<i>Preface</i>	x
<b>1. Introduction</b>	1
1.1 Studying environmental policy outcomes at the crossroads between economics and political science	1
1.2 Green taxes and voluntary environmental agreements	4
1.3 Types of environmental regulation	6
1.4 The problem: What makes indirect regulation effective?	9
1.5 The CO <sub>2</sub> case study	14
1.6 Outline of the book	16
<b>2. Approaches to environmental governance in economics and political science</b>	19
2.1 The limits of the rational approach to environmental governance	20
2.2 The limits of the institutional approach to environmental regulation	27
2.3 Conclusion	35
<b>3. A dual institutional approach</b>	38
3.1 Rational institutionalism	39
3.2 Classifying institutional factors	42
3.3 The micro-level effects of institutions	47
3.4 A theoretical framework for analysing policy outcomes	52
3.5 Unfolding the theoretical framework	56
<b>4. Voluntary agreements and the free-rider problem</b>	59
4.1 Agreements and collective goods	59
4.2 Indirect environmental regulation and the supply of pollution abatement	61
4.3 Free-riding in agreements with complete information	64
4.4 Free-riding in agreements with incomplete information	70
4.5 Concluding remarks	75

<b>5. Institutions, social capital and voluntary environmental agreements</b>	77
5.1 What determines the effectiveness of voluntary agreements?	77
5.2 Institutional conditions for effective VAs: Mandatory rules	83
5.3 Social capital and cooperation in VAs: Conventional rules	90
5.4 Conclusion	96
<b>6. On the institutional design and effectiveness of green taxes</b>	100
6.1 Green taxes and the role of institutions	101
6.2 The institutional design of green taxes	102
6.3 Implementation procedures	110
6.4 Are emission taxes dynamically efficient?	111
6.5 Conclusion on emission taxes	116
6.6 Conclusion on the effectiveness of taxes and voluntary agreements	117
<b>7. Comparative analysis of CO<sub>2</sub> policies towards the industrial sector</b>	120
7.1 The empirical study: Industrial CO <sub>2</sub> pollution abatement	120
7.2 Explaining industrial CO <sub>2</sub> emission reductions	122
7.3 Method and research design	130
7.4 Conclusion	138
<b>8. Indirect regulation of industrial CO<sub>2</sub> pollution in Austria, Denmark and the Netherlands</b>	141
8.1 Energy structure	142
8.2 Denmark: The CO <sub>2</sub> tax strategy	145
8.3 The Netherlands: Voluntary energy agreements	151
8.4 Austria: Non-intervention and information assistance	159
8.5 Conclusion	164
<b>9. A comparative analysis of CO<sub>2</sub> policy performance at the national level</b>	167
9.1 Introduction	167
9.2 Absolute industrial CO <sub>2</sub> emissions, 1980–2000	168
9.3 Relative industrial CO <sub>2</sub> emissions, 1980–2000	171
9.4 Energy efficiency improvements and energy conversion	175
9.5 Conclusion	183
<b>10. Econometric analysis of industrial CO<sub>2</sub> emissions over the period 1958–2000</b>	187
10.1 Theory on energy demand	188
10.2 The cointegration approach to time series analysis	191
10.3 Estimating CO <sub>2</sub> time series data from a two-step model	197
10.4 Conclusion	217

<b>11. The micro-level: policy stimulation of cleaner energy technologies</b>	221
11.1 Energy decisions and rationality	222
11.2 CO <sub>2</sub> policy incentives and energy decisions	233
11.3 Conclusion	242
<b>12. Reflections on theory and policies</b>	246
12.1 Rational theory and the power of prediction	246
12.2 Structural determinism rejected: The limits of corporatism and other national background institutions	248
12.3 Corporatism, social capital and consociational democracy	249
12.4 Policy incentives matter	251
12.5 Institutions shape incentives: The effect of mandatory and conventional rules	252
12.6 Normative considerations: Agreements or taxes?	255
12.7 Suggestions for further research	257
Appendix 1. Statistical data sources	259
Appendix 2. List of interviewed organizations	261
