# Contents

|  |     |
|--|-----|
| Preface  | ix  |
| Introduction   | 1   |
| Orbitals and Bands in One Dimension  | 3   |
| Bloch Functions, $k$ , Band Structures   | 5   |
| Band Width   | 7   |
| See How They Run   | 9   |
| An Eclipsed Stack of Pt(II) Square Planar Complexes                                      | 10  |
| The Fermi Level  | 15  |
| More Dimensions, At Least Two  | 16  |
| Setting Up a Surface Problem   | 21  |
| Density of States  | 26  |
| Where Are The Electrons?   | 32  |
| The Detective Work of Tracing Molecule-Surface Interactions:<br>Decomposition of the DOS | 36  |
| Where Are the Bonds?   | 42  |
| A Solid State Sample Problem: $\text{ThCr}_2\text{Si}_2$ Structure                       | 55  |
| The Frontier Orbital Perspective   | 65  |
| Orbital Interaction on a Surface   | 68  |
| A Case Study: CO on Ni(100)  | 71  |
| Barriers to Chemisorption  | 74  |
| Chemisorption Is a Compromise  | 75  |
| Frontiers Orbitals in Three-Dimensional Extended Structures                              | 78  |
| More Than One Electronic Unit in the Unit Cell, Folding Bands                            | 83  |
| Making Bonds in a Crystal  | 90  |
| The Peierls Distortion   | 92  |
| A Brief Excursion into the Third Dimension   | 102 |
| Qualitative Reasoning About Orbital Interactions on Surfaces                             | 107 |
| The Fermi Level Matters  | 111 |
| Another Methodology and Some Credits   | 117 |
| What's New in the Solid  | 121 |
| REFERENCES   | 131 |
| INDEX  | 139 |
