## CHAPTER 1. TOPOLOGICAL SPACES AND FUNCTIONS

1-1	Introduction . . . . .	1
1-2	Topological spaces . . . . .	5
1-3	Basis and subbasis of a topology . . . . .	6
1-4	Metric spaces and metric topologies . . . . .	9
1-5	Continuous mappings . . . . .	12
1-6	Connectedness. Subspace topologies . . . . .	14
1-7	Compactness . . . . .	18
1-8	Product spaces . . . . .	21
1-9	Some theorems in logic . . . . .	23
1-10	The Tychonoff theorem . . . . .	25
1-11	Function spaces . . . . .	28
1-12	Uniform continuity and uniform spaces . . . . .	30
*1-13	Kuratowski's closure operation . . . . .	32
1-14	Topological groups . . . . .	33

## CHAPTER 2. THE ELEMENTS OF POINT-SET TOPOLOGY

2-1	Introduction . . . . .	37
2-2	Separation axioms . . . . .	37
2-3	$T_3$ - and $T_4$ -spaces . . . . .	40
2-4	Continua in Hausdorff spaces . . . . .	43
2-5	The interval and the circle . . . . .	52
2-6	Real functions on a space . . . . .	56
2-7	The Tietze extension theorem . . . . .	59
2-8	Completely separable spaces . . . . .	64
2-9	Mappings into Hilbert space. A metrization theorem . . . . .	67
2-10	Locally compact spaces . . . . .	71
*2-11	Paracompact spaces . . . . .	77
*2-12	A general metrization theorem . . . . .	80
2-13	Complete metric spaces. The Baire-Moore theorem . . . . .	81
2-14	Inverse limit systems . . . . .	91
*2-15	A characterization of the Cantor set . . . . .	97
2-16	Limits inferior and superior . . . . .	100

## CHAPTER 3. FURTHER TOPICS IN POINT-SET TOPOLOGY

3-1	Locally connected spaces . . . . .	105
3-2	Arcs, arcwise connectivity, and accessibility . . . . .	115
3-3	Mappings of the interval . . . . .	122
3-4	Mappings of the Cantor set . . . . .	126

3-5	The Hahn-Mazurkiewicz theorem . . . . .	129
3-6	Decomposition spaces and continuous transformations . . . . .	132
3-7	Monotone and light mappings . . . . .	136
*3-8	Indecomposable continua . . . . .	139
*3-9	Dimension theory . . . . .	145
<b>CHAPTER 4. THE ELEMENTS OF HOMOTOPY THEORY</b>		
4-1	Introduction . . . . .	149
4-2	Homotopic mappings . . . . .	150
4-3	Essential and inessential mappings . . . . .	154
4-4	Homotopically equivalent spaces . . . . .	157
4-5	The fundamental group . . . . .	159
4-6	Knots and related imbedding problems . . . . .	174
4-7	The higher homotopy groups . . . . .	178
4-8	Covering spaces . . . . .	188
*4-9	Homotopy connectedness and homotopy local connectedness . . . . .	190
<b>CHAPTER 5. POLYTOPES AND TRIANGULATED SPACES</b>		
5-1	Introduction . . . . .	193
5-2	Vector spaces . . . . .	193
5-3	$E^n$ as a vector space over $E^1$ . Barycentric coordinates. . . . .	195
5-4	Geometric complexes and polytopes . . . . .	199
5-5	Barycentric subdivision . . . . .	206
5-6	Simplicial mappings and the simplicial approximation theorem . . . . .	209
5-7	Abstract simplicial complexes . . . . .	213
*5-8	An imbedding theorem for polytopes . . . . .	214
<b>CHAPTER 6. SIMPLICIAL HOMOLOGY THEORY</b>		
6-1	Introduction . . . . .	218
6-2	Oriented complexes . . . . .	222
6-3	Incidence numbers . . . . .	223
6-4	Chains, cycles, and groups . . . . .	225
6-5	The decomposition theorem for abelian groups. Betti numbers and torsion coefficients . . . . .	234
6-6	Zero-dimensional homology groups . . . . .	238
6-7	The Euler-Poincaré formula . . . . .	241
6-8	Some general remarks . . . . .	243
*6-9	Universal coefficients . . . . .	244
6-10	Simplicial mappings again . . . . .	248
6-11	Chain-mappings . . . . .	253
6-12	Cone-complexes . . . . .	257
6-13	Barycentric subdivision again . . . . .	258
6-14	The Brouwer degree . . . . .	263
6-15	The fundamental theorem of algebra, an existence proof . . . . .	269
6-16	The no-retraction theorem and the Brouwer fixed-point theorem . . . . .	271
6-17	Mappings into spheres . . . . .	273

## CHAPTER 7. FURTHER DEVELOPMENTS IN ALGEBRAIC TOPOLOGY

7-1	Relative homology groups . . . . .	282
7-2	The exact homology sequence . . . . .	284
7-3	Homomorphisms of exact sequences . . . . .	287
7-4	The excision theorem . . . . .	288
7-5	The Mayer-Vietoris sequence . . . . .	290
7-6	Some general remarks . . . . .	293
7-7	The Eilenberg-Steenrod axioms for homology theory . . . . .	293
7-8	Relative homotopy theory . . . . .	295
7-9	Cohomology groups . . . . .	297
7-10	Relations between chain and cochain groups . . . . .	300
7-11	Simplicial and chain-mappings . . . . .	303
7-12	The cohomology product . . . . .	306
7-13	The cap-product . . . . .	310
7-14	Relative cohomology theory . . . . .	312
7-15	Exact sequences in cohomology theory . . . . .	315
7-16	Relations between homology and cohomology groups . . . . .	317

## CHAPTER 8. GENERAL HOMOLOGY THEORIES

8-1	Čech homology theory (introduction) . . . . .	320
8-2	The topological invariance of simplicial homology groups . . . . .	332
8-3	Čech homology theory (continued) . . . . .	337
8-4	Induced homomorphisms . . . . .	339
*8-5	Singular homology theory . . . . .	341
*8-6	Vietoris homology theory . . . . .	346
*8-7	Homology local connectedness . . . . .	347
8-8	Some topology of the $n$ -sphere . . . . .	350
