
CONTENTS

Environmental sampling – Groundwater Sampler Education Volume 3 of 5

Chapter 1	1
Introduction	1
1.1 Groundwater sampling basics	1
1.2 Reasons for sampling	3
1.3 Standards and legislation relating to groundwater sampling	5
Chapter 2	9
Basic knowledge about groundwater	9
2.1 Groundwater terminology	9
2.2 The origin of groundwater and the water cycle	10
2.3 Chemical constituents of groundwater	12
2.4 Geochemical processes in the groundwater	13
2.5 Classification of groundwater	17
2.6 Aquifers and their pressure levels	18
2.7 Aquifer examples	23
Chapter 3	31
Reading and understanding a sampling plan.....	31
3.1 Elements of a groundwater sampling plan	31
3.2 Sampling plans related to water supply systems	34
3.3 Groundwater monitoring	36
3.4 Investigation of contaminated sites	37
3.5 Monitoring wells at landfills	38
Chapter 4	41
Sampling Methods and equipment	41
4.1 Sampling principles	41
4.2 Centrifugal suction pumps	43
4.3 Peristaltic suction pumps	44
4.4 Vacuum air suction pumps	46
4.5 Submerged centrifugal pumps – mains powered	48
4.6 Submerged centrifugal pumps – battery powered	49
4.7 Submerged diaphragm pumps	51
4.8 Montejus pumps	53
4.9 Inertia pumps	55
4.10 Bailers	56
4.11 Equipment for field measurements	58
4.12 Passive sampling	61

Chapter 5	65
Sampling on site	65
5.1 Identifying the sample location	65
5.2 Activities before sampling	66
5.3 Well purging and field measurements	67
5.4 Processes during sampling – filtration and preservation, etc.	68
5.5 Sterile sampling of drinking water	72
Chapter 6	75
Sample handling	75
6.1 Communication with the laboratory	75
6.2 Main dissolved substances (charged ions)	77
6.3 Physical-chemical parameters	78
6.4 Dissolved gasses	78
6.5 Nutrients	79
6.6 Trace metals and other trace elements	80
6.7 Organic compounds groups	80
6.8 Pesticides	81
6.9 Volatile compounds	81
6.10 Oil components	82
Chapter 7	85
Documentation	85
7.1 Sampling location identification	86
7.2 Sample labelling	86
7.3 Field report	87
7.4 Chain of custody report	87
7.5 Sampling report	89
Chapter 8	93
Validation and quality control of sampling	93
8.1 Sampling quality requirements	93
8.2 Preparing for sampling	95
8.3 Sampling validation	95
8.4 Sampling quality control	98
8.5 Evaluation of sampling uncertainty	100
8.6 Expression and reporting of sampling uncertainty	101
Chapter 9	103
Health and safety	103
9.1 Low position of sampling points and oxygen deficit	103
9.2 Handling of heavy equipment	106
9.3 Bursting of pressure hoses	107
9.4 Chemical reagents used during sampling	107
9.5 Risks posed by generators and other energy supply equipment	108
9.6 Other activities at the sampling location	109

9.7	Lack of communication about health and safety	109
Chapter 10	113
Glossary	113
Chapter 11	119
References	119
Appendices	123
A.1	Quality criteria for the main constituents in drinking water	123
A.2	Parameter groups in water analysis	125
