TABLE OF CONTENTS

Preface xi

Preface to the second edition xiii

CHAPTER I. BACKGROUND IN TOPOLOGY 1

1. Extension and embedding properties 1
2. Homotopical properties of spaces 10
3. Approximative and proximative retracts 19
4. Hyperspaces of metric spaces 22
5. The Čech homology (cohomology) functor 27
6. Maps of spaces of finite type 35
7. The Čech homology functor with compact carriers 36
8. Vietoris maps 38
9. Homology of open subsets of Euclidean spaces 42
10. The (ordinary) Lefschetz number 46
11. The generalized Lefschetz number 49
12. The coincidence problem 53

CHAPTER II. MULTIVALUED MAPPINGS 61

13. General properties 61
14. Upper semicontinuous mappings 68
15. Lower semicontinuous mappings 71
16. Michael's selection theorem 75
17. σ-Selectionable mappings 78
18. Directionally continuous selections 82
19. Measurable selections 86
20. Borsuk and Hausdorff continuity of multivalued mappings 94
21. Banach contraction principle for multivalued maps 96

CHAPTER III. APPROXIMATION METHODS IN FIXED POINT THEORY OF MULTIVALUED MAPPINGS 105

22. Graph–approximation 105
23. Existence of approximations 111
24. Homotopy 117
25. The fixed point index in $A(X)$ 120
26. Topological degree in $\mathbb{R}^n$ 123
27. Topological degree for mappings with non-compact values in $\mathbb{R}^n$ 130
28. Topological degree in normed spaces 143
29. Topological degree of vector fields with non-compact values in Banach spaces 147
30. Topological essentiality 151
31. Random fixed points 155

CHAPTER IV. HOMOLOGICAL METHODS IN FIXED POINT THEORY OF MULTIVALUED MAPPINGS 159

32. Acyclic mappings 159
33. Strongly acyclic maps 163
34. The fixed point index for acyclic maps of Euclidean neighbourhood retracts 166
35. The Nielsen number 173
36. n-Acyclic mappings 183
37. Theorem on antipodes for n-acyclic mappings 188
38. Theorem on invariance of domain 193
39. n-Acyclic compact vector fields in normed spaces 196
40. Admissible mappings 200
41. The Lefschetz fixed point theorem for admissible mappings 204
42. The Lefschetz fixed point theorem for non-compact admissible mappings 209
43. n-Admissible mappings 213
44. Category of morphisms 226
45. The Lefschetz fixed point theorem for morphisms 232
46. Homotopical classification theorems for morphisms 233
47. The fixed point index for morphisms 237
48. Noncompact morphisms 244
49. n-Morphisms 248

50. Multivalued maps with nonconnected values 249
51. A fixed point index of decompositions for finite polyhedra 264
52. Fixed point index of decompositions for compact ANRs 269
53. Fixed point index of decompositions for arbitrary ANRs 276
54. Spheric mappings 278

CHAPTER V. CONSEQUENCES AND APPLICATIONS 283

55. Birkhoff–Kellog, Rothe and Poincaré theorems 283
56. Fixed point property and families of multivalued mappings 287
57. The Lefschetz fixed point theorem for pairs of spaces 291
58. Repulsive and ejective fixed points 293
59. Condensing and k-set contraction mappings 298
60. Compacting mappings 304
61. Fixed points of differentiable multivalued maps 306
62. The generalized topological degree for acyclic mappings 314
63. The bifurcation index 319
64. Multivalued dynamical systems 324
65. Minimax theorems for ANRs 334
66. KKM-mappings 341
67. Topological dimension of the set of fixed points 346
68. On the basis problem in normed spaces 348

CHAPTER VI. FIXED POINT THEORY APPROACH TO DIFFERENTIAL INCLUSIONS 351

69. Aronszajn type of results 351
70. Solution sets for differential inclusions 356
71. The lower semicontinuous case 362
72. Periodic solutions for differential inclusions in $\mathbb{R}^n$ 367
73. Differential inclusions on proximate retracts 373
74. Implicit differential inclusions 377
75. Concluding remarks and comments 382

CHAPTER VII. RECENT RESULTS 385

76. Periodic invariants; the Euler–Poincaré characteristic 385
77. The coincidence Nielsen number 388
78. Fixed points of symmetric product mappings 404
79. The category of weighted maps 409

80. Darbo homology functor and its applications to fixed point problems 421
81. More about spheric mappings 423
82. A coincidence index involving Fredholm operators 436
83. Fixed points of monotone-type multivalued operators 464
84. Multivalued Poincaré operators 471
85. Multivalued fractals 481

Bibliography 511
