

CONTENTS

1	An overview of fibred semantics and the combination of logics	1
1.1	Introduction	1
1.1.1	Combining pure logical systems	2
1.1.2	Combining meta-level with the object level	4
1.1.3	Self-fibring of predicate logics	4
1.1.4	Temporalising a system	5
1.1.5	Making your logic fuzzy	5
1.1.6	Combining proof systems	6
1.2	The Idea of Fibring	6
1.2.1	Appreciation of the difficulties involved in combining systems	7
1.2.2	The basic idea of fibring	9
1.2.3	General fibring	10
1.2.4	Case study: modal logic fibring and dovetailing	14
1.2.5	Step by step scenario for fibring two logics	17
2	Logics and their semantics	18
2.1	Fibring Basic Relational Semantics	18
2.2	Fibring Preferential Semantics	26
2.3	Completeness Theorems—A Discussion	36
3	Combining modal logics	39
3.1	Introducing Modal Fibring	39
3.1.1	Basic definitions and examples	42
3.1.2	Ways of combining	48
3.2	Fibring Modalities	53
3.3	Dovetailing Modal Logics	64
3.4	Fibring and Dovetailing Modal Fragments	70
3.5	Decidability	74
4	Intuitionistic modal logics	76
4.1	Introduction	76
4.2	Fibring Modality into Intuitionistic Logic	77
5	Discussion and comparison with the literature	91
5.1	Intuitionistic Modal Logics	91
5.2	Multimodal Logics	110
6	Introducing self-fibring	112
6.1	Introduction and Background	112
6.2	Free Logic	115

7	Self-fibring of predicate logics	124
7.1	Self-fibred Semantics for Substitution	124
7.1.1	Discussion of our options	124
7.1.2	Basic semantics and completeness theorems	125
7.1.3	Refinements of the semantics	135
7.2	Self-fibring and Equality	137
7.3	Fibring Predicate Logics with Binary Relations	140
8	Self-fibring with function symbols	148
8.1	Fibring Predicate Logics with Function Symbols	148
8.2	Fibred Semantics for Ambivalent Syntax	152
9	Self-fibring of intuitionistic logic	158
9.1	Introduction	158
9.2	Intuitionistic Language with Unary Predicates	161
9.3	Intuitionistic Language with Binary Predicates	164
9.4	Intuitionistic Language with Unary Functions	165
9.5	Intuitionistic Language with Equality	167
9.6	Fibring Kripke Intuitionistic Models	170
10	Applications of self-fibring	175
10.1	Connection and Translation	175
10.2	Fixed Point Self-reference	179
10.3	Németi's Generalised Assignment Models	182
10.4	Generalised Quantifiers	184
10.5	McCarthy's and Buvač's Context Systems	194
10.5.1	The system B of context	194
10.5.2	Comparison with the literature	197
10.6	Natural Language Quantifiers	198
10.6.1	Introduction	198
10.6.2	Dynamic treatment of quantifiers	201
10.6.3	Conclusion and further applications	202
10.7	Default and Non-monotonic Reasoning	202
10.7.1	Introduction	202
10.7.2	The operator M	203
10.7.3	The non-monotonic component	204
10.7.4	Restricted monotonicity	205
10.7.5	Connection with fibring	206
10.8	The Subjunctive Conditional	206
10.9	Discussion and Conclusion	208
11	Conditional implications and non-monotonic consequence	210
11.1	Introduction	210
11.2	Non-monotonic Companion	212
11.3	Reflecting into the Object Level	215
11.4	Semantics for the Conditional	225

12	How to make your logic fuzzy	227
12.1	Introduction and Motivating Examples	227
12.2	Fibring with Łukasiewicz Logic	231
12.3	Fuzzy Modal Logic	241
12.4	Making a Fuzzy Logic Even More Fuzzy	247
12.5	Comparison with the Literature	251
12.6	Case Study: Fuzzy Automata	253
13	Combining temporal logic systems	255
13.1	Introduction	255
13.2	Preliminaries	260
13.3	Combining Logics	263
13.4	Temporalising a Logic	266
13.5	Independent Combination	268
13.6	Full Join	272
13.7	Restricted Join	274
13.8	The Two-dimensional Diagonal	277
13.9	Conclusion	281
14	Fibring implication logics	283
14.1	Introduction	283
14.2	Background on Substructural Implication	284
14.2.1	Consequence relations	284
14.2.2	Uniform semantics for substructural implications	285
14.2.3	Soundness and completeness	286
14.3	LKE	288
14.3.1	The classical KE system	289
14.3.2	LKE for substructural implication	289
14.4	Fibring Substructural Implication Logics	294
14.4.1	Preliminary investigations	295
14.4.2	Simplified fibred models	298
14.4.3	Structured consequence relations	299
14.4.4	The fibred canonical model	300
14.5	LKE for Multi-implication Systems	301
14.5.1	Examples	302
15	Grafting modalities onto substructural implication systems	307
15.1	Introduction	307
15.2	Information Frames	308
15.3	The Modal Operators	309
	Seriality	313
	Reflexivity	313
	Transitivity	313
	Symmetry	314
	Euclideanism	314

Directedness	314
15.4 The canonical model	316
15.5 Adding Modalities to the LKE system	318
15.5.1 Modal LKE rules	318
Elimination rules for \Box	319
Elimination rules for \Diamond	319
15.5.2 Some examples	319
15.5.3 Completeness of modal LKE	325
16 Products of modal logics	327
16.1 Introduction and Background	327
16.1.1 Joining (product) of Kripke semantics	328
16.1.2 Fusion of two logics	329
16.1.3 Background results	329
16.2 Basic Definitions and Notations	331
16.3 Fusions and Products	334
16.4 Thickening and Unravelling	337
16.5 Recursive Axiomatisability	338
16.6 Products of Minimal Modal Logics	345
16.7 Products of PTC-logics	348
16.8 Counterexamples	351
16.9 Products of some Known Systems	353
16.9.1 The logic $\mathbf{S4.3}^2 = \mathbf{S4.3} \times \mathbf{S4.3}$	353
16.9.2 The logic $\mathbf{S4.3} \times \mathbf{S5}$	354
16.9.3 The logics $\mathbf{S4.1.3} \times \mathbf{S4.3}$, $\mathbf{S4.1.3}^2$, $\mathbf{S4.1.3} \times \mathbf{S5}$	355
16.10 The Finite Model Property	356
16.11 Finite Depth and Model Properties for \mathbf{K}^2	361
16.12 Two-dimensional Normal Forms	364
16.13 The Finite Model Property via Filtrations	368
16.14 Applications to Predicate Logics	372
16.15 Case Study: Transition Systems	375
16.16 Conclusion: Further Results and Questions	378
17 Fibring intuitionistic logic programs	380
17.1 Introduction	380
17.2 Intuitionistic Logic Programming	381
17.2.1 Overview	381
17.2.2 Syntax of QN-PROLOG	382
17.2.3 Procedural semantics of QN-PROLOG	382
17.2.4 Model semantics of QN-PROLOG	384
17.2.5 The relation between procedural and model semantics	385
17.2.6 An example: semantic tableaux	385
17.3 Fibring of QN-PROLOG Programs	387
17.3.1 The intuition behind fibring QN-PROLOG programs	387

17.3.2	Fibring procedural semantics	391
17.3.3	Fibring model semantics	393
17.3.4	The relation between fibred procedural and fibred model semantics	395
17.3.5	Fibring semantic tableaux and rigid E -unification	395
17.3.6	Instantiating the general framework	397
17.4	Incremental Databases	399
17.5	Conclusion	400
18	Fibring semantic tableaux	401
18.1	Introduction	401
18.2	Logics	402
18.3	Tableau Calculi	403
18.4	Fibring of Logics	409
18.5	Example: First-order Predicate Logic	410
18.5.1	The logical system of first-order logic	410
18.5.2	A tableau calculus for first-order logic	411
18.6	Fibring of Tableau Calculi	416
18.6.1	Example: fibring calculi for intuitionistic logics	417
19	Fibring modal tableaux	421
19.1	Introduction	421
19.2	Label Formalism	424
19.3	Unifications	427
19.3.1	Basic unifications (axiom unifications)	427
19.3.2	High unifications (combined unifications)	429
19.3.3	Low unification (logic unifications)	429
19.3.4	Fibred unification	430
19.4	Inference Rules	432
19.5	Soundness and Completeness	434
20	Fibring labelled deductive systems	440
20.1	Introduction	440
20.2	Viewing LDS as a Fibred Logic	444
20.3	Fibring two algebras	445
21	Conclusion and discussion	457
	References	459
