Contents

I. INTRODUCTION AND OVERVIEW **1**

§ 1. Introduction 1
§ 2. Elementary considerations and examples 2
§ 3. Processes with stationary independent increments 6
§ 4. Canonical representations 11
§ 5. The central limit problem 13
§ 6. Other types of divisibility 19
§ 7. Notes 21

II. INFINITELY DIVISIBLE DISTRIBUTIONS ON THE NONNEGATIVE INTEGERS **23**

§ 1. Introduction 23
§ 2. Elementary properties 25
§ 3. Compound distributions 30
§ 4. Canonical representation 34
§ 5. Compound-exponential distributions 39
§ 6. Closure properties 43
§ 7. Moments 46
§ 8. Support 50
§ 9. Tail behaviour 54
§10. Log-convexity 59
§11. Examples 65
§12. Notes 75

III. INFINITELY DIVISIBLE DISTRIBUTIONS ON THE NONNEGATIVE REALS **77**

§ 1. Introduction 77
§ 2. Elementary properties 79
§ 3. Compound distributions 84
§ 4. Canonical representation 89

§ 5. Compound-exponential distributions 99
§ 6. Closure properties 103
§ 7. Moments 106
§ 8. Support 109
§ 9. Tail behaviour 113
§10. Log-convexity 116
§11. Examples 124
§12. Notes 133

IV. INFINITELY DIVISIBLE DISTRIBUTIONS ON THE REAL LINE 135

§ 1. Introduction 135
§ 2. Elementary properties 137
§ 3. Compound distributions 145
§ 4. Canonical representation 151
§ 5. Compound-exponential distributions 169
§ 6. Closure properties 175
§ 7. Moments 176
§ 8. Support 182
§ 9. Tail behaviour 189
§10. Log-convexity 201
§11. Examples 208
§12. Notes 218

V. SELF-DECOMPOSABILITY AND STABILITY 221

§ 1. Introduction 221
§ 2. Self-decomposability on the nonnegative reals 224
§ 3. Stability on the nonnegative reals 241
§ 4. Self-decomposability on the nonnegative integers 246
§ 5. Stability on the nonnegative integers 262
§ 6. Self-decomposability on the real line 268
§ 7. Stability on the real line 286
§ 8. Self-decomposability and stability induced by semi-groups 300
§ 9. Examples 308
§10. Notes 325

VI. INFINITE DIVISIBILITY AND MIXTURES 327

§ 1. Introduction 327
§ 2. Two important types of mixtures 329
§ 3. Mixtures of exponential distributions 331
§ 4. Mixtures of gamma distributions 343
§ 5. Generalized gamma convolutions 349
§ 6. Mixtures of Poisson distributions 367
§ 7. Mixtures of negative-binomial distributions 378
§ 8. Generalized negative-binomial convolutions 387
§ 9. Mixtures of zero-mean normal distributions 394
§10. Mixtures of sym-gamma distributions 398
§11. Generalized sym-gamma convolutions 403
§12. Examples 409
§13. Notes 422

VII. INFINITE DIVISIBILITY IN STOCHASTIC PROCESSES 425

§ 1. Introduction 425
§ 2. First-passage times in Markov chains 426
§ 3. Waiting times in queueing processes 431
§ 4. Branching processes 433
§ 5. Renewal processes 439
§ 6. Shot noise 449
§ 7. Examples 450
§ 8. Notes 461

Appendix A. Prerequisites from probability and analysis 465

§ 1. Introduction 465
§ 2. Distributions on the real line 465
§ 3. Distributions on the nonnegative reals 477
§ 4. Distributions on the nonnegative integers 489
§ 5. Other auxiliaries 498
§ 6. Notes 502

Appendix B. Selected well-known distributions 503

§ 1. Introduction 503
§ 2. Distributions on the real line 503
§ 3. Distributions on the nonnegative reals 506
§ 4. Distributions on the nonnegative integers 509
§ 5. Notes 511
