Contents

1 Basic algebra and arithmetic 1

1.1 Elementary arithmetic 1
1.2 Powers, roots, and logarithms 1
1.3 Quadratic equations 3
1.4 Simultaneous equations 4
1.5 The binomial expansion 4
1.6 Arithmetic and geometric progressions 5
1.7 Partial fractions 6
1.8 Worked examples 7

2 Curves and graphs 13

2.1 Straight lines 13
2.2 Parabolas 13
2.3 Polynomials 14
2.4 Powers, roots, and logarithms 15
2.5 Circles 16
2.6 Ellipses 16
2.7 Worked examples 17

3 Trigonometry 21

3.1 Angles and circular measure 21
3.2 Sines, cosines, and tangents 21
3.3 Pythagorean identities 23
3.4 Compound angles 23
3.5 Factor formulae 24
3.6 Inverse trigonometric functions 24
3.7 The sine and cosine rules 25
3.8 Worked examples 25

4 Differentiation 29

4.1 Gradients and derivatives 29
4.2 Some basic properties of derivatives 30
4.3 Exponentials and logarithms 32
4.4 Products and quotients 32
4.5 Functions of functions 33
4.6 Maxima and minima 34
4.7 Implicit and logarithmic differentiation 36

4.8 Worked examples 36

5 Integration 43

5.1 Areas and integrals 43
5.2 Integrals and derivatives 44
5.3 Some basic properties of integrals 45
5.4 Inspection and substitution 46
5.5 Partial fractions 47
5.6 Integration by parts 48
5.7 Reduction formulae 48
5.8 Symmetry, tables, and numerical integration 49
5.9 Worked examples 50

6 Taylor series 57

6.1 Approximating functions 57
6.2 Derivation of the Taylor series 57
6.3 Some common examples 58
6.4 The radius of convergence 59
6.5 l'Hôpital's rule 59
6.6 Newton-Raphson algorithm 60
6.7 Worked examples 60

7 Complex numbers 65

7.1 Definition 65
7.2 Basic algebra 65
7.3 The Argand diagram 66
7.4 The imaginary exponential 67
7.5 Roots and logarithms 68
7.6 De Moivre's theorem and trigonometry 69
7.7 Hyperbolic functions 70
7.8 Some useful properties 71
7.9 Worked examples 72

8 Vectors 79

8.1 Definition and Cartesian coordinates 79
8.2 Addition, subtraction, and scalar multiplication 80
8.3 Scalar product 81
8.4 Vector product 82
8.5 Scalar triple product 83
8.6 Vector triple product 84
8.7 Polar coordinates 84
8.8 Worked examples 85

9 Matrices 91
9.1 Definition and nomenclature 91
9.2 Matrix arithmetic 92
9.3 Determinants 93
9.4 Inverse matrices 94
9.5 Linear simultaneous equations 94
9.6 Transformations 95
9.7 Eigenvalues and eigenvectors 96
9.8 Diagonalization 97
9.9 Worked examples 98

10 Partial differentiation 105
10.1 Definition and the gradient vector 105
10.2 Second and higher derivatives 106
10.3 Increments and chain rules 107
10.4 Taylor series 109
10.5 Maxima and minima 109
10.6 Constrained optimization 111
10.7 Worked examples 112

11 Line integrals 119
11.1 Line integrals 119
11.2 Exact differentials 120
11.3 Worked examples 121

12 Multiple integrals 125
12.1 Physical examples 125
12.2 The order of integration 126
12.3 Choice of coordinates 127
12.4 Worked examples 129

13 Ordinary differential equations 133
13.1 Definition of terms 133
13.2 First-order: separable 133
13.3 First-order: homogeneous 134
13.4 First-order: integrating factor 135
13.5 Second-order: homogeneous 136
13.6 Second-order: inhomogeneous 138
13.7 Worked examples 139

14 Partial differential equations 147
14.1 Elementary cases 147

14.2 Separation of variables 148
14.3 Common physical examples 151
14.4 Worked examples 152

15 Fourier series and transforms 157
15.1 Approximating periodic functions 157
15.2 Taylor versus Fourier series 158
15.3 Complex Fourier series 158
15.4 Fourier integral 158
15.5 Some formal properties 160
15.6 Physical examples and insight 161
15.7 Worked examples 162

16 Data analysis 169
16.1 Introduction 169
16.2 Inference: the basic rules 170
16.3 Common probability distributions 172
16.4 Parameter estimation 174
16.5 Propagation of errors 178
16.6 Model comparison 179
16.7 Concluding remarks 179
16.8 Worked examples 180
