

## Table of Contents

I.	Multistep Multiderivative Methods for Differential Systems of First Order . . . . .	1
1.1.	Consistence . . . . .	1
1.2.	Uniform Stability . . . . .	6
1.3.	General Properties of the Region $S$ of Absolute Stability . . . . .	11
1.4.	Indirect Methods for Differential Systems of Second Order . . . . .	15
1.5.	Diagonal Padé Approximants of the Exponential Function . . . . .	20
1.6.	Stability in the Left Half-Plane . . . . .	23
1.7.	Stability on the Imaginary Axis . . . . .	30
II.	Direct Multistep Multiderivative Methods for Differential Systems of Second Order . . . . .	34
2.1.	Multistep Methods for Conservative Differential Systems . . . . .	34
2.2.	Linear Multistep Methods for Differential Systems with Damping . . . . .	45
2.3.	Linear Multistep Methods for Differential Systems with Orthogonal Damping . . . . .	55
2.4.	Nyström Type Methods for Conservative Differential Systems . . . . .	59
2.5.	Stability on the Negative Real Line . . . . .	66
2.6.	Examples of Linear Multistep Methods . . . . .	69
III.	Linear Multistep Methods and Problems with Leading Matrix $A(t) = a(t)A$ . . . . .	72
3.1.	Differential Systems of First Order and Methods with Diagonable Frobenius Matrix . . . . .	72
3.2.	Differential Systems of First Order and Methods with Non-Empty $\overset{\circ}{S}$ . . . . .	75
3.3.	An Error Bound for Differential Systems of Second Order . . . . .	82
IV.	Linear Multistep Methods and Nonlinear Differential Systems of First Order . . . . .	88
4.1.	An Error Bound for Stable Differential Systems . . . . .	88
4.2.	The Modified Midpoint Rule . . . . .	92
4.3.	G-Stability and A-Stability . . . . .	96
4.4.	Uniform Stability under Stronger Assumptions on the Differential Systems . . . . .	106
V.	Runge-Kutta Methods for Differential Systems of First Order . . . . .	114
5.1.	General Multistage Methods and Runge-Kutta Methods . . . . .	114
5.2.	Consistence . . . . .	117
5.3.	Error Bounds for Stable Differential Systems . . . . .	126
5.4.	Examples and Remarks . . . . .	136

VI. Approximation of Initial Boundary Value Problems . . . . .	142
6.1. Initial Boundary Value Problems and Galerkin Procedures . . . . .	142
6.2. Error Estimates for Galerkin-Multistep Procedures and Parabolic Problems .	146
6.3. Error Estimates for Galerkin-Multistep Procedures and Hyperbolic Problems.	150
Appendix . . . . .	157
A.1. Auxiliary Results on Algebraic Functions . . . . .	157
A.2. Auxiliary Results on Frobenius and Vandermonde Matrices . . . . .	173
A.3. A Uniform Boundedness Theorem . . . . .	177
A.4. Examples to Chapters I and IV . . . . .	181
A.5. Examples of Nyström Methods . . . . .	188
A.6. The (2,2)-Method for Systems of Second Order . . . . .	194
References . . . . .	196
Glossary of Symbols . . . . .	200
Subject Index . . . . .	201
