## PART I: ALGORITHMS

### 1 Problems and Algorithms

- 1.1 Graph reachability 3
- 1.2 Maximum flow and matching 8
- 1.3 The traveling salesman problem 13
- 1.4 Notes, references, and problems 14

### 2 Turing machines

- 2.1 Turing machine basics 19
- 2.2 Turing machines as algorithms 24
- 2.3 Turing machines with multiple strings 26
- 2.4 Linear speedup 32
- 2.5 Space bounds 34
- 2.6 Random access machines 36
- 2.7 Nondeterministic machines 45
- 2.8 Notes, references, and problems 51

### 3 Computability

- 3.1 Universal Turing machines 57
- 3.2 The halting problem 58
- 3.3 More undecidability 60
- 3.4 Notes, references, and problems 66

<b>PART II: LOGIC</b>	<b>71</b>
<b>4 Boolean logic</b>	<b>73</b>
4.1 Boolean Expressions	
4.2 Satisfiability and validity	76
4.3 Boolean functions and circuits	79
4.4 Notes, references, and problems	84
<b>5 First-order logic</b>	<b>87</b>
5.1 The syntax of first-order logic	87
5.2 Models	90
5.3 Valid expressions	95
5.4 Axioms and proofs	100
5.5 The completeness theorem	105
5.6 Consequences of the completeness theorem	110
5.7 Second-order logic	113
5.8 Notes, references, and problems	118
<b>6 Undecidability in logic</b>	<b>123</b>
6.1 Axioms for number theory	123
6.2 Complexity as a number-theoretic concept	127
6.3 Undecidability and incompleteness	131
6.4 Notes, references, and problems	135
<b>PART III: P AND NP</b>	<b>137</b>
<b>7 Relations between complexity classes</b>	<b>139</b>
7.1 Complexity classes	139
7.2 The hierarchy theorem	143
7.3 The reachability method	146
7.4 Notes, references, and problems	154
<b>8 Reductions and completeness</b>	<b>159</b>
8.1 Reductions	159
8.2 Completeness	165

8.3	Logical characterizations	172	
8.4	Notes, references, and problems	177	
<b>9</b>	<b>NP-complete problems</b>		<b>181</b>
9.1	Problems in NP	181	
9.2	Variants of satisfiability	183	
9.3	Graph-theoretic problems	188	
9.4	Sets and numbers	199	
9.5	Notes, references, and problems	207	
<b>10</b>	<b>coNP and function problems</b>		<b>219</b>
10.1	NP and coNP	219	
10.2	Primality	222	
10.3	Function problems	227	
10.4	Notes, references, and problems	235	
<b>11</b>	<b>Randomized computation</b>		<b>241</b>
11.1	Randomized algorithms	241	
11.2	Randomized complexity classes	253	
11.3	Random sources	259	
11.4	Circuit complexity	267	
11.5	Notes, references, and problems	272	
<b>12</b>	<b>Cryptography</b>		<b>279</b>
12.1	One-way functions	279	
12.2	Protocols	287	
12.3	Notes, references, and problems	294	
<b>13</b>	<b>Approximability</b>		<b>299</b>
13.1	Approximation algorithms	299	
13.2	Approximation and complexity	309	
13.3	Nonapproximability	319	
13.4	Notes, references, and problems	323	

<b>14</b>	<b>On P vs. NP</b>	<b>329</b>
14.1	The map of NP	329
14.2	Isomorphism and density	332
14.3	Oracles	339
14.4	Monotone circuits	343
14.5	Notes, references, and problems	350
<b>PART IV: INSIDE P</b>		<b>357</b>
<b>15</b>	<b>Parallel computation</b>	<b>359</b>
15.1	Parallel algorithms	359
15.2	Parallel models of computation	369
15.3	The class NC	375
15.4	RNC algorithms	381
15.5	Notes, references, and problems	385
<b>16</b>	<b>Logarithmic space</b>	<b>395</b>
16.1	The $L \stackrel{?}{=} NL$ problem	395
16.2	Alternation	399
16.3	Undirected reachability	401
16.4	Notes, references, and problems	405
<b>PART V: BEYOND NP</b>		<b>409</b>
<b>17</b>	<b>The polynomial hierarchy</b>	<b>411</b>
17.1	Optimization problems	411
17.2	The hierarchy	424
17.3	Notes, references, and problems	433
<b>18</b>	<b>Computation that counts</b>	<b>439</b>
18.1	The permanent	439
18.2	The class $\oplus P$	447
18.3	Notes, references, and problems	452

<b>19</b>	<b>Polynomial space</b>	<b>455</b>
19.1	Alternation and games	455
19.2	Games against nature and interactive protocols	469
19.3	More <b>PSPACE</b> -complete problems	480
19.4	Notes, references, and problems	487
<b>20</b>	<b>A glimpse beyond</b>	<b>491</b>
20.1	Exponential time	491
20.2	Notes, references, and problems	499
	<b>Index</b>	<b>509</b>
	<b>Author index</b>	<b>519</b>
