

CONTENTS

I. SPACES AND TENSORS

SECTION	PAGE
1.1. The generalized idea of a space	3
1.2. Transformation of coordinates. Summation convention	6
1.3. Contravariant vectors and tensors. Invariants	9
1.4. Covariant vectors and tensors. Mixed tensors	12
1.5. Addition, multiplication, and contraction of tensors	15
1.6. Tests for tensor character	18
1.7. Compressed notation	20
Summary I	22
Exercises I	23

II. BASIC OPERATIONS IN RIEMANNIAN SPACE

2.1. The metric tensor and the line element	26
2.2. The conjugate tensor. Lowering and raising suffixes	29
2.3. Magnitude of a vector. Angle between vectors	33
2.4. Geodesics and geodesic null lines. Christoffel symbols	37
2.5. Derivatives of tensors	47
2.6. Special coordinate systems	58
2.7. Frenet formulae	72
Summary II	76
Exercises II	78

III. CURVATURE OF SPACE

3.1. The curvature tensor	81
3.2. The Ricci tensor, the curvature invariant, and the Einstein tensor	88

SECTION	PAGE
3.3. Geodesic deviation	90
3.4. Riemannian curvature	93
3.5. Parallel propagation	99
Summary III	107
Exercises III	108
 IV. SPECIAL TYPES OF SPACE 	
4.1. Space of constant curvature	111
4.2. Flat space	118
4.3. Cartesian tensors	127
4.4. A space of constant curvature regarded as a sphere in a flat space	136
Summary IV	138
Exercises IV	139
 V. APPLICATIONS TO CLASSICAL DYNAMICS 	
5.1. Physical components of tensors	142
5.2. Dynamics of a particle	149
5.3. Dynamics of a rigid body	156
5.4. Moving frames of reference	162
5.5. General dynamical systems	168
Summary V	184
Exercises V	186
 VI. APPLICATIONS TO HYDRODYNAMICS, ELASTICITY, AND ELECTROMAGNETIC RADIATION 	
6.1. Hydrodynamics	190
6.2. Elasticity	202
6.3. Electromagnetic radiation	213
Summary VI	232
Exercises VI	234

VII. RELATIVE TENSORS, IDEAS OF VOLUME, GREEN-STOKES THEOREMS

7.1. Relative tensors, generalized Kronecker delta, permutation symbol	240
7.2. Change of weight. Differentiation	248
7.3. Extension	252
7.4. Volume	262
7.5. Stokes' theorem	267
7.6. Green's theorem	275
Summary VII	277
Exercises VII	278

VIII. NON-RIEMANNIAN SPACES

8.1. Absolute derivative. Spaces with a linear connection. Paths	282
8.2. Spaces with symmetric connection. Curvature	292
8.3. Weyl spaces. Riemannian spaces. Projective spaces	296
Summary VIII	306
Exercises VIII	307

Appendix A. Reduction of a Quadratic Form	313
Appendix B. Multiple Integration	316
BIBLIOGRAPHY	319
INDEX	321
