Brief Contents

1 Drugs and drug targets: an overview	1	3 Enzymes: structure and function	29
1.1 What is a drug?	1	3.1 Enzymes as catalysts	29
1.2 Drug targets	3	3.2 How do enzymes catalyse reactions?	30
1.2.1 Cell structure	3	3.3 The active site of an enzyme	30
1.2.2 Drug targets at the molecular level	4	3.4 Substrate binding at an active site	30
1.3 Intermolecular bonding forces	5	3.5 The catalytic role of enzymes	31
1.3.1 Electrostatic or ionic bonds	5	3.5.1 Binding interactions	31
1.3.2 Hydrogen bonds	5	3.5.2 Acid/base catalysis	32
1.3.2.1 Conventional hydrogen bonds	5	3.5.3 Nucleophilic groups	32
1.3.2.2 Unconventional hydrogen bonds	7	3.5.4 Stabilization of the transition state	33
1.3.3 Van der Waals interactions	8	3.5.5 Cofactors	34
1.3.4 Dipole-dipole, ion-dipole, and cation- π interactions	8	3.5.6 Naming and classification of enzymes	35
1.3.5 π - π interactions	9	3.5.7 Genetic polymorphism and enzymes	35
1.3.6 Halogen bonds	10	3.6 Regulation of enzymes	36
1.3.7 Repulsive interactions	10	3.7 Isozymes	37
1.3.8 The role of water and hydrophobic interactions	11	3.8 Enzyme kinetics	39
1.4 Pharmacokinetic issues and medicines	11	3.8.1 The Michaelis-Menten equation	39
1.5 Classification of drugs	12	3.8.2 Lineweaver-Burk plots	40
1.5.1 By pharmacological effect	12	Box 3.1 The external control of enzymes by nitric oxide	38
1.5.2 By chemical structure	12		
1.5.3 By target system	12	4 Receptors: structure and function	42
1.5.4 By target molecule	12	4.1 Role of the receptor	42
1.6 Naming of drugs and medicines	13	4.2 Neurotransmitters and hormones	42
		4.3 Receptor types and subtypes	44
		4.4 Receptor activation	45
		4.5 How does the binding site change shape?	45
		4.6 Ion channel receptors	46
		4.6.1 General principles	46
		4.6.2 Structure	47
		4.6.3 Gating	48
		4.6.4 Ligand-gated and voltage-gated ion channels	49
		4.7 G-Protein-coupled receptors	49
		4.7.1 General principles	49
		4.7.2 Structure of G-protein-coupled receptors	50
		4.7.3 The rhodopsin-like family of G-protein-coupled receptors	50
		4.7.4 Dimerization of G-coupled receptors	52
		4.8 Kinase receptors	52
		4.8.1 General principles	52
		4.8.2 Structure of tyrosine kinase receptors	53
		4.8.3 Activation mechanism for tyrosine kinase receptors	53
		4.8.4 Tyrosine kinase receptors as targets in drug discovery	54
		4.8.4.1 The ErbB family of tyrosine kinase receptors	54
		4.8.4.2 Vascular endothelial growth factor receptors	54
		4.8.4.3 Platelet-derived growth factor receptors	54
		4.8.4.4 Stem cell growth factor receptors	54
		4.8.4.5 Anaplastic lymphoma kinase	55
		4.8.4.6 The RET receptor	55
		4.8.4.7 Hepatocyte growth factor receptor or c-MET receptor	55

4.9 Intracellular receptors	55
4.10 Regulation of receptor activity	56
4.11 Genetic polymorphism and receptors	56
5 Receptors and signal transduction	58
5.1 Signal transduction pathways for G-protein-coupled receptors (GPCRs)	58
5.1.1 Interaction of the receptor-ligand complex with G-proteins	58
5.1.2 Signal transduction pathways involving the α -subunit	58
5.2 Signal transduction involving G-proteins and adenylate cyclase	60
5.2.1 Activation of adenylate cyclase by the α_s -subunit	60
5.2.2 Activation of protein kinase A	60
5.2.3 The G_i -protein	61
5.2.4 General points about the signalling cascade involving cyclic AMP	62
5.2.5 The role of the $\beta\gamma$ -dimer	63
5.2.6 Phosphorylation	63
5.3 Signal transduction involving G-proteins and phospholipase C β	64
5.3.1 G-Protein effect on phospholipase C β	64
5.3.2 Action of the secondary messenger: diacylglycerol	64
5.3.3 Action of the secondary messenger: inositol triphosphate	65
5.3.4 Resynthesis of phosphatidylinositol diphosphate	65
5.4 The role of β -arrestins in modulating the activity of G-protein-coupled receptors	66
5.5 Signal transduction involving kinase receptors	67
5.5.1 Activation of signalling proteins and enzymes	67
5.5.2 The MAPK signal transduction pathway	67
5.5.3 Activation of guanylate cyclase by kinase receptors	69
5.5.4 The JAK-STAT signal transduction pathway	69
5.5.5 The PI3K/Akt/mTOR signal transduction pathway	70
5.6 The hedgehog signalling pathway	71
6 Nucleic acids: structure and function	73
6.1 Structure of DNA	73
6.1.1 The primary structure of DNA	73
6.1.2 The secondary structure of DNA	73
6.1.3 The tertiary structure of DNA	74
6.1.4 Chromatins	76
6.1.5 Genetic polymorphism and personalized medicine	77
6.2 Ribonucleic acid and protein synthesis	78
6.2.1 Structure of RNA	78
6.2.2 Transcription and translation	78
6.2.3 Small nuclear RNA	79
6.2.4 The regulatory role of RNA	81
6.3 Genetic illnesses	81
6.4 Molecular biology and genetic engineering	82

Part B Pharmacodynamics and pharmacokinetics

7 Enzymes as drug targets	89
7.1 Inhibitors acting at the active site of an enzyme	89
7.1.1 Reversible inhibitors	89
7.1.2 Irreversible inhibitors	90
7.2 Inhibitors acting at allosteric binding sites	92
7.3 Uncompetitive and non-competitive inhibitors	92
7.4 Transition-state analogues: renin inhibitors	92
7.5 Suicide substrates	93
7.6 Isozyme selectivity of inhibitors	95
7.7 Medicinal uses of enzyme inhibitors	96
7.7.1 Enzyme inhibitors used against microorganisms	96
7.7.2 Enzyme inhibitors used against viruses	97
7.7.3 Enzyme inhibitors used against the body's own enzymes	97
7.7.4 Enzyme modulators	98
7.8 Enzyme kinetics	99
7.8.1 Lineweaver-Burk plots	99
7.8.2 Comparison of inhibitors	101
Box 7.1 A cure for antifreeze poisoning	90
Box 7.2 Irreversible inhibition for the treatment of obesity	91
Box 7.3 Suicide substrates	95
Box 7.4 Designing drugs to be isozyme selective	96
Box 7.5 Action of toxins on enzymes	98
Box 7.6 Kinase inhibitors	99
8 Receptors as drug targets	103
8.1 Introduction	103
8.2 The design of agonists	103
8.2.1 Binding groups	103
8.2.2 Position of the binding groups	104
8.2.3 Size and shape	105
8.2.4 Other design strategies	106
8.2.5 Pharmacodynamics and pharmacokinetics	107
8.2.6 Examples of agonists	107
8.2.7 Allosteric modulators	107
8.3 The design of antagonists	107
8.3.1 Antagonists acting at the binding site	107
8.3.2 Antagonists acting outside the binding site	110
8.4 Partial agonists	111
8.5 Inverse agonists	112
8.6 Desensitization and sensitization	112
8.7 Tolerance and dependence	114
8.8 Receptor types and subtypes	114
8.9 Affinity, efficacy, and potency	116
Box 8.1 An unexpected agonist	106
Box 8.2 Estradiol and the estrogen receptor	109

9 Nucleic acids as drug targets	120	11.4.6 Placental barrier	155
9.1 Intercalating drugs acting on DNA	120	11.4.7 Drug–drug interactions	156
9.2 Topoisomerase poisons: non-intercalating	122	11.5 Drug metabolism	156
9.3 Alkylating and metallating agents	123	11.5.1 Phase I and phase II metabolism	156
9.3.1 Nitrogen mustards	124	11.5.2 Phase I transformations catalysed by cytochrome P450 enzymes	157
9.3.2 Nitrosoureas	124	11.5.3 Phase I transformations catalysed by flavin-containing monooxygenases	158
9.3.3 Busulfan	124	11.5.4 Phase I transformations catalysed by other enzymes	158
9.3.4 Cisplatin	124	11.5.5 Phase II transformations	160
9.3.5 Dacarbazine and procarbazine	124	11.5.6 Metabolic stability	161
9.3.6 Mitomycin C	126	11.5.7 The first pass effect	165
9.4 Chain cutters	127	11.6 Drug excretion	165
9.5 Chain terminators	127	11.7 Drug administration	166
9.6 Control of gene transcription	130	11.7.1 Oral administration	166
9.7 Agents that act on RNA	131	11.7.2 Absorption through mucous membranes	166
9.7.1 Agents that bind to ribosomes	131	11.7.3 Rectal administration	167
9.7.2 Antisense therapy	131	11.7.4 Topical administration	167
10 Miscellaneous drug targets	134	11.7.5 Inhalation	167
10.1 Transport proteins as drug targets	134	11.7.6 Injection	167
10.2 Structural proteins as drug targets	134	11.7.7 Implants	168
10.2.1 Viral structural proteins as drug targets	134	11.8 Drug dosing	168
10.2.2 Tubulin as a drug target	134	11.8.1 Drug half-life	169
10.2.2.1 Agents that inhibit tubulin polymerization	135	11.8.2 Steady state concentration	169
10.2.2.2 Agents that inhibit tubulin depolymerization	135	11.8.3 Drug tolerance	170
10.3 Biosynthetic building blocks as drug targets	137	11.8.4 Bioavailability	170
10.4 Biosynthetic processes as drug targets: chain terminators	137	11.9 Formulation	170
10.5 Protein–protein interactions	138	11.10 Drug delivery	171
10.5.1 Inhibition of protein–protein interactions	138	Box 11.1 Metabolism of an antiviral agent	162
10.5.2 Promotion of protein–protein interactions	141	■ Case study 1 Statins	175
10.6 Lipids as a drug target	143		
10.6.1 ‘Tunnelling molecules’	143		
10.6.2 Ion carriers	145		
10.6.3 Tethers and anchors	147		
10.7 Carbohydrates as drug targets	147		
10.7.1 Glycomics	147	Part C Drug discovery, design, and development	
10.7.2 Antigens and antibodies	148		
10.7.3 Cyclodextrins	149	Drug discovery, design, and development: the past	183
Box 10.1 Antidepressant drugs acting on transport proteins	135	Drug discovery, design, and development: the present	183
Box 10.2 Targeting transcription factor-coactivator interactions	138		
Box 10.3 Cyclodextrins as drug scavengers	149	12 Drug discovery: finding a lead	185
11 Pharmacokinetics and related topics	152	12.1 Choosing a disease	185
11.1 The three phases of drug action	152	12.2 Choosing a drug target	185
11.2 A typical journey for an orally active drug	152	12.2.1 Drug targets	185
11.3 Drug absorption	152	12.2.2 Discovering drug targets	185
11.4 Drug distribution	154	12.2.3 Target specificity and selectivity between species	186
11.4.1 Distribution round the blood supply	154	12.2.4 Target specificity and selectivity within the body	187
11.4.2 Distribution to tissues	155	12.2.5 Targeting drugs to specific organs and tissues	187
11.4.3 Distribution to cells	155	12.2.6 Pitfalls	187
11.4.4 Other distribution factors	155	12.2.7 Multi-target drugs	188
11.4.5 Blood–brain barrier	155	12.3 Identifying a bioassay	190
		12.3.1 Choice of bioassay	190
		12.3.2 <i>In vitro</i> tests	190
		12.3.3 <i>In vivo</i> tests	190
		12.3.4 Test validity	191
		12.3.5 High-throughput screening	191

12.3.6 Screening by NMR	191	13.1.9 Binding role of esters	215
12.3.7 Affinity screening	192	13.1.10 Binding role of alkyl and aryl halides	215
12.3.8 Surface plasmon resonance	192	13.1.11 Binding role of thiols and ethers	216
12.3.9 Scintillation proximity assay	193	13.1.12 Binding role of phosphates, phosphonates, and phosphinates	216
12.3.10 Isothermal titration calorimetry	193	13.1.13 Binding role of other functional groups	217
12.3.11 Virtual screening	193	13.1.14 Binding role of alkyl groups and the carbon skeleton	217
12.4 Finding a lead compound	193	13.1.15 Binding role of heterocycles	217
12.4.1 Screening of natural products	194	13.1.16 Isosteres	218
12.4.1.1 The plant kingdom	194	13.1.17 Testing procedures	219
12.4.1.2 Microorganisms	194	13.1.18 SAR in drug optimization	220
12.4.1.3 Marine sources	195	13.2 Identification of a pharmacophore	220
12.4.1.4 Animal sources	195	13.3 Drug optimization: strategies in drug design	221
12.4.1.5 Venoms and toxins	195	13.3.1 Variation of substituents	221
12.4.2 Medical folklore	196	13.3.1.1 Alkyl substituents	221
12.4.3 Screening synthetic compound 'libraries'	196	13.3.1.2 Substituents on aromatic or heteroaromatic rings	223
12.4.4 Existing drugs	197	13.3.1.3 Varying substituents to change the pK _a of ionizable groups	224
12.4.4.1 'Me too' and 'me better' drugs	197	13.3.1.4 Synergistic effects	224
12.4.4.2 Enhancing a side effect	197	13.3.2 Extension of the structure	224
12.4.5 Starting from the natural ligand or modulator	198	13.3.3 Chain extension/contraction	226
12.4.5.1 Natural ligands for receptors	198	13.3.4 Ring expansion/contraction	226
12.4.5.2 Natural substrates for enzymes	199	13.3.5 Ring variations	227
12.4.5.3 Enzyme products as lead compounds	200	13.3.6 Ring fusions	228
12.4.5.4 Natural modulators as lead compounds	200	13.3.7 Isosteres and bio-isosteres	228
12.4.6 Combinatorial and parallel synthesis	200	13.3.8 Simplification of the structure	229
12.4.7 Computer-aided design of lead compounds	200	13.3.9 Rigidification of the structure	231
12.4.8 Serendipity and the prepared mind	200	13.3.10 Conformational blockers	233
12.4.9 Computerized searching of structural databases	202	13.3.11 Rigidification through intramolecular bonds	234
12.4.10 Fragment-based lead discovery	202	13.3.12 Structure-based drug design and molecular modelling	235
12.4.11 Properties of lead compounds	204	13.3.13 Drug design by NMR spectroscopy	235
12.5 Isolation and purification	206	13.3.14 The elements of luck and inspiration	235
12.6 Structure determination	206	13.3.15 Designing drugs to interact with more than one target	236
12.7 Herbal medicine	206	13.3.15.1 Agents designed from known drugs	237
Box 12.1 Recently discovered targets: the caspases	186	13.3.15.2 Agents designed from non-selective lead compounds	237
Box 12.2 Pitfalls in choosing particular targets	188	13.4 Selectivity	237
Box 12.3 Early tests for potential toxicity	189	13.5 Pharmacokinetics	238
Box 12.4 Selective optimization of side activities (SOSA)	199	Box 13.1 Converting an enzyme substrate to an inhibitor by extension tactics	225
Box 12.5 Natural ligands as lead compounds	200	Box 13.2 Simplification	230
Box 12.6 Examples of serendipity	201	Box 13.3 Rigidification tactics in drug design	233
Box 12.7 The use of NMR spectroscopy in finding lead compounds	203	Box 13.4 The structure-based drug design of crizotinib	236
Box 12.8 Click chemistry <i>in situ</i>	204	14 Drug design: optimizing access to the target	241
Box 12.9 Fragment-based design of a scaffold using X-ray crystallography	205	14.1 Optimizing hydrophilic/hydrophobic properties	241
13 Drug design: optimizing target interactions	209	14.1.1 Masking polar functional groups to decrease polarity	241
13.1 Structure–activity relationships	209	14.1.2 Adding or removing polar functional groups to vary polarity	242
13.1.1 Binding role of alcohols and phenols	209	14.1.3 Varying hydrophobic substituents to vary polarity	242
13.1.2 Binding role of aromatic rings	211	14.1.4 Variation of <i>N</i> -alkyl substituents to vary pK _a	243
13.1.3 Binding role of alkenes	211	14.1.5 Other structural variations affecting pK _a	243
13.1.4 Binding role of ketones and aldehydes	211	14.1.6 Bio-isosteres for polar groups involved in binding interactions	243
13.1.5 Binding role of amines	212		
13.1.6 Binding role of amides	213		
13.1.7 Binding role of quaternary ammonium salts	214		
13.1.8 Binding role of carboxylic acids	214		

14.2 Making drugs more resistant to chemical and enzymatic degradation	244	15 Getting the drug to market	265
14.2.1 Steric shields	244	15.1 Preclinical and clinical trials	265
14.2.2 Electronic effects of bio-isosteres and substituents	244	15.1.1 Toxicity testing	265
14.2.3 Steric and electronic modifications	245	15.1.2 Drug metabolism studies	266
14.2.4 Metabolic blockers	245	15.1.3 Pharmacology, formulation, and stability tests	267
14.2.5 Removal or replacement of susceptible metabolic groups	245	15.1.4 Clinical trials	268
14.2.6 Group shifts	246	15.1.4.1 Phase I studies	268
14.2.7 Ring variation and ring substituents	247	15.1.4.2 Phase II studies	269
14.3 Making drugs less resistant to drug metabolism	247	15.1.4.3 Phase III studies	269
14.3.1 Introducing metabolically susceptible groups	247	15.1.4.4 Phase IV studies	269
14.3.2 Self-destruct drugs	248	15.1.4.5 Ethical issues	270
14.4 Targeting drugs	249	15.2 Patenting and regulatory affairs	271
14.4.1 Targeting tumour cells: 'search and destroy' drugs	249	15.2.1 Patents	271
14.4.2 Targeting gastrointestinal infections	249	15.2.2 Regulatory affairs	272
14.4.3 Targeting peripheral regions rather than the central nervous system	249	15.2.2.1 The regulatory process	272
14.4.4 Targeting with membrane tethers	249	15.2.2.2 Fast-tracking and orphan drugs	273
14.4.5 Targeting antibacterial agents using siderophores	249	15.2.2.3 Good laboratory, manufacturing, and clinical practice	273
14.5 Reducing toxicity	250	15.2.2.4 Cost-versus-benefit analysis	274
14.6 Prodrugs	251	15.3 Chemical and process development	274
14.6.1 Prodrugs to improve membrane permeability	251	15.3.1 Chemical development	274
14.6.1.1 Esters as prodrugs	251	15.3.2 Process development	275
14.6.1.2 N-Methylated prodrugs	251	15.3.3 Choice of drug candidate	278
14.6.1.3 Trojan horse approach for transport proteins	253	15.3.4 Natural products	278
14.6.2 Prodrugs to prolong drug activity	253	Box 15.1 Drug metabolism studies and drug design	267
14.6.3 Prodrugs masking drug toxicity and side effects	253	Box 15.2 Synthesis of ebalzotan	276
14.6.4 Prodrugs to lower water solubility	255	Box 15.3 Synthesis of ICI D7114	276
14.6.5 Prodrugs to improve water solubility	255	<ul style="list-style-type: none"> ■ Case study 2 The design of ACE inhibitors ■ Case study 3 Artemisinin and related antimalarial drugs ■ Case study 4 The design of oxamniquine ■ Case study 5 Fosmidomycin as an antimalarial agent 	281
14.6.6 Prodrugs used in the targeting of drugs	256		288
14.6.7 Prodrugs to increase chemical stability	256		294
14.6.8 Prodrugs activated by external influence (sleeping agents)	256		300
14.7 Drug alliances	257		
14.7.1 'Sentry' drugs	257	Part D Tools of the trade	
14.7.2 Localizing a drug's area of activity	257		
14.7.3 Increasing absorption	257	16 Combinatorial and parallel synthesis	307
14.8 Endogenous compounds as drugs	257	16.1 Combinatorial and parallel synthesis in medicinal chemistry projects	307
14.8.1 Neurotransmitters	258	16.2 Solid-phase techniques	307
14.8.2 Natural hormones, peptides, and proteins as drugs	258	16.2.1 The solid support	308
14.9 Peptides and peptidomimetics in drug design	259	16.2.2 The anchor/linker	309
14.9.1 Peptidomimetics	260	16.2.3 Examples of solid-phase syntheses	309
14.9.2 Peptide drugs	261	16.3 Planning and designing a compound library	311
14.10 Oligonucleotides as drugs	262	16.3.1 'Spider-like' scaffolds	311
Box 14.1 The use of bio-isosteres to increase absorption	244	16.3.2 Designing 'drug-like' molecules	312
Box 14.2 Shortening the lifetime of a drug	248	16.3.3 Synthesis of scaffolds	312
Box 14.3 Identifying and replacing potentially toxic groups	250	16.3.4 Substituent variation	312
Box 14.4 Varying esters in prodrugs	252	16.3.5 Designing compound libraries for lead optimization	312
Box 14.5 Prodrugs masking toxicity and side effects	254	16.3.6 Computer-designed libraries	312
Box 14.6 Prodrugs to improve water solubility	255	16.4 Testing for activity	314
		16.4.1 High-throughput screening	314
		16.4.2 Screening 'on bead' or 'off bead'	314
		16.5 Parallel synthesis	315
		16.5.1 Solid-phase extraction	315

16.5.2	The use of resins in solution phase organic synthesis (SPOS)	316	17.12.8	Docking of flexible ligands: anchor and grow programs	350
16.5.3	Reagents attached to solid support: catch and release	317	17.12.8.1	Directed Dock and Dock 4.0	350
16.5.4	Microwave technology	317	17.12.8.2	FlexX	350
16.5.5	Microfluidics in parallel synthesis	319	17.12.8.3	The Hammerhead program	351
16.6	Combinatorial synthesis	320	17.12.9	Docking of flexible ligands: simulated annealing and genetic algorithms	353
16.6.1	The mix and split method in combinatorial synthesis	320	17.13	Automated screening of databases for lead compounds and drug design	354
16.6.2	Structure determination of the active compound(s)	321	17.14	Protein mapping	354
16.6.2.1	Tagging	321	17.14.1	Constructing a model protein: homology modelling	354
16.6.2.2	Photolithography	323	17.14.2	Constructing a binding site: hypothetical pseudoreceptors	356
16.6.3	Dynamic combinatorial synthesis	323	17.15	De novo drug design	358
Box 16.1	Examples of scaffolds	313	17.15.1	General principles of <i>de novo</i> drug design	358
Box 16.2	Dynamic combinatorial synthesis of vancomycin dimers	324	17.15.2	Automated <i>de novo</i> drug design	359

17.1	Molecular and quantum mechanics	328	17.15.2.2	SPROUT	361
17.1.1	Molecular mechanics	328	17.15.2.3	LEGEND	364
17.1.2	Quantum mechanics	328	17.15.2.4	GROW, ALLEGROW, and SYNOPSIS	365
17.1.3	Choice of method	328	17.16	Planning compound libraries	366
17.2	Drawing chemical structures	329	17.17	Database handling	366
17.3	3D structures	329	Box 17.1	Energy minimization of apomorphine	330
17.4	Energy minimization	329	Box 17.2	Study of HOMO and LUMO orbitals	334
17.5	Viewing 3D molecules	330	Box 17.3	Finding conformations of cyclic structures by molecular dynamics	337
17.6	Molecular dimensions	331	Box 17.4	Identification of an active conformation	343
17.7	Molecular properties	331	Box 17.5	Constructing a receptor map	357
17.7.1	Partial charges	331	Box 17.6	Designing a non-steroidal glucocorticoid agonist	365
17.7.2	Molecular electrostatic potentials	332	18	Quantitative structure-activity relationships (QSAR)	369
17.7.3	Molecular orbitals	333	18.1	Graphs and equations	369
17.7.4	Spectroscopic transitions	333	18.2	Physicochemical properties	370
17.7.5	The use of grids in measuring molecular properties	335	18.2.1	Hydrophobicity	370
17.8	Conformational analysis	336	18.2.1.1	The partition coefficient (P)	370
17.8.1	Local and global energy minima	336	18.2.1.2	The substituent hydrophobicity constant (π)	372
17.8.2	Molecular dynamics	336	18.2.1.3	P versus π	373
17.8.3	Stepwise bond rotation	337	18.2.2	Electronic effects	373
17.8.4	Monte Carlo and the Metropolis method	338	18.2.3	Steric factors	376
17.8.5	Genetic and evolutionary algorithms	339	18.2.3.1	Taft's steric factor (E_s)	376
17.9	Structure comparisons and overlays	340	18.2.3.2	Molar refractivity	376
17.10	Identifying the active conformation	342	18.2.3.3	Verloop steric parameter	376
17.10.1	X-ray crystallography	342	18.2.4	Other physicochemical parameters	376
17.10.2	Comparison of rigid and non-rigid ligands	342	18.3	Hansch equation	377
17.11	3D pharmacophore identification	344	18.4	The Craig plot	378
17.11.1	X-ray crystallography	344	18.5	The Topliss scheme	378
17.11.2	Structural comparison of active compounds	344	18.6	Bio-isosteres	381
17.11.3	Automatic identification of pharmacophores	344	18.7	The Free-Wilson approach	381
17.12	Docking procedures	345	18.8	Planning a QSAR study	382
17.12.1	Manual docking	345	18.9	Case study: anti-allergic activity of a series of pyranenamines	382
17.12.2	Automatic docking	345	18.10	3D QSAR	384
17.12.3	Defining the molecular surface of a binding site	346	18.10.1	Defining steric and electrostatic fields	385
17.12.4	Rigid docking by shape complementarity	346	18.10.2	Relating shape and electronic distribution to biological activity	385
17.12.5	The use of grids in docking programs	349			
17.12.6	Rigid docking by matching hydrogen-bonding groups	349			
17.12.7	Rigid docking of flexible ligands: the FLOG program	350			

xviii Detailed contents

18.10.3 Advantages of CoMFA over traditional QSAR	386	19.5.3.1 Carbapenems	425
18.10.4 Potential problems of CoMFA	387	19.5.3.2 Monobactams	425
18.10.5 Other 3D QSAR methods	387	19.5.4 β -Lactamase inhibitors	427
18.10.6 Case study: inhibitors of tubulin polymerization	388	19.5.4.1 Clavulanic acid	427
Box 18.1 Altering log P to remove central nervous system side effects	372	19.5.4.2 Penicillanic acid sulphone derivatives	427
Box 18.2 Insecticidal activity of diethyl phenyl phosphates	375	19.5.4.3 Olivanic acids	427
Box 18.3 Hansch equation for a series of antimalarial compounds	377	19.5.4.4 β -Lactamase inhibitors lacking a β -lactam ring	428
■ Case study 6 Design of a thymidylate synthase inhibitor	391	19.5.5 Other drugs that act on bacterial cell wall biosynthesis	429
		19.5.5.1 D-Cycloserine and bacitracin	429
		19.5.5.2 The glycopeptides: vancomycin and vancomycin analogues	430

Part E Selected topics in medicinal chemistry

19 Antibacterial agents	397	19.6 Antibacterial agents that act on the plasma membrane structure	435
19.1 History of antibacterial agents	397	19.6.1 Valinomycin and gramicidin A	435
19.2 The bacterial cell	398	19.6.2 Polymyxin B	435
19.3 Mechanisms of antibacterial action	399	19.6.3 Killer nanotubes	435
19.4 Antibacterial agents that act against cell metabolism (antimetabolites)	399	19.6.4 Cyclic lipopeptides	435
19.4.1 Sulphonamides	399	19.7 Antibacterial agents that impair protein synthesis: translation	436
19.4.1.1 The history of sulphonamides	400	19.7.1 Aminoglycosides	436
19.4.1.2 Structure–activity relationships	400	19.7.2 Tetracyclines	441
19.4.1.3 Sulphanilamide analogues	400	19.7.3 Chloramphenicol	446
19.4.1.4 Applications of sulphonamides	400	19.7.4 Macrolides	446
19.4.1.5 Mechanism of action	400	19.7.5 Lincosamides	447
19.4.2 Examples of other antimetabolites	403	19.7.6 Streptogramins	447
19.4.2.1 Trimethoprim	403	19.7.7 Oxazolidinones	447
19.4.2.2 Sulphones	404	19.7.8 Pleuromutilins	449
19.5 Antibacterial agents that inhibit cell wall synthesis	404	19.8 Agents that act on nucleic acid transcription and replication	451
19.5.1 Penicillins	404	19.8.1 Quinolones and fluoroquinolones	451
19.5.1.1 History of penicillins	404	19.8.2 Spiropyrimidinetriones	453
19.5.1.2 Structure of benzylpenicillin and phenoxyethylpenicillin	405	19.8.3 Aminoacridines	453
19.5.1.3 Properties of benzylpenicillin	405	19.8.4 Rifamycins	454
19.5.1.4 Mechanism of action for penicillin	406	19.8.5 Nitroimidazoles and nitrofurantoin	454
19.5.1.5 Resistance to penicillin	408	19.8.6 Inhibitors of bacterial RNA polymerase	454
19.5.1.6 Methods of synthesizing penicillin analogues	410	19.9 Miscellaneous agents	456
19.5.1.7 Structure–activity relationships of penicillins	411	19.10 Antibodies	456
19.5.1.8 Penicillin analogues	411	19.11 Drug resistance	458
19.5.1.9 Synergism of penicillins with other drugs	417	19.11.1 Drug resistance by mutation	458
19.5.2 Cephalosporins	418	19.11.2 Drug resistance by genetic transfer	459
19.5.2.1 Cephalosporin C	418	19.11.3 Other factors affecting drug resistance	459
19.5.2.2 Synthesis of cephalosporin analogues at position 7	418	19.11.4 The way ahead	459
19.5.2.3 First-generation cephalosporins	419	Box 19.1 Sulphonamide analogues with reduced toxicity	401
19.5.2.4 Second-generation cephalosporins	420	Box 19.2 Treatment of intestinal infections	402
19.5.2.5 Third-generation cephalosporins	421	Box 19.3 Clinical properties of benzylpenicillin and phenoxyethylpenicillin	406
19.5.2.6 Fourth-generation cephalosporins	422	Box 19.4 <i>Pseudomonas aeruginosa</i>	409
19.5.2.7 Fifth-generation cephalosporins	422	Box 19.5 The isoxazolyl penicillins	414
19.5.2.8 Resistance to cephalosporins	424	Box 19.6 Clinical aspects of β-lactamase-resistant penicillins	414
19.5.3 Other β -lactam antibiotics	425	Box 19.7 Ampicillin prodrugs	416
		Box 19.8 Clinical aspects of broad-spectrum penicillins	417
		Box 19.9 Synthesis of 3-methylated cephalosporins	421
		Box 19.10 Clinical aspects of cephalosporins	424
		Box 19.11 Clinical aspects of miscellaneous β-lactam antibiotics	426

Box 19.12 Clinical aspects of cycloserine, bacitracin, and vancomycin	435	20.7.4.11 Alternative design strategies for antiviral drugs targeting the HIV protease enzyme	492
Box 19.13 Clinical aspects of drugs acting on the plasma membrane	436	20.7.5 Integrase inhibitors	492
Box 19.14 Clinical aspects of aminoglycosides	438	20.7.6 Cell entry inhibitors	494
Box 19.15 Synthesis of plazomicin	439	20.7.6.1 Fusion inhibitors targeting the viral gp41 glycoprotein	494
Box 19.16 Synthesis of minocycline and amadacycline	443	20.7.6.2 Inhibitors of the viral glycoprotein gp120	497
Box 19.17 Synthesis of eravacycline	444	20.7.6.3 Inhibitors of the host cell CD4 protein	500
Box 19.18 Clinical aspects of tetracyclines and chloramphenicol	445	20.7.6.4 Inhibitors of the host cell CCR5 chemokine receptor	500
Box 19.19 Clinical aspects of macrolides, lincosamides, streptogramins, oxazolidinones, and pleuromutilins	450	20.8 Antiviral drugs acting against RNA viruses: flu virus	501
Box 19.20 Synthesis of ciprofloxacin	452	20.8.1 Structure and life cycle of the influenza virus	501
Box 19.21 Clinical aspects of quinolones and fluoroquinolones	453	20.8.2 Ion channel disrupters: adamantanes	503
Box 19.22 Nitroimidazoles in the treatment of sleeping sickness	455	20.8.3 Neuraminidase inhibitors	504
Box 19.23 Clinical aspects of rifamycins and miscellaneous agents	457	20.8.3.1 Structure and mechanism of neuraminidase	504
Box 19.24 Organoarsenicals as antiparasitic drugs	461	20.8.3.2 Transition-state inhibitors: development of zanamivir (<i>Relenza</i> TM)	506
20 Antiviral agents	465	20.8.3.3 Transition-state inhibitors: 6-carboxamides	507
20.1 Viruses and viral diseases	465	20.8.3.4 Carbocyclic analogues: development of oseltamivir (<i>Tamiflu</i> TM)	508
20.2 Structure of viruses	465	20.8.3.5 Other ring systems	509
20.3 Life cycle of viruses	466	20.8.3.6 Resistance studies	510
20.4 Vaccination	466	20.8.4 Cap-dependent endonuclease inhibitors	510
20.5 Antiviral drugs: general principles	467	20.9 Antiviral drugs acting against RNA viruses: cold virus	513
20.6 Antiviral drugs used against DNA viruses	468	20.10 Antiviral drugs acting against RNA viruses: hepatitis C	514
20.6.1 Inhibitors of viral DNA polymerase	468	20.10.1 Inhibitors of HCV NS3-4A protease	514
20.6.2 Inhibitors of the DNA terminase complex	471	20.10.1.1 Introduction	514
20.6.3 Kinase inhibitors	471	20.10.1.2 Design of boceprevir and telaprevir	515
20.6.4 Inhibitors of tubulin polymerization	472	20.10.1.3 Second-generation protease inhibitors	516
20.6.5 Antisense therapy	472	20.10.2 Inhibitors of HCV NS5B RNA-dependent RNA polymerase	518
20.6.6 Antiviral drugs acting against hepatitis B	472	20.10.3 Inhibitors of HCV NS5A protein	518
20.7 Antiviral drugs acting against RNA viruses: the human immunodeficiency virus (HIV)	474	20.10.3.1 Symmetrical inhibitors	518
20.7.1 Structure and life cycle of HIV	474	20.10.3.2 Unsymmetrical inhibitors	521
20.7.2 Antiviral therapy against HIV	475	20.10.4 Other targets	522
20.7.3 Inhibitors of viral reverse transcriptase	476	20.11 Broad-spectrum antiviral agents	528
20.7.3.1 Nucleoside reverse transcriptase inhibitors	476	20.11.1 Agents acting against cytidine triphosphate synthetase	528
20.7.3.2 Non-nucleoside reverse transcriptase inhibitors	477	20.11.2 Agents acting against S-adenosylhomocysteine hydrolase	528
20.7.4 Protease inhibitors	480	20.11.3 Ribavirin	528
20.7.4.1 The HIV protease enzyme	481	20.11.4 Interferons	529
20.7.4.2 Design of HIV protease inhibitors	482	20.11.5 Antibodies and ribozymes	529
20.7.4.3 Saquinavir	483	20.11.5.1 Antibodies	529
20.7.4.4 Ritonavir and lopinavir	485	20.11.5.2 Ribozymes	529
20.7.4.5 Indinavir	487	20.12 Bioterrorism and smallpox	530
20.7.4.6 Nelfinavir	489	Box 20.1 Clinical aspects of inhibitors targeting viral DNA polymerase or the DNA terminase complex	472
20.7.4.7 Palinavir	490	Box 20.2 Clinical aspects of antiviral drugs used against HIV	476
20.7.4.8 Amprenavir and darunavir	490	Box 20.3 Clinical aspects of reverse transcriptase inhibitors	480
20.7.4.9 Atazanavir	491	Box 20.4 Clinical aspects of protease inhibitors	481
20.7.4.10 Tipranavir	491	Box 20.5 The use of a chiral centre to control the absolute configuration of a second chiral centre	495
		Box 20.6 Clinical aspects of integrase inhibitors	496

Box 20.7 Clinical aspects of cell entry inhibitors	501	21.5.1 Agents that inhibit tubulin polymerization	564
Box 20.8 Clinical aspects of antiviral agents used in the treatment of hepatitis C	523	21.5.2 Agents that inhibit tubulin depolymerization	566
Box 20.9 The COVID-19 pandemic	524	21.6 Inhibitors of signalling pathways	567
Box 20.10 The 3C-like protease of SARS-CoV-2 as a target for novel antiviral agents	526	21.6.1 Inhibition of farnesyl transferase and the Ras protein	567
21 Anticancer agents	533	21.6.1.1 Inhibition of farnesyl transferase	567
21.1 Cancer: an introduction	533	21.6.1.2 Inhibition of KRAS	569
21.1.1 Definitions	533	21.6.2 Protein kinase inhibitors	570
21.1.2 Causes of cancer	533	21.6.3 Receptor antagonists of the hedgehog signalling pathway	570
21.1.3 Genetic faults leading to cancer: proto-oncogenes and oncogenes	533	21.7 Miscellaneous enzyme inhibitors	573
21.1.3.1 Activation of proto-oncogenes	533	21.7.1 Matrix metalloproteinase inhibitors	573
21.1.3.2 Inactivation of tumour suppression genes (anti-oncogenes)	533	21.7.2 Proteasome inhibitors	574
21.1.3.3 The consequences of genetic defects	534	21.7.3 Histone deacetylase inhibitors	577
21.1.4 Abnormal signalling pathways	534	21.7.4 Inhibitors of poly ADP ribose polymerase	578
21.1.5 Insensitivity to growth-inhibitory signals	534	21.7.5 Isocitrate dehydrogenase inhibitors	584
21.1.6 Abnormalities in cell cycle regulation	534	21.7.6 Inhibitors for Enhancer of Zeste homologue 2	588
21.1.7 Apoptosis and the p53 protein	535	21.7.7 Other enzyme targets	590
21.1.8 Telomeres	537	21.8 Agents affecting pro-survival and pro-apoptotic proteins	590
21.1.9 Angiogenesis	538	21.9 Agents affecting nuclear transport proteins	592
21.1.10 Tissue invasion and metastasis	539	21.10 Miscellaneous anticancer agents	592
21.1.11 Treatment of cancer	539	21.10.1 Synthetic agents	593
21.1.12 Resistance	540	21.10.2 Natural products	594
21.2 Drugs acting directly on nucleic acids	541	21.10.3 Modulation of transcription factor-coactivator interactions	595
21.2.1 Intercalating agents	541	21.10.4 PROTAC	596
21.2.2 Non-intercalating agents that inhibit the action of topoisomerase enzymes on DNA	543	21.11 Photodynamic therapy	597
21.2.2.1 Podophyllotoxins	543	21.12 Radionuclide therapy	598
21.2.2.2 Camptothecins	543	21.13 The role of biologics in anticancer therapy	598
21.2.3 Alkylating and metallating agents	544	Box 21.1 Clinical aspects of intercalating agents	542
21.2.3.1 Nitrogen mustards	544	Box 21.2 Clinical aspects of non-intercalating agents inhibiting the action of topoisomerase enzymes on DNA	544
21.2.3.2 Cisplatin and cisplatin analogues: metallating agents	546	Box 21.3 Clinical aspects of alkylating and metallating agents	548
21.2.3.3 CC 1065 analogues	546	Box 21.4 Clinical aspects of antimetabolites	555
21.2.3.4 Ecteinascidins	546	Box 21.5 Clinical aspects of hormone-based therapies	563
21.2.3.5 Other alkylating agents	549	Box 21.6 Clinical aspects of drugs acting on structural proteins	566
21.2.4 Chain cutters	549	Box 21.7 Clinical effects of smoothened inhibitors of the hedgehog signalling pathway	573
21.3 Drugs acting on enzymes: antimetabolites	549	Box 21.8 Clinical aspects of PARP-1 inhibitors	587
21.3.1 Dihydrofolate reductase inhibitors	549	Box 21.9 Clinical effects of isocitrate dehydrogenase inhibitors	588
21.3.2 Inhibitors of thymidylate synthase	550	Box 21.10 Clinical effects of tazemetostat	589
21.3.3 Inhibitors of ribonucleotide reductase	552	Box 21.11 Clinical aspects of exportin 1 inhibitors	594
21.3.4 Inhibitors of adenosine deaminase	552	22 Protein kinase inhibitors as anticancer agents	601
21.3.5 Cytidine deaminase inhibitors	553	22.1 Introduction	601
21.3.6 Inhibitors of DNA polymerases	553	22.1.1 The active site of protein kinases	601
21.3.7 Purine antagonists	553	22.1.2 Classification of protein kinase inhibitors	602
21.3.8 DNA methyltransferase inhibitors	553	22.1.3 Selectivity and resistance	603
21.4 Hormone-based therapies	557	22.2 Kinase inhibitors of the epidermal growth factor receptor (EGFR)	603
21.4.1 Glucocorticoids, estrogens, progestins, and androgens	557		
21.4.2 Luteinizing hormone-releasing hormone receptor agonists and antagonists	557		
21.4.3 Anti-estrogens	559		
21.4.4 Anti-androgens	559		
21.4.5 Aromatase inhibitors	560		
21.4.6 Mitotane	562		
21.4.7 Somatostatin receptor agonists	562		
21.5 Drugs acting on structural proteins	564		

22.3 Kinase inhibitors of Abelson tyrosine kinase, c-KIT, PDGFR, and SRC	608	Box 22.12 Clinical aspects of kinase inhibitors for neurotrophic tropomyosin receptor kinase (NTRK or TRK) and ROS1	637
22.4 Kinase inhibitors of c-KIT and PDGFR	612	Box 22.13 Clinical aspects of miscellaneous kinase inhibitors	639
22.5 Inhibitors of cyclin-dependent kinases (CDKs)	613	Box 22.14 Design of sorafenib	643
22.6 Kinase inhibitors of the MAPK signal transduction pathway	616	Box 22.15 Clinical aspects of multi-target kinase inhibitors and inhibitors of protein–protein interactions	645
22.6.1 BRAF inhibitors	616		
22.6.2 MEK inhibitors	617		
22.7 Kinase inhibitors of PI3K-PIP ₃ pathways	620	23 Antibodies and other biologics	649
22.7.1 Introduction	620	23.1 The immune system	649
22.7.2 Inhibitors of phosphoinositide 3-kinase	620	23.1.1 Introduction	649
22.7.3 Inhibitors of Bruton's tyrosine kinase	623	23.1.2 Phagocytes	649
22.8 Kinase inhibitors of anaplastic lymphoma kinase (ALK)	627	23.1.3 B-cells, plasma cells, and antibody production	649
22.9 Kinase inhibitors of RET and KIF5B-RET	631	23.1.4 T-cell lymphocytes	649
22.10 Kinase inhibitors of Janus kinase	632	23.1.5 The complement system	650
22.11 Kinase inhibitors of vascular endothelial growth factor receptor (VEGFR)	633	23.1.6 Antibodies	650
22.12 Kinase inhibitors of fibroblast growth factor receptor (FGFR)	633	23.2 Antibody manufacture	651
22.13 Kinase inhibitors of neurotrophic tropomyosin receptor tyrosine kinase (NTRK or TRK) and ROS1	635	23.3 Monoclonal antibodies as anticancer agents	653
22.14 Kinase inhibitors of FMS-like tyrosine kinase 3 (FLT3)	637	23.3.1 Introduction	653
22.15 Kinase inhibitors of colony-stimulating factor-1 receptor (CSF-1R)	639	23.3.2 Monoclonal antibodies targeting the HER family of receptors	654
22.16 Kinase inhibitors of the hepatocyte growth factor receptor (HGFR or c-MET)	640	23.3.3 Antibodies targeting VEGF and VEGFR	654
22.17 Multi-receptor tyrosine kinase inhibitors	643	23.3.4 Antibodies targeting the RANK ligand	654
22.18 Kinase inhibition involving protein–protein binding interactions	645	23.3.5 Antibodies targeting the glycolipid GD2	655
22.19 Kinase degradation induced by protein–protein binding interactions	646	23.3.6 Antibodies targeting interleukins	655
22.20 Summary	646	23.3.7 Antibodies targeting CD proteins in B-cells	656
Box 22.1 General synthesis of gefitinib and related analogues	604	23.3.7.1 Antibodies targeting CD52	656
Box 22.2 Clinical aspects of EGF-receptor kinase inhibitors	607	23.3.7.2 Antibodies targeting CD20	656
Box 22.3 General synthesis of imatinib and analogues	609	23.3.7.3 Antibodies targeting CD19	656
Box 22.4 Clinical aspects of kinase inhibitors acting on Bcr-Abl, c-KIT, and PDGFR	613	23.3.8 Antibodies targeting CD proteins on plasma cells	658
Box 22.5 Clinical aspects of cyclin-dependent kinase inhibitors	615	23.3.8.1 Antibodies targeting SLAMF7 (CD319)	658
Box 22.6 Clinical aspects of kinase inhibitors affecting the MAPK signal transduction pathway	619	23.3.8.2 Antibodies targeting CD38	658
Box 22.7 Clinical aspects of kinase inhibitors targeting the PI3K-PIP ₃ pathway	625	23.3.9 Antibodies targeting the CCR4 receptor	659
Box 22.8 Clinical aspects of anaplastic lymphoma kinase (ALK) inhibitors	630	23.3.10 Monoclonal antibodies acting on immune checkpoints	660
Box 22.9 Clinical aspects of kinase inhibitors acting on RET and KIF5B-RET	632	23.3.10.1 Introduction	660
Box 22.10 Clinical aspects of Janus kinase inhibitors	632	23.3.10.2 Antibodies targeting CTLA-4	660
Box 22.11 Clinical aspects of fibroblast growth factor inhibitors	635	23.3.10.3 Antibodies targeting the programmed death receptor (PD-1)	660
		23.3.10.4 Antibodies targeting programmed death ligand 1	661
		23.4 Antibody-drug conjugates	662
		23.4.1 Introduction	662
		23.4.2 Antibody-drug conjugates targeting HER2	664

xxiv Detailed contents

28.4 Endothelin receptor antagonists as antihypertensive agents	787	24.13 Anticholinesterases and acetylcholinesterases	805
28.4.1 Endothelins and endothelin receptors	787	24.13.1 28.9.2.2 PAR-1 antagonists	806
28.4.2 Endothelin antagonists	788	24.13.2 P2Y ₁₂ -Antagonists	807
28.4.3 Dual-action agents	788	24.13.3 GpIIb/IIIa antagonists	808
28.5 Vasodilators	789	28.9.3 Fibrinolytic drugs	808
28.5.1 Modulators of soluble guanylate cyclase	789	Box 28.1 Synthesis of dihydropyridines	794
28.5.2 Phosphodiesterase type 5 inhibitors	791	■ Case study 7 Steroidal anti-inflammatory agents	811
28.5.3 Neprilysin inhibitors	791	■ Case study 8 Current research into antidepressant agents	821
28.5.4 Prostacyclin agonists	792	■ Case study 9 The design and development of aliskiren	826
28.5.5 Miscellaneous vasodilators	792	■ Case study 10 Factor Xa inhibitors	832
28.6 Calcium entry blockers	793	■ Case study 11 Reversible inhibitors of HCV NS3-4A protease	838
28.6.1 Introduction	793	Appendix 1 Essential amino acids	843
28.6.2 Dihydropyridines	794	Appendix 2 The standard genetic code	844
28.6.3 Phenylalkylamines	796	Appendix 3 Statistical data for QSAR	845
28.6.4 Benzothiazepines	796	Appendix 4 The action of nerves	848
28.7 Funny ion channel inhibitors	797	Appendix 5 Microorganisms	852
28.8 Lipid-regulating agents	798	Appendix 6 Drugs and their trade names	854
28.8.1 Statins	798	Appendix 7 Trade name (drug name)	865
28.8.2 Fibrates	799	Appendix 8 Potential hydrogen bond donors (HBDs) and hydrogen bond acceptors (HBAs) in common functional groups	878
28.8.3 Dual- and pan-PPAR agonists	799	Appendix 9 Using the Protein Data Bank	880
28.8.4 Antisense drugs	799	Glossary	883
28.8.5 Inhibitors of transfer proteins	801	General Further Reading	905
28.8.6 Antibodies as lipid-lowering agents	801	Index	907
28.8.7 ATP citrate lyase inhibitors	802		
28.9 Antithrombotic agents	802		
28.9.1 Anticoagulants	803		
28.9.1.1 Introduction	803		
28.9.1.2 Direct thrombin inhibitors	803		
28.9.1.3 Factor Xa inhibitors	804		
28.9.2 Antiplatelet agents	805		
28.9.2.1 Introduction	805		
28.9.2.2 Antagonists of the adrenergic receptor	684		
24.9.1 Action and use of adrenergic antagonists	684		
24.9.2 Mechanism of action of adrenergic antagonists	685		
24.9.2.1 Atropine and scopolamine	685		
24.9.2.2 Second-generation adrenergic antagonists	685		
24.9.2.3 Other adrenergic antagonists	687		
24.9.2.4 Discovered by chance	687		
24.9.2.5 Clinical applications	687		
24.10 Antagonists of the nicotinic receptor	687		
24.10.1 Applications of nicotinic antagonists	687		
24.10.2 Nicotinic antagonists	687		
24.10.2.1 Structure of the nicotinic receptor	687		
24.10.2.2 Decamethonium and suxamethonium	691		
24.10.2.3 Steroidal neuromuscular blocking agents	691		
24.10.2.4 Atracurium and rocuronium	692		
24.10.2.5 Other nicotinic antagonists	693		
24.11 Receptor structures	694		
24.12 Anticholinesterases and acetylcholinesterases	694		
24.12.1 Effect of anticholinesterases	694		
24.12.2 Structure of the acetylcholinesterase	694		
24.12.3 The active site of acetylcholinesterase	695		
24.12.3.1 General staining grids within the active site	695		
24.12.3.2 Mechanism of hydrolysis	695		
24.13 Anticholinesterases and acetylcholinesterases	695		
24.13.1 Structure of the acetylcholinesterase	695		
24.13.2 The active site of acetylcholinesterase	695		
24.13.3 General staining grids within the active site	695		
24.13.4 Mechanism of hydrolysis	695		
24.14 Anticholinesterases and acetylcholinesterases	695		
24.14.1 Structure of the acetylcholinesterase	695		
24.14.2 The active site of acetylcholinesterase	695		
24.14.3 General staining grids within the active site	695		
24.14.4 Mechanism of hydrolysis	695		
24.15 Anticholinesterases and acetylcholinesterases	695		
24.15.1 Structure of the acetylcholinesterase	695		
24.15.2 The active site of acetylcholinesterase	695		
24.15.3 General staining grids within the active site	695		
24.15.4 Mechanism of hydrolysis	695		
24.16 Anticholinesterases and acetylcholinesterases	695		
24.16.1 Structure of the acetylcholinesterase	695		
24.16.2 The active site of acetylcholinesterase	695		
24.16.3 General staining grids within the active site	695		
24.16.4 Mechanism of hydrolysis	695		
24.17 Anticholinesterases and acetylcholinesterases	695		
24.17.1 Structure of the acetylcholinesterase	695		
24.17.2 The active site of acetylcholinesterase	695		
24.17.3 General staining grids within the active site	695		
24.17.4 Mechanism of hydrolysis	695		
24.18 Anticholinesterases and acetylcholinesterases	695		
24.18.1 Structure of the acetylcholinesterase	695		
24.18.2 The active site of acetylcholinesterase	695		
24.18.3 General staining grids within the active site	695		
24.18.4 Mechanism of hydrolysis	695		
24.19 Anticholinesterases and acetylcholinesterases	695		
24.19.1 Structure of the acetylcholinesterase	695		
24.19.2 The active site of acetylcholinesterase	695		
24.19.3 General staining grids within the active site	695		
24.19.4 Mechanism of hydrolysis	695		
24.20 Anticholinesterases and acetylcholinesterases	695		
24.20.1 Structure of the acetylcholinesterase	695		
24.20.2 The active site of acetylcholinesterase	695		
24.20.3 General staining grids within the active site	695		
24.20.4 Mechanism of hydrolysis	695		
24.21 Anticholinesterases and acetylcholinesterases	695		
24.21.1 Structure of the acetylcholinesterase	695		
24.21.2 The active site of acetylcholinesterase	695		
24.21.3 General staining grids within the active site	695		
24.21.4 Mechanism of hydrolysis	695		
24.22 Anticholinesterases and acetylcholinesterases	695		
24.22.1 Structure of the acetylcholinesterase	695		
24.22.2 The active site of acetylcholinesterase	695		
24.22.3 General staining grids within the active site	695		
24.22.4 Mechanism of hydrolysis	695		
24.23 Anticholinesterases and acetylcholinesterases	695		
24.23.1 Structure of the acetylcholinesterase	695		
24.23.2 The active site of acetylcholinesterase	695		
24.23.3 General staining grids within the active site	695		
24.23.4 Mechanism of hydrolysis	695		
24.24 Anticholinesterases and acetylcholinesterases	695		
24.24.1 Structure of the acetylcholinesterase	695		
24.24.2 The active site of acetylcholinesterase	695		
24.24.3 General staining grids within the active site	695		
24.24.4 Mechanism of hydrolysis	695		
24.25 Anticholinesterases and acetylcholinesterases	695		
24.25.1 Structure of the acetylcholinesterase	695		
24.25.2 The active site of acetylcholinesterase	695		
24.25.3 General staining grids within the active site	695		
24.25.4 Mechanism of hydrolysis	695		
24.26 Anticholinesterases and acetylcholinesterases	695		
24.26.1 Structure of the acetylcholinesterase	695		
24.26.2 The active site of acetylcholinesterase	695		
24.26.3 General staining grids within the active site	695		
24.26.4 Mechanism of hydrolysis	695		
24.27 Anticholinesterases and acetylcholinesterases	695		
24.27.1 Structure of the acetylcholinesterase	695		
24.27.2 The active site of acetylcholinesterase	695		
24.27.3 General staining grids within the active site	695		
24.27.4 Mechanism of hydrolysis	695		
24.28 Anticholinesterases and acetylcholinesterases	695		
24.28.1 Structure of the acetylcholinesterase	695		
24.28.2 The active site of acetylcholinesterase	695		
24.28.3 General staining grids within the active site	695		
24.28.4 Mechanism of hydrolysis	695		
24.29 Anticholinesterases and acetylcholinesterases	695		
24.29.1 Structure of the acetylcholinesterase	695		
24.29.2 The active site of acetylcholinesterase	695		
24.29.3 General staining grids within the active site	695		
24.29.4 Mechanism of hydrolysis	695		
24.30 Anticholinesterases and acetylcholinesterases	695		
24.30.1 Structure of the acetylcholinesterase	695		
24.30.2 The active site of acetylcholinesterase	695		
24.30.3 General staining grids within the active site	695		
24.30.4 Mechanism of hydrolysis	695		
24.31 Anticholinesterases and acetylcholinesterases	695		
24.31.1 Structure of the acetylcholinesterase	695		
24.31.2 The active site of acetylcholinesterase	695		
24.31.3 General staining grids within the active site	695		
24.31.4 Mechanism of hydrolysis	695		
24.32 Anticholinesterases and acetylcholinesterases	695		
24.32.1 Structure of the acetylcholinesterase	695		
24.32.2 The active site of acetylcholinesterase	695		
24.32.3 General staining grids within the active site	695		
24.32.4 Mechanism of hydrolysis	695		
24.33 Anticholinesterases and acetylcholinesterases	695		
24.33.1 Structure of the acetylcholinesterase	695		
24.33.2 The active site of acetylcholinesterase	695		
24.33.3 General staining grids within the active site	695		
24.33.4 Mechanism of hydrolysis	695		
24.34 Anticholinesterases and acetylcholinesterases	695		
24.34.1 Structure of the acetylcholinesterase	695		
24.34.2 The active site of acetylcholinesterase	695		
24.34.3 General staining grids within the active site	695		
24.34.4 Mechanism of hydrolysis	695		
24.35 Anticholinesterases and acetylcholinesterases	695		
24.35.1 Structure of the acetylcholinesterase	695		
24.35.2 The active site of acetylcholinesterase	695		
24.35.3 General staining grids within the active site	695		
24.35.4 Mechanism of hydrolysis	695		
24.36 Anticholinesterases and acetylcholinesterases	695		
24.36.1 Structure of the acetylcholinesterase	695		
24.36.2 The active site of acetylcholinesterase	695		
24.36.3 General staining grids within the active site	695		
24.36.4 Mechanism of hydrolysis	695		
24.37 Anticholinesterases and acetylcholinesterases	695		
24.37.1 Structure of the acetylcholinesterase	695		
24.37.2 The active site of acetylcholinesterase	695		
24.37.3 General staining grids within the active site	695		
24.37.4 Mechanism of hydrolysis	695		
24.38 Anticholinesterases and acetylcholinesterases	695		
24.38.1 Structure of the acetylcholinesterase	695		
24.38.2 The active site of acetylcholinesterase	695		
24.38.3 General staining grids within the active site	695		
24.38.4 Mechanism of hydrolysis	695		
24.39 Anticholinesterases and acetylcholinesterases	695
