	Preface to the Second Edition	<i>ix</i>
	Preface to First Edition	<i>xi</i>
	About the Companion Website	<i>xiii</i>
1	What is Density Functional Theory?	1
1.1	How to Approach This Book	1
1.2	Examples of DFT in Action	2
1.2.1	Ammonia Synthesis by Heterogeneous Catalysis	2
1.2.2	Embrittlement of Metals by Trace Impurities	3
1.2.3	Materials Properties for Modeling Planetary Formation	4
1.2.4	Screening Large Collections of Materials to Develop Photoanodes	5
1.3	The Schrödinger Equation	7
1.4	Density Functional Theory – From Wavefunctions to Electron Density	9
1.5	The Exchange-Correlation Functional	12
1.6	The Quantum Chemistry Tourist	13
1.6.1	Localized and Spatially Extended Functions	13
1.6.2	Wavefunction-Based Methods	15
1.6.3	The Hartree–Fock Method	15
1.6.4	Beyond Hartree–Fock	18
1.7	What Can DFT Not Do?	22
1.8	Density Functional Theory in Other Fields	23
1.9	How to Approach This Book (Revisited)	24
1.10	Which Code Should I Use?	25
	Further Reading	26
	References	27
2	DFT Calculations for Simple Solids	29
2.1	Periodic Structures, Supercells, and Lattice Parameters	29
2.2	Face-Centered Cubic Materials	31
2.3	Hexagonal Close-Packed Materials	32
2.4	Crystal Structure Prediction	35
2.5	Phase Transformations	35
	Exercises	37
	Further Reading	37
	Appendix – Calculation Details	38
	Reference	38

3	Nuts and Bolts of DFT Calculations	39
3.1	Reciprocal Space and k -Points	40
3.1.1	Plane Waves and the Brillouin Zone	40
3.1.2	Integrals in k -Space	42
3.1.3	Choosing k -Points in the Brillouin Zone	43
3.1.4	Metals – Special Cases in k -Space	47
3.1.5	Summary of k -Space	48
3.2	Energy Cutoffs	49
3.2.1	Pseudopotentials	50
3.3	Numerical Optimization	51
3.3.1	Optimization in One Dimension	52
3.3.2	Optimization in More Than One Dimension	54
3.3.3	What Do I Really Need to Know About Optimization?	57
3.4	DFT Total Energies – An Iterative Optimization Problem	58
3.5	Geometry Optimization	59
3.5.1	Internal Degrees of Freedom	59
3.5.2	Geometry Optimization with Constrained Atoms	61
3.5.3	Optimizing Supercell Volume and Shape	61
	Exercises	62
	Further Reading	63
	Appendix – Calculation Details	64
	References	64
4	Accuracy of DFT Calculations	65
4.1	How Accurate are DFT Calculations?	65
4.2	Choosing a Functional	69
4.3	Examples of Physical Accuracy	73
4.3.1	Benchmark Calculations for Molecular Systems – Energy and Geometry	74
4.3.2	Benchmark Calculations for Molecular Systems – Vibrational Frequencies	75
4.3.3	Crystal Structures and Cohesive Energies	75
4.3.4	Adsorption Energies and Bond Strengths	76
4.4	When Might DFT Fail?	77
	Exercises	78
	Further Reading	79
	References	79
5	DFT Calculations for Surfaces of Solids	81
5.1	Why Surfaces are Important	81
5.2	Periodic Boundary Conditions and Slab Models	82
5.3	Choosing k -Points for Surface Calculations	85
5.4	Classification of Surfaces by Miller Indices	85
5.5	Surface Relaxation	88
5.6	Calculation of Surface Energies	91
5.7	Symmetric and Asymmetric Slab Models	92
5.8	Surface Reconstruction	93

5.9	Adsorbates on Surfaces	95
5.9.1	Accuracy of Adsorption Energies	98
5.10	Effects of Surface Coverage	99
5.11	DFT Calculations for Grain Boundaries	101
	Exercises	102
	Further Reading	103
	Appendix – Calculation Details	104
	References	105
6	DFT Calculations of Vibrational Frequencies	107
6.1	Isolated Molecules	107
6.2	Vibrations of a Collection of Atoms	110
6.3	Molecules on Surfaces	112
6.4	Zero-Point Energies	114
6.5	Reaction Energies at Finite Temperatures	118
6.6	Phonons and Delocalized Modes	119
	Exercises	120
	Further Reading	120
	Appendix – Calculation Details	121
	Reference	122
7	Calculating Rates of Chemical Processes Using Transition State Theory	123
7.1	One-Dimensional Example	124
7.2	Multidimensional Transition State Theory	128
7.3	Finding Transition States	131
7.3.1	Elastic Band Method	132
7.3.2	Nudged Elastic Band Method	134
7.3.3	Initializing NEB Calculations	135
7.4	Finding the Right Transition States	137
7.5	Connecting Individual Rates to Overall Dynamics	139
7.6	Quantum Effects and Other Complications	141
7.6.1	High Temperatures/Low Barriers	142
7.6.2	Quantum Tunneling	142
7.6.3	Zero-Point Energies	142
	Exercises	143
	Further Reading	144
	Appendix – Calculation Details	145
	Reference	146
8	Predicting Equilibrium Phase Diagrams and Electrochemistry Using Open Ensemble Methods	147
8.1	Stability of Bulk Metal Oxides	148
8.1.1	Examples Including Disorder – Configurational Entropy	152
8.2	Stability of Metal and Metal Oxide Surfaces	154

8.3	DFT for Electrochemistry: The Computational Hydrogen Electrode	156
8.4	Using DFT to Predict Dissolution of Solids in Electrochemical Environments	159
	Exercises	161
	Further Reading	162
	Appendix – Calculation Details	163
	References	163
9	Electronic Structure and Magnetic Properties	165
9.1	Electronic Density of States	165
9.2	Local DOS and Atomic Charges	170
9.3	Magnetism	172
	Exercises	174
	Further Reading	174
	Appendix – Calculation Details	175
10	Ab Initio Molecular Dynamics	177
10.1	Classical Molecular Dynamics	177
10.1.1	Molecular Dynamics with Constant Energy	177
10.1.2	Molecular Dynamics in the Canonical Ensemble	179
10.1.3	Practical Aspects of Classical Molecular Dynamics	180
10.2	Ab Initio Molecular Dynamics	180
10.3	Applications of Ab Initio MD	182
10.3.1	Exploring Structurally Complex Materials: Liquids and Amorphous Phases	182
10.3.2	Exploring Complex Energy Surfaces	183
	Exercises	186
	Further Reading	186
	Appendix – Calculation Details	188
	References	188
11	Methods Beyond “Standard” Calculations	189
11.1	Estimating Uncertainties in DFT	189
11.2	DFT+X Methods for Improved Treatment of Electron Correlation	191
11.2.1	Dispersion Interactions and DFT-D	191
11.2.2	Self-Interaction Error, Strongly Correlated Electron Systems and DFT+U	192
11.3	Random Phase Approximation	194
11.4	TD-DFT	196
11.5	Larger System Sizes with Linear Scaling Methods and Classical Forcefields	197
11.6	Conclusion	197
	Further Reading	198
	References	199
	Index	201
