	<i>Preface</i>	v
1	Introduction	1
1.1	What Is Logistics Management?	1
1.2	Managing Cost and Uncertainty	3
1.3	Examples	4
1.4	Modeling Logistics Problems	7
1.5	Logistics in Practice	7
1.6	Evaluation of Solution Techniques	9
1.7	Additional Topics	10
1.8	Book Overview	11
I	Performance Analysis Techniques	12
2	Convexity and Supermodularity	13
2.1	Introduction	13
2.2	Convex Analysis	13
2.2.1	Convex Sets and Convex Functions	13
2.2.2	Continuity and Differentiability Properties	16
2.2.3	Characterization of Convex Functions	20
2.2.4	Convexity and Optimization	23
2.3	Supermodularity	24
2.4	Exercises	31
3	Worst-Case Analysis	33
3.1	Introduction	33
3.2	The Bin-Packing Problem	34
3.2.1	First-Fit and Best-Fit	36

3.2.2	First-Fit Decreasing and Best-Fit Decreasing	39
3.3	The Traveling Salesman Problem	40
3.3.1	A Minimum Spanning Tree Based Heuristic	41
3.3.2	The Nearest Insertion Heuristic	42
3.3.3	Christofides' Heuristic	46
3.3.4	Local Search Heuristics	49
3.4	Exercises	50
4	Average-Case Analysis	55
4.1	Introduction	55
4.2	The Bin-Packing Problem	56
4.3	The Traveling Salesman Problem	61
4.4	Exercises	66
5	Mathematical Programming Based Bounds	69
5.1	Introduction	69
5.2	An Asymptotically Tight Linear Program	70
5.3	Lagrangian Relaxation	73
5.4	Lagrangian Relaxation and the Traveling Salesman Problem	75
5.4.1	The 1-Tree Lower Bound	76
5.4.2	The 1-Tree Lower Bound and Lagrangian Relaxation	77
5.5	The Worst-Case Effectiveness of the 1-tree Lower Bound	78
5.6	Exercises	82
II	Inventory Models	84
6	Economic Lot Size Models with Constant Demands	85
6.1	Introduction	85
6.1.1	The Economic Lot Size Model	85
6.1.2	The Finite Horizon Model	87
6.1.3	Power of Two Policies	89
6.2	Multi-Item Inventory Models	91
6.2.1	Introduction	91
6.2.2	Notation and Assumptions	93
6.2.3	Worst-Case Analyses	93
6.3	A Single Warehouse Multi-Retailer Model	98
6.3.1	Introduction	98
6.3.2	Notation and Assumptions	98
6.4	Exercises	103
7	Economic Lot Size Models with Varying Demands	105
7.1	The Wagner-Whitin Model	105
7.2	Models with Capacity Constraints	111
7.3	Multi-Item Inventory Models	114

7.4	Exercises	116
8	Stochastic Inventory Models	119
8.1	Introduction	119
8.2	Single Period Models	120
8.2.1	The Model	120
8.3	Finite Horizon Models	121
8.3.1	Model Description	121
8.3.2	K -Convex Functions	123
8.3.3	Main Results	126
8.4	Quasiconvex Loss Functions	127
8.5	Infinite Horizon Models	130
8.6	Multi-Echelon Systems	137
8.7	Exercises	139
9	Integration of Inventory and Pricing	141
9.1	Introduction	141
9.2	Single Period Models	142
9.3	Finite Horizon Models	145
9.3.1	Model Description	145
9.3.2	Symmetric K -Convex Functions	148
9.3.3	Additive Demand Functions	153
9.3.4	General Demand Functions	155
9.3.5	Special Case: Zero Fixed Ordering Cost	156
9.3.6	Extensions and Challenges	157
9.4	Risk Averse Inventory Models	158
9.4.1	Expected utility risk averse models	159
9.4.2	Exponential utility risk averse models	161
9.5	Exercises	163
III	Design and Coordination Models	166
10	Procurement Contracts	167
10.1	Introduction	167
10.2	Wholesale Contracts	169
10.3	Buy Back Contracts	171
10.4	Revenue Sharing Contracts	172
10.5	Portfolio Contracts	173
10.6	Exercises	177
11	Supply Chain Planning Models	179
11.1	Introduction	179
11.2	The Shipper Problem	180
11.2.1	The Shipper Model	181

11.2.2	A Set-Partitioning Approach	182
11.2.3	Structural Properties	186
11.2.4	Solution Procedure	187
11.2.5	Computational Results	190
11.3	Safety Stock Optimization	194
11.4	Exercises	196
12	Facility Location Models	199
12.1	Introduction	199
12.2	An Algorithm for the p -Median Problem	200
12.3	An Algorithm for the Single-Source Capacitated Facility Location Problem	204
12.4	A Distribution System Design Problem	207
12.5	The Structure of the Asymptotic Optimal Solution	212
12.6	Exercises	213
IV	Vehicle Routing Models	215
13	The Capacitated VRP with Equal Demands	217
13.1	Introduction	217
13.2	Worst-Case Analysis of Heuristics	218
13.3	The Asymptotic Optimal Solution Value	223
13.4	Asymptotically Optimal Heuristics	225
13.5	Exercises	228
14	The Capacitated VRP with Unequal Demands	229
14.1	Introduction	229
14.2	Heuristics for the CVRP	229
14.3	Worst-Case Analysis of Heuristics	233
14.4	The Asymptotic Optimal Solution Value	236
14.4.1	A Lower Bound	237
14.4.2	An Upper Bound	240
14.5	Probabilistic Analysis of Classical Heuristics	242
14.5.1	A Lower Bound	244
14.5.2	The UOP(α) Heuristic	246
14.6	The Uniform Model	248
14.7	The Location-Based Heuristic	250
14.8	Rate of Convergence to the Asymptotic Value	253
14.9	Exercises	254
15	The VRP with Time Window Constraints	257
15.1	Introduction	257
15.2	The Model	257
15.3	The Asymptotic Optimal Solution Value	259

15.4	An Asymptotically Optimal Heuristic	265
15.4.1	The Location-Based Heuristic	265
15.4.2	A Solution Method for CVLPTW	267
15.4.3	Implementation	269
15.4.4	Numerical Study	269
15.5	Exercises	272
16	Solving the VRP Using a Column Generation Approach	275
16.1	Introduction	275
16.2	Solving a Relaxation of the Set-Partitioning Formulation	276
16.3	Solving the Set-Partitioning Problem	280
16.3.1	Identifying Violated Clique Constraints	282
16.3.2	Identifying Violated Odd Hole Constraints	282
16.4	The Effectiveness of the Set-Partitioning Formulation	283
16.4.1	Motivation	284
16.4.2	Proof of Theorem 8.4.1	285
16.5	Exercises	288
V	Logistics Algorithms in Practice	292
17	Network Planning	293
17.1	Introduction	293
17.2	Network Design	294
17.3	Strategic Safety Stock	305
17.4	Resource Allocation	313
17.5	Summary	317
17.6	Exercises	318
18	A Case Study: School Bus Routing	319
18.1	Introduction	319
18.2	The Setting	320
18.3	Literature Review	322
18.4	The Problem in New York City	323
18.5	Distance and Time Estimation	325
18.6	The Routing Algorithm	327
18.7	Additional Constraints and Features	331
18.8	The Interactive Mode	333
18.9	Data, Implementation and Results	334
19	References	337
	Index	350
