I The Problem of Formulating an Axiomatics for Quantum Mechanics	1
§ 1 Is There an Axiomatic Basis for Quantum Mechanics?	1
§ 2 Concepts Unsuitable in a Basis for Quantum Mechanics	2
§ 3 Experimental Situations Describable Solely by Pretheories	3
§ 4 Mathematical Problems	5
§ 5 Progress to More Comprehensive Theories	6
II Pretheories for Quantum Mechanics	8
§ 1 State Space and Trajectory Space	8
§ 2 Preparation and Registration Procedures	17
§ 2.1 Statistical Selection Procedures	17
§ 2.2 Preparation Procedures	20
§ 2.3 Registration Procedures	21
§ 2.4 Dependence of Registration on Preparation	23
§ 3 Trajectory Preparation and Registration Procedures	26
§ 3.1 Trajectory Effects	26
§ 3.2 Trajectory Ensembles	30
§ 3.3 The Dynamic Laws and the Objectivating Manner of Description	32
§ 3.4 Dynamically Continuous Systems	35
§ 4 Transformations of Preparation and Registration Procedures	37
§ 4.1 Time Translations of the Trajectory Registration Procedures	37
§ 4.2 Time Translations of the Preparation Procedures	40
§ 4.3 Further Transformations of Preparation and Registration Procedures	42
§ 5 The Macrosystems as Physical Objects	43
III Base Sets and Fundamental Structure Terms for a Theory of Microsystems	47
§ 1 Composite Microsystems	47
§ 2 Preparation and Registration Procedures for Composite Microsystems	50
§ 3 Directed Interactions	59
§ 4 Action Carriers	68
§ 5 Ensembles and Effects	74
§ 5.1 The Problem of Combining Preparation and Registration Procedures	74

§ 5.2	Physical Systems	79
§ 5.3	Mixing and De-mixing of Ensembles and Effects	81
§ 5.4	Re-elimination of the Action Carrier	85
§ 6	Objectivating Method of Describing Experiments	86
§ 6.1	The Method of Describing Composite Macrosystems in the Trajectory Space	87
§ 6.2	Trajectory Effects of the Composite Systems	87
§ 6.3	Trajectory Ensembles of the Composite Systems	89
§ 6.4	The Structure of the Trajectory Measures for Directed Action	92
§ 6.5	Complete Description by Trajectories	94
§ 6.6	Use of the Interaction for the Registration of Macrosystems	97
§ 6.7	The Relation Between the Two Forms of an Axiomatic Basis	98
§ 7	Transport of Systems Relative to Each Other	99
IV	Embedding of Ensembles and Effect Sets in Topological Vector Spaces	101
§ 1	Embedding of \mathcal{H}, \mathcal{L} in a Dual Pair of Vector Spaces	101
§ 2	Uniform Structures of the Physical Imprecision on \mathcal{H} and \mathcal{L}	103
§ 3	Embedding of \mathcal{H} and \mathcal{L} in Topologically Complete Vector Spaces	104
§ 4	$\mathcal{B}, \mathcal{B}', \mathcal{D}, \mathcal{D}'$ Considered as Ordered Vector Spaces	114
§ 5	The Faces of K and L	119
§ 6	Some Convergence Theorems	123
V	Observables and Preparators	126
§ 1	Coexistent Effects and Observables	126
§ 1.1	Coexistent Registrations	126
§ 1.2	Coexistent Effects	127
§ 1.3	Observables	128
§ 2	Mixture Morphisms	129
§ 3	Structures in the Class of Observables	131
§ 3.1	The Spaces $\mathcal{B}(\Sigma)$ and $\mathcal{B}'(\Sigma)$ Assigned to a Boolean Ring Σ	131
§ 3.2	Mixture Morphism Corresponding to an Observable	132
§ 3.3	The Kernel of an Observable	132
§ 3.4	De-mixing of Observables	134
§ 3.5	Measurement Scales of Observables and Totally Ordered Subsets of L	136
§ 4	Coexistent and Complementary Observables	137
§ 5	Realization of Observables	137
§ 6	Coexistent De-mixing of Ensembles	140
§ 7	Complementary De-mixings of Ensembles	143
§ 8	Realizations of De-mixings	145
§ 9	Preparators and Faces of K	146
§ 10	Physical Objects as Action Carriers	148
§ 11	Operations and Transpreparators	150

VI Main Laws of Preparation and Registration	152
§ 1 Main Laws for the Increase in Sensitivity of Registrations	153
§ 1.1 Increase in Sensitivity Relative to Two Effect Procedures	153
§ 1.2 Some Experimental and Intuitive Indications for the Law of Increase in Sensitivity	156
§ 1.3 Decision Effects	159
§ 1.4 The Increase in Sensitivity of an Effect	162
§ 2 Relations Between Preparation and Registration Procedures	164
§ 2.1 Main Law for the De-mixing of Ensembles and Related Possibilities of Registering	164
§ 2.2 Some Consequences of Axiom AV2	166
§ 3 The Lattice G	167
§ 4 Commensurable Decision Effects	172
§ 5 The Orthomodularity of G	174
§ 6 The Main Law for Not Coexistent Registrations	176
§ 6.1 Experimental Hints for Formulating the Main Law for Not Coexistent Registrations	176
§ 6.2 Some Important Equivalences	180
§ 6.3 Formulation of the Main Law and Some Consequences	182
§ 7 The Main Law of Quantization	184
§ 7.1 Intuitive Indications for Formulating the Main Law of Quantization	184
§ 7.2 Simple Consequences of the Main Law of Quantization	186
VII Decision Observables and the Center	187
§ 1 The Commutator of a Set of Decision Effects	187
§ 2 Decision Observables	188
§ 3 Structures in That Class of Observables Whose Range also Contains Elements of G	189
§ 4 Commensurable Decision Observables	190
§ 5 Decomposition of \mathcal{B} and \mathcal{B}' Relative to the Center Z	190
§ 5.1 Reduction of the Elements of \mathcal{B}' by the Elements of G	191
§ 5.2 Reduction by Center Elements	193
§ 5.3 Classical Systems	199
§ 5.4 Decomposition into Irreducible Parts	202
§ 6 System Types and Super Selection Rules	205
VIII Representation of $\mathcal{B}, \mathcal{B}'$ by Banach Spaces of Operators in a Hilbert Space	208
§ 1 The Finite Elements of G	208
§ 2 The General Representation Theorem for Irreducible G	210
§ 3 Some Topological Properties of G	212
§ 4 The Representation Theorem for K, L	215
§ 4.1 The Representation Theorem for G	215
§ 4.2 The Ensembles and Effects	217

§ 4.3 Coexistence, Commensurability, Uncertainty Relations,
and Commutability of Operators 221

§ 5 Some Theorems for Finite-dimensional and Irreducible \mathcal{B} 223

Appendix 227

A I Some Theorems for Atoms in the Lattice G 227

A II Banach Lattices 229

A III The Axiom A_{vid} and the Minimal Decomposition Property 230

A IV The Bishop-Phelps Theorem and the Ellis Theorem 231

Bibliography 235

List of Frequently Used Symbols 239

List of Axioms 241

Index 242

Contents of Vol. 2:

Quantum Mechanics and Macrosystems

IX Further Structures of Preparation and Registration

X The Embedding Problem

XI Compatibility of \mathcal{PT}_q with $\mathcal{PT}_{q\text{exp}}$

XII Special Structures in Preparation and Registration Devices

XIII Relations Between Different Forms of Quantum Mechanics
and the Reality Problem
