

Brief Contents

■ UNIT I An Idea that Changed the World 1

- CHAPTER 1 Evolutionary Biology 3
- CHAPTER 2 The Tree of Life 29
- CHAPTER 3 Natural Selection and Adaptation 59

■ UNIT II How Evolution Works 81

- CHAPTER 4 Mutation and Variation 83
- CHAPTER 5 The Genetical Theory of Natural Selection 107
- CHAPTER 6 Genetic Drift: Evolution at Random 139
- CHAPTER 7 The Evolution of Quantitative Traits 167
- CHAPTER 8 Evolution in Space 199

■ UNIT III The Products of Evolution 223

- CHAPTER 9 Species and Speciation 225
- CHAPTER 10 The Evolution of Genes and Genomes 261
- CHAPTER 11 Evolution and Development 285

■ UNIT IV Interactions Between Individuals and Species 315

- CHAPTER 12 All About Sex 317
- CHAPTER 13 Cooperation and Conflict 345
- CHAPTER 14 Evolutionary Ecology: How to Be Fit 373
- CHAPTER 15 Evolutionary Ecology: Interactions among Species 397

■ UNIT V The History of Life 423

- CHAPTER 16 Phylogeny: The Unity and Diversity of Life 425
- CHAPTER 17 The History of Life 451
- CHAPTER 18 The Evolution of Biological Diversity 487
- CHAPTER 19 Macroevolution: Evolution above the Species Level 519

■ UNIT VI Evolution of *Homo sapiens* 547

- CHAPTER 20 The Evolutionary Story of *Homo sapiens* 549
- CHAPTER 21 Evolution and Society 575

■ UNIT VII A Statistics Primer 601

- CHAPTER 22 A Statistics Primer 603

Contents

UNIT I An Idea that Changed the World 1

1 Evolutionary Biology 3

- 1.1 The Evolution of SARS-CoV-2 4
- 1.2 “Nothing in Biology Makes Sense Except in the Light of Evolution” 8
- 1.3 What Is Evolution? Is It Fact or Theory? 9
- 1.4 The Evolution of Evolutionary Biology 10
 - Before Darwin 11
 - Charles Darwin 13
- 1.5 Darwin’s Evolutionary Theory 15
- 1.6 Evolutionary Biology after Darwin 16
 - The evolutionary synthesis 17
 - Evolutionary biology since the synthesis 19
- **BOX 1.1** Fundamental Principles of Biological Evolution 20
- 1.7 How Evolution Is Studied 21
- 1.8 Philosophical Issues 22
 - Ethics, religion, and evolution 23
 - How to Learn Evolutionary Biology (Read This!) 24
- SUMMARY** 26

2 The Tree of Life 29

- 2.1 The Tree of Life, from Darwin to Today 30
 - **BOX 2.1** Classification, Taxonomic Practice, and Nomenclature 33
- 2.2 Phylogenetic Trees 34
 - Inferring phylogenies: An introduction 37
 - **BOX 2.2** Models in Evolutionary Biology 40
- 2.3 Variations on the Phylogenetic Theme 41
 - Branches of a phylogenetic tree sometimes rejoin 41
 - Not only organisms have “phylogenies” 42
- 2.4 How Phylogenies are Useful 45
 - Classification 45
 - Inferring the history of character evolution 45
 - Estimating time of divergence 46
 - Patterns of evolution 47
 - **BOX 2.3** Evidence for Evolution 48
 - Phylogenies describe patterns of diversification 54
- SUMMARY** 56

3 Natural Selection and Adaptation 59

- 3.1 Adaptive Evolution Observed 61
- 3.2 Natural Selection 64
 - The meaning of natural selection 64
 - Natural selection and chance 65
 - The effective environment depends on the organism 66
- 3.3 Levels of Selection 66
 - Selfish genes and unselfish behaviors 67
 - Selection of organisms and groups 68
 - Species selection 69

- 3.4 The Nature of Adaptations 70
 - Selection of and selection for 70
 - Recognizing adaptations 71
- 3.5 Imperfections and Constraints 75
- 3.6 Natural Selection and the Evolution of Diversity 76
- 3.7 What Not to Expect of Natural Selection 77
- SUMMARY 78**

UNIT II How Evolution Works 81

4 Mutation and Variation 83

- 4.1 The Machinery of Inheritance 84
- 4.2 The Inheritance of Variation 86
 - Gene mixing by segregation 88
 - Gene mixing by recombination 90
 - Gene mixing with asexual inheritance 93
 - Gene mixing by hybridization 93
- 4.3 Mutation: The Ultimate Source of Variation 93
 - Point mutations 94
 - Structural mutations 94
 - Whole genome duplication 96

- 4.4 Rates and Effects of Mutations 96
 - Mutation rates 97
 - Effects of mutations 97
 - **BOX 4.1** Estimating Mutation Rates 98
 - Germ line mutations and somatic mutations 100
- 4.5 Is Mutation Random? 100
- 4.6 Nongenetic Inheritance 102
- What We Don't Know* 104
- SUMMARY 104**

5 The Genetical Theory of Natural Selection 107

- 5.1 We Can Watch Natural Selection and Evolution Happening in Real Time 108
- 5.2 Evolution by Natural Selection and Inheritance 111
 - Fitness: The unit we use to measure selection 111
- 5.3 Positive Selection and the Spread of Beneficial Mutations 112
 - **BOX 5.1** Evolution by Positive Selection on a Single Locus 113

- The rate of evolution 114
- Chance and adaptation: The probability that a beneficial mutation spreads 119
- 5.4 Natural Selection Has Side Effects 120
 - Hitchhiking: When one allele goes for a ride with another 121
- 5.5 Balancing Selection Preserves Genetic Variation 124
 - Overdominance 125
 - Other kinds of balancing selection 126

- 5.6 Selection That Favors the Spread of Common Alleles** 128
- Underdominance: When heterozygotes suffer 129
 - Positive frequency-dependent selection 130
- 5.7 The Evolution of a Population's Mean Fitness** 130
- The fundamental theorem of natural selection and the adaptive landscape 131

- 5.8 Many Mutations Are Harmful** 133
- A mutation-selection balance 133
 - The mutation load 134

SUMMARY 135

6 Genetic Drift: Evolution at Random 139

- 6.1 What Is Random Genetic Drift?** 140
- 6.2 How Strong Is Genetic Drift?** 144
- Populations that change in size 145
- 6.3 The Genealogy of Genes** 147
- 6.4 Genetic Drift and Genetic Variation within Species** 149
- Estimating population size 151
- 6.5 Genetic Drift and Natural Selection** 153
- Crossing an adaptive valley by drift 156
 - The fate of beneficial mutations in large populations 156

- 6.6 The Neutral Theory of Molecular Evolution** 157
- 6.7 Searching the Genes for Signatures of Adaptation** 159
- Synonymous versus nonsynonymous differences 160
 - The MK test 161
 - Divergence among populations 162

What We Don't Know 163

SUMMARY 163

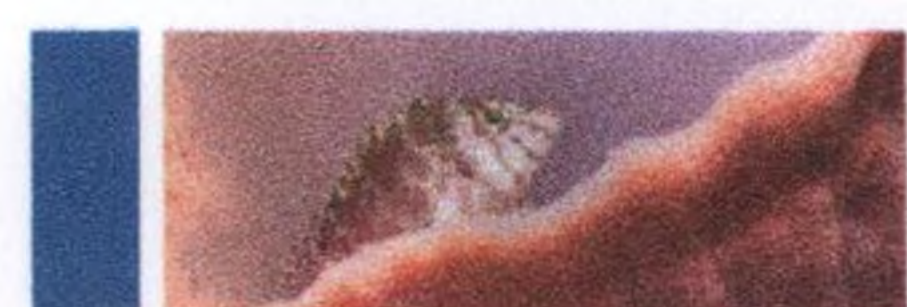

7 The Evolution of Quantitative Traits 167

- 7.1 Genotypes and Phenotypes** 168
- Quantitative traits evolve by changes in allele frequencies 170
- 7.2 Selection on Quantitative Traits** 171
- Measuring the strength of selection 175
- 7.3 Evolution by Directional Selection** 176
- Adaptation from standing genetic variation and from new mutations 179
 - Can adaptation rescue species from extinction? 180
- 7.4 Connecting Variation in Genes to Variation in Phenotypes** 181
- When genes interact: Dominance and epistasis 182

- 7.5 Artificial Selection** 182
- 7.6 The Evolution of Correlated Traits** 184
- Evolutionary constraints and trade-offs 185
 - The causes of genetic correlations 188
- 7.7 Phenotypic Plasticity** 188
- 7.8 The Genetic Basis of Quantitative Traits** 189
- Quantitative trait loci 189

What We Don't Know 194

SUMMARY 194

8 Evolution in Space 199

- 8.1 Patterns in Space 200
- 8.2 Genes in Motion 204
 - How is gene flow measured? 206
- 8.3 Gene Flow versus Selection 208
 - A migration-selection balance 208
 - Clines 209
 - Tension zones 211
- 8.4 Gene Flow, Genetic Drift, and Detecting Selection 212
 - The effects of history 213
 - Gene flow, local adaptation, and drift 214
- 8.5 The Evolution of Dispersal 214
- 8.6 The Evolution of a Species' Range 217
- What We Don't Know* 219
- SUMMARY 220

UNIT III The Products of Evolution 223

9 Species and Speciation 225

- 9.1 What Are Species? 227
 - **BOX 9.1** Diagnosis of a New Species 232
- 9.2 Reproductive Isolation 232
 - Prezygotic barriers 235
 - Postzygotic barriers 236
 - How fast does reproductive isolation evolve? 238
- 9.3 The Geography of Speciation 240
 - Allopatric speciation 241
 - Sympatric speciation 242
 - Speciation with limited gene flow 246
 - Secondary contact 246
- 9.4 The Origins of Reproductive Isolation 249
 - Ecological speciation 249
 - Mutation order speciation 250
 - Speciation by genetic conflict 251
 - Speciation by sexual selection 252
 - Speciation by polyploidy 252
 - Speciation by random genetic drift 254
 - Speciation by hybridization 255
- 9.5 The Genomics of Speciation 256
- 9.6 Speciation and Diversification 256
- What We Don't Know* 257
- SUMMARY 258

10 The Evolution of Genes and Genomes 261

- 10.1 The Birth and Death of Genes 263
 - Gene families 267
 - The death of a gene 269
- 10.2 Evolution of Protein-Coding Genes 269
 - Evolution of coding regions by genetic drift 270
 - Evolution of coding regions by positive selection 270
 - Evolution of gene expression 272
- 10.3 The Evolution of Gene and Chromosome Structure 274
 - Chromosome evolution 275
- 10.4 Evolution of Genome Size and Content 277
 - Genomes large and small 277
 - Genetic parasites and transposable elements 278
 - Routes to the evolution of the smallest and largest genomes 280
- What We Don't Know* 281
- SUMMARY 282

11 Evolution and Development 285

- 11.1 Comparative Development and Evolution 287
- 11.2 Gene Regulation 292
 - **BOX 11.1** Some Methods in Developmental Genetics 293
 - Hox genes and the genetic tool kit 294
- 11.3 Developmental Bases of Phenotypic Evolution 297
 - A study in developmental evolution: Tetrapod limbs 299
 - A study in developmental evolution: Flower symmetry 300
- 11.4 How Development Affects Morphological Evolution 301
 - Facilitation 302
 - Developmental bias 304
 - Constraints on adaptive evolution 305
- 11.5 Phenotypic Plasticity, Canalization, and Genetic Assimilation 307
 - Does phenotypic plasticity contribute to evolution? 309
- What We Don't Know* 311
- SUMMARY** 312

UNIT IV Interactions Between Individuals and Species 315

12 All About Sex 317

- 12.1 The Astonishing Diversity of Ways That Organisms Have Sex 318
 - What are females and males? 319
 - Microbial sex 320
- 12.2 What Is Sexual Selection? 320
 - Why are males sexually selected? 323
- 12.3 Sexual Selection by Male-Male Competition 325
 - Sexual selection in flowering plants 327
- 12.4 Sexual Selection by Female Choice 327
- 12.5 Sex Determination and Sex Ratios 330
 - The evolution of sex ratios 331
- 12.6 Why Is There Sex? 333
 - Advantages to sex in changing environments 335
 - Selective interference favors sex and recombination 336
 - The evolution of recombination in sexual populations 338
- 12.7 Selfing and Outcrossing 339
- What We Don't Know* 341
- SUMMARY** 342

13 Cooperation and Conflict 345

- 13.1 The Evolution of Social Interactions 346
- 13.2 Shared Genes and the Evolution of Altruism 347
 - **BOX 13.1** Calculating Relatedness 349
 - **BOX 13.2** Altruistic Mating Displays in Turkeys 350
 - Spite 352
- 13.3 Cooperation among Unrelated Individuals 352
 - Reciprocity 352
 - **BOX 13.3** Evolutionarily Stable Strategies 354
- 13.4 Conflict and Cooperation in Close Quarters: The Family 355
 - Conflict between mates 355
 - Murder in the family 357
 - Parent-offspring conflict 357
 - Eusocial animals: The ultimate families 359

13.5 Levels of Selection 360

Selfish DNA 361

Selfish mitochondria 363

Selfish symbionts 364

Group selection 364

Species selection 366

13.6 Cooperation and Major Evolutionary Transitions 366

What We Don't Know 368

SUMMARY 368

14 Evolutionary Ecology: How to Be Fit 373

14.1 Life History Traits as Components of Fitness 375

Fitness in populations with overlapping generations 376

14.2 The Evolution of Life History Characteristics 377

Senescence 378

Number of offspring 381

Age at maturity 382

14.3 Density and the Evolution of the Population Growth Rate 383

Life histories, fast and slow 384

Semelparous and iteroparous reproduction 385

Life histories and mating strategies 387

14.4 Phenology 388

14.5 Ecological Niches: Specialists and Generalists 390

How specialization evolves 391

Experiments on niche evolution 393

What We Don't Know 393

SUMMARY 394

15 Evolutionary Ecology: Interactions among Species 397

15.1 Coevolution and Interactions among Species 498

15.2 The Evolution of Enemies and Victims 401

Aposematism and mimicry 404

Plants and herbivores 405

Parasite-host interactions and infectious disease 406

The evolution of virulence 407

15.3 Mutualisms 409

15.4 The Evolution of Competitive Interactions 414

15.5 Evolution and Community Structure 416

What We Don't Know 419

SUMMARY 419

UNIT V The History of Life 423

16 Phylogeny: The Unity and Diversity of Life 425

16.1 Estimating Phylogenies 426

Why estimating phylogenies can be hard 428

16.2 Methods for Estimating Phylogenies 434

16.3 How Do We Use Phylogenies? 437

Dating evolutionary events 437

Discovering the history of genes and cultures 438

Reconstructing ancestors 439

16.4 Studying Adaptations: The Comparative Method 441

16.5 Classification 443

What We Don't Know 446

SUMMARY 447

17 The History of Life 451

- 17.1 Some Geological Fundamentals 452
 - The fossil record 454
- 17.2 The Origin of Life 454
- 17.3 Precambrian Life 457
- 17.4 The Origins of Animal Diversity 459
- 17.5 Paleozoic Life 462
 - The colonization of land 464
 - Paleozoic life on land 467
 - The end-Permian mass extinction 469

- 17.6 Mesozoic Life 470
- 17.7 The Cenozoic Era 477
 - The modern world takes shape 477
 - The adaptive radiation of mammals 479
 - Pleistocene events 482

What We Don't Know 484

SUMMARY 484

18 The Evolution of Biological Diversity 487

- 18.1 Biogeography 489
- 18.2 Historical Explanations of Geographic Distributions 492
 - Extinction 493
 - Dispersal 493
 - Vicariance 494
- 18.3 Ecological Limits on Geographic Range 497
 - Dispersal 497
 - Ecological niches 497
 - Interacting species 498
- 18.4 Studying Changes in Biological Diversity 499

- A model of changes in diversity 499
- Studying diversity in the fossil record 500

- 18.5 Diversity through the Phanerozoic 501
 - Rates of extinction and origination 502
 - Mass extinctions 504

- 18.6 Phylogenetic Studies of Diversity 505
 - The shapes of phylogenies 508

- 18.7 Has Species Diversity Reached a Limit? 509

- 18.8 Geographic Variation in Species Diversity 513

What We Don't Know 515

SUMMARY 516

19 Macroevolution: Evolution above the Species Level 519

- 19.1 The Origin of Major Forms of Life' 520
 - The origin of mammals 520
- 19.2 Gradualism and Saltation 523
 - Complex characteristics 525
- 19.3 The Evolution of Novelty 527
 - Incipient and novel features:
 - Permissive conditions and natural selection 527
 - Homology and the emergence of novel characters 529

- 19.4 From Microevolution to Macroevolution 533
 - Rates of evolution 533
 - Speciation and character evolution 535

- 19.5 Is Evolution Predictable? 536

- 19.6 Trends and Progress 538

- Trends: Kinds and causes 538
- Are there major trends in the history of life? 540
- The question of progress 543

What We Don't Know 543

SUMMARY 544

UNIT VI Evolution of *Homo sapiens* 547

20 The Evolutionary Story of *Homo sapiens* 549

- 20.1 Where Did We Come From? 550
 - Our closest living relatives 550
 - How we differ from other apes 552
- 20.2 Our Ancestry: Hominins through Time 553
- 20.3 The Appearance of Modern *Homo sapiens* 557
 - The human history of hybridization 558
 - The diversity of human populations 559
- 20.4 Brain and Language 560
- 20.5 Diet and Agriculture: A Revolution in Our World 562
 - BOX 20.1 Domesticated Plants and Animals 564
- 20.6 Natural Selection, Past and Present 565
 - Our genetic loads 566
 - Natural selection and evolution in our lifetimes 567
 - Evolutionary mismatches 568
- 20.7 The Evolution of Culture 569
- SUMMARY 571

21 Evolution and Society 575

- 21.1 Science and Skeptics 576
 - How science works 576
 - Creationism 577
 - The evidence for evolution 578
 - BOX 21.1 Refuting Anti-evolutionary Arguments 579
- 21.2 The Uses and Implications of Evolutionary Science 584
 - Practical applications of evolutionary science 584
- 21.3 Evolution and Human Behavior 594
 - Variation in cognitive and behavioral traits 594
 - Human behavior: Evolution and culture 596
 - Understanding nature and humanity 597
- 21.4 Agriculture and natural resources 585
- 21.5 Conservation 586
- BOX 21.2 The Current Extinction Crisis 587
- 21.6 Health and medicine 590
- SUMMARY 598

UNIT VII A Statistics Primer 601

22 A Statistics Primer 603

- 22.1 Probability Distributions 604
- 22.2 Descriptive Statistics 605
- 22.3 Estimation and Testing Hypotheses 610
- 22.4 Likelihood 613
- SUMMARY 614

Appendix A-1
