3 Microbial Degradation of Phenol 399

33 Waste Injection Wells 403
33.1 Caustic Waste Injected in Dolomite 403
33.2 Gas Blowouts 406

34 Petroleum Reservoirs 409
34.1 Sulfate Scaling in North Sea Oil Fields 410
34.2 Alkali Flooding 414

35 Acid Drainage 421
35.1 Role of Atmospheric Oxygen 421
35.2 Buffering by Wall Rocks 424
35.3 Fate of Dissolved Metals 426

36 Contamination and Remediation 431
36.1 Contamination With Inorganic Lead 431
36.2 Groundwater Chromatography 435

37 Microbial Communities 439
37.1 Arsenate Reduction by *B. arsenicoselenatis* 439
37.2 Zoning in an Aquifer 443

***Appendix A* Sources of Modeling Software** 451

***Appendix B* Evaluating the HMW Activity Model** 455

***Appendix C* Minerals in the LLNL Database** 461

***Appendix D* Nonlinear Rate Laws** 469
