

CONTENTS

<i>Preface</i>	page ix
1 Introduction	1
The scope of this book	1
The four problems	2
Different approaches to studying behaviour	4
Why measure behaviour?	6
Summary	9
2 Think before you measure	10
Choosing the level of analysis	10
Choosing the species	11
Choosing where to study	11
Choosing when to observe	15
Effects of the observer on the subject	17
Anthropomorphism	18
Ethical considerations	20
Summary	23
3 Getting started	25
The steps involved in studying behaviour	25
Preliminary observation	31
Describing behaviour	32
Choosing categories	33
Defining categories	35

Types of measure	36
Events and states	39
The different levels of measurement	40
Summary	41
4 Individuals and groups	42
Identifying individuals	42
Individual differences	44
Assessing individual distinctiveness	45
Defining a group	46
Summary	47
5 Recording methods	48
Sampling rules	48
Recording rules	51
Continuous recording	52
Instantaneous sampling	53
One-zero sampling	54
Choosing the sample interval	55
The disadvantages and advantages of time sampling	57
Summary	60
6 The recording medium	62
The options available	62
Check sheets	65
Event recorders	67
Summary	70
7 How good are your measures?	72
Reliability versus validity	72
Within-observer versus between-observer reliability	74
Measuring reliability using correlations	76
How reliable is reliable?	78
Other ways of measuring reliability	78
Factors affecting reliability	80

Dealing with unreliable measures	81
How independent are the measures?	82
Summary	85
8 How good is your research design?	86
Performing experiments	86
Experimental design	87
Studying development	92
Tests of preference and differential responsiveness	97
Composite measures	100
How much information to collect?	101
Summary	102
9 Statistical analysis	103
General advice on statistics	103
Spreadsheets and databases	104
Exploratory versus confirmatory analysis	105
What statistical tests should be used?	107
Analysis of variance (ANOVA)	109
Correlation	110
Simple regression	112
General linear models (GLMs)	114
Multivariate statistics	115
Circular statistics	118
Did you collect enough data?	119
Summary	119
10 Analysing specific aspects of behaviour	121
Bout length	121
Analysing sequences	122
Analysing rhythms	125
Choice tests	127
Social behaviour	129
Summary	134

11 Interpreting and presenting findings	135
Floor and ceiling effects	135
Assessing significance	136
Problems with correlations	138
Treasuring your exceptions	142
Prior knowledge and Bayes' theorem	143
Modelling	144
Presentation of findings	146
Science and the public interest	150
Summary	151
<i>Appendix 1. Units of measurement</i>	153
<i>Appendix 2. Some statistical terms</i>	156
<i>Appendix 3. Advice on statistics textbooks</i>	160
<i>Appendix 4. Checklist to consult before publication</i>	163
<i>References</i>	165
<i>Index</i>	171
