What is physics?	4
Asking questions	6
Physics is everywhere	8
What do physicists do?	10

## **Chapter 1: Forces & motion** 15

What makes things move, what makes things stop, and why some things move faster and easier than others.

## **Chapter 2: Waves** 29

How sounds travel, how light works, and the mysterious connection between electricity and magnetism.

## **Chapter 3: The speed of light and the shape of the universe** 43

Albert Einstein came up with two of the most significant theories in modern physics: **special relativity**, which explores the speed of light, and **general relativity**, which unpacks the shape of the universe. But what actually ARE these theories?

## **Chapter 4: Nuclear and particle physics** 57

Introducing the very smallest things physicists have discovered, and seeing what happens when they try to break those things apart into even smaller pieces.

## Chapter 5: Quantum mechanics

75

The smallest particles don't seem to follow the same rules as bigger things. So what rules *do* they follow, and why don't they seem to make sense?

## Chapter 6: Space

93

What is out there, beyond the Earth? And where exactly did it all come from?

## Chapter 7: Unsolved mysteries

107

There are plenty of things physicists don't understand about how things work, whether on Earth or out in space. Discover some of the mysteries that **YOU** might help to solve one day.
