

Contents

Contributors	vii
Preface	ix

1. Introduction	1
-----------------	---

Part 1: Basics of Shape Data

2. Landmarks and Semilandmarks	23
3. Simple Size and Shape Variables: Shape Coordinates	51
4. Theory of Shape	75
5. The Thin-plate Spline: Visualizing Shape Change as a Deformation	103

Part 2: Analyzing Shape Variables

6. Ordination Methods	135
7. Partial Least Squares Analysis	169
8. Statistics	189
9. General Linear Models	225

Part 3: Applications

10. Ecological and Evolutionary Morphology	263
11. Evolutionary Developmental Biology (1): The Evolution of Ontogeny	297

12. Evolutionary Developmental Biology (2): Variational Properties 353

13. Morphometrics and Systematics 399

14. Forensic Applications of Geometric Morphometrics 419

Bibliography 435

Glossary 455
