

Contents

1	Numbers and Algebra	1
1.1	Real Numbers	2
1.2	Algebra	19
2	Functions and Equations: Their Form and Use	29
2.1	Defining Function	30
2.2	Representation of Functions	38
2.3	Some Special Mathematical Functions	46
2.4	Equations	65
3	Limits	77
3.1	Mathematical and Chemical Examples	77
3.2	Defining the Limiting Process	81
4	Differentiation	89
4.1	The Average Rate of Change	90
4.2	The Instantaneous Rate of Change	91
4.3	Higher Order Derivatives	97
4.4	Maxima, Minima and Points of Inflection	102
4.5	The Differentiation of Functions of Two or More Variables	106

5	Differentials	109
5.1	The Effects of Incremental Change	110
5.2	The Differential of a Function of Two or More Variables	114
5.3	The Propagation of Errors	115
6	Integration	119
6.1	Reversing the Effects of Differentiation	120
6.2	The Definite Integral	121
6.3	The Indefinite Integral	125
6.4	General Strategies for Solving More Complicated Integrals	127
6.5	The Connection between the Definite and Indefinite Integral	132
7	Differential Equations	135
7.1	Using the Derivative of a Function to Create a Differential Equation	136
7.2	Some Examples of Differential Equations Arising in Classical and Chemical Contexts	137
7.3	First-order Differential Equations	139
7.4	Second-order Differential Equations	150
	Answers to Problems	159
	Subject Index	181
