	Preface	vii
	Introduction	1
1	Introduction to the theory of integral equations	13
1.1	Integral equations generated by problems in the theory of ordinary differential equations	13
1.2	Integral equations occurring in the mathematical description of applied problems	21
1.3	Basic problems for integral equations of Volterra type (elementary approach)	30
1.4	Fredholm theory of linear integral equations with square summable kernel	41
1.5	Nonlinear equations of Hammerstein type	56
	Bibliographical notes	61
2	Function spaces, operators, fixed points and monotone mappings	64
2.1	Spaces of continuous functions	64
2.2	Spaces of measurable functions	71
2.3	Operators on function spaces	77
2.4	Fixed point theorems; monotone operators	88
	Bibliographical notes	92
3	Basic theory of Volterra equations: integral and abstract	95
3.1	Continuous solutions for Volterra integral equations	95
3.2	Abstract Volterra equations and some special cases	115
3.3	Linear Volterra equations; the resolvent and some applications	131
3.4	A singular perturbation approach to abstract Volterra equations	140
	Bibliographical notes	148

4	Some special classes of integral and integrodifferential equations	151
4.1	Hammerstein equations and admissibility technique	151
4.2	Some problems related to resolvent kernels and applications	161
4.3	Hammerstein equations on measure spaces	170
4.4	Ultimate behavior of solutions to certain Volterra functional-differential equations	180
4.5	Hammerstein integrodifferential equations and boundary value problems	192
4.6	Periodic and almost periodic solutions to some integrodifferential equations	203
4.7	Integral inclusions of Volterra–Hammerstein type	212
	Bibliographical notes	220
5	Integral equations in abstract spaces	222
5.1	Equations with bounded operators	223
5.2	Equations with unbounded operators in Hilbert spaces	229
5.3	The semigroup method for integrodifferential equations	235
5.4	A nonlinear Volterra equation and the associated semigroup of operators	245
5.5	Global existence for a nonlinear integrodifferential equation in Hilbert space	261
	Bibliographical notes	271
6	Some applications of integral and integrodifferential equations	273
6.1	An integrodifferential equation describing coagulation processes	273
6.2	Optimal control processes governed by Volterra integral equations	284
6.3	Stability of nuclear reactors (A)	298
6.4	Stability of nuclear reactors (B)	324
	Bibliographical notes	333
	References	335
	Index	365
