

CONTENTS

Preface vii

PART I BASIC STATISTICAL CONCEPTS 1

1 ABOUT STATISTICS 2

- 1-1 The Meaning of Statistics 3
The Role of Statistics 4 / Types of Statistics: Descriptive, Inferential, and Exploratory 5 / Exercises 7
- 1-2 Statistical Data 7
Classifications for Data and Variables 7 / Types of Quantitative Data 8 / Exercises 9
- 1-3 The Population and the Sample 9
Distinguishing Between the Data Set, Population, and Sample 10 / Elementary Units 11 / Working Population and the Frame 12 / Qualitative and Quantitative Populations 12 / Deductive and Inductive Statistics 13 / Statistical Error 15 / Exercises 15
- Summary 16**
- Real-Life Statistical Challenge 17**
- Review Exercises 20**
- Statistics in Practice 21**

2 DESCRIBING AND DISPLAYING STATISTICAL DATA 22

- 2-1 The Frequency Distribution 23
Finding a Meaningful Pattern for the Data 23 / Graphical Displays: The Histogram 24 / Graphical Displays: The Frequency Polygon 25 / Describing a Population: The Frequency Curve 26 / Descriptive Analysis 27 / Constructing a Frequency Distribution: Number and Width of Class Intervals 28 / Stem-and-Leaf Plots 30 / Accommodating Extreme Values 31 / Computer-Assisted Construction 32 / Qualitative Frequency Distributions 32 / The Pie Chart 33 / Exercises 36
- 2-2 Relative and Cumulative Frequency Distributions 39
Relative Frequency Distributions 39 / Cumulative Frequency Distributions 42 / Exercises 43
- 2-3 Common Forms of the Frequency Distribution 45
Exercises 47
- 2-4 Displaying Data in Multiple Dimensions 48
Quantitative Data Displays—The Scatter Diagram 48 / Qualitative Data Displays—The Cross Tabulation 49 / Higher Dimensional Data 50 / Exercises 50

2-5 Special Data Displays 51
 The Box Plot 51 / The Control Chart 53 / The Time Series Plot
 53 / Exercises 53
Summary 54
Real-Life Statistical Challenge 55
Review Exercises 58
Statistics in Practice 60
Case: Ingrid's Hallmark Shop I 62

3 SUMMARY DESCRIPTIVE MEASURES 64

3-1 The Arithmetic Measures 65
 Symbolic Expressions for Calculating the Arithmetic Mean 65 / The
 Population and Sample Mean 66 / Using a Computer to Calculate the
 Mean 66 / Decision Making with the Mean 67 / Approximating the
 Mean Using Grouped Data 68 / Exercises 69

3-2 The Median and the Mode 72
 The Median 72 / The Median Contrasted with the Mean 72 / The
 Mode 73 / Finding the Median and Mode From a Stem-and-Leaf Plot
 74 / Positional Comparison of Measures: Skewed Distributions 74 /
 Bimodal Distributions 76 / Exercises 76

3-3 Percentiles, Fractiles, and Quartiles 79
 Exercises 84

3-4 Measuring Variability 86
 Importance of Variability 86 / Distance Measures of Dispersion 88 /
 The Interquartile Range 88 / The Box Plot and Quartiles 90 /
 Measures of Average Deviation 90 / The Variance 91 / The Sample
 and Population Variance 92 / The Standard Deviation 92 / Using a
 Computer to Calculate the Standard Deviation 93 / Shortcut
 Calculations for the Variance and Standard Deviation 94 / A Practical
 Use for the Standard Deviation 96 / Exercises 98

3-5 The Proportion 100
 Exercises 101
Summary 102
Real-Life Statistical Challenge 104
Review Exercises 107
Statistics in Practice 110
Case: Ingrid's Hallmark Shop II 111

4 THE STATISTICAL SAMPLING STUDY 114

4-1 The Need for Samples 115
 The Economic Advantages of Using a Sample 115 / The Time Factor
 115 / The Very Large Population 116 / Partly Inaccessible
 Populations 116 / The Destructive Nature of the Observation 116 /
 Accuracy and Sampling 117 / Exercises 117

4-2 Designing and Conducting a Sampling Study 118
 The Importance of Planning 118 / Data Collection 120 / Data
 Analysis and Conclusions 120

4-3 Bias and Error in Sampling 120
 Sampling Error 120 / Sampling Bias 121 / Nonsampling Error
 122 / Exercises 124

- 4-4 Selecting the Sample 125
 The Convenience Sample 125 / The Judgment Sample 126 / The
 Random Sample 126 / Sample Selection Using Random Numbers
 127 / Types of Random Samples 129 / Exercises 131
- 4-5 Selecting Statistical Procedures 132
Summary 135
Real-Life Statistical Challenge 136
Review Exercises 139
Statistics in Practice 139
Case: Boomville 141

5 PROBABILITY 145

- 5-1 Basic Probability Concepts 146
 Probability as Long-Run Frequency 146 / The Random Experiment
 and Its Elementary Events 146 / Complicating Issues 148 /
 Objective and Subjective Probabilities 148 / The Law of Large
 Numbers 149 / Exercises 149
- 5-2 Probabilities for Composite Events 150
 The Sample Space, Composite Events, and Event Sets 150 / The
 Count-and-Divide Method for Computing Probabilities 152 /
 Probability Estimates 152 / Certain and Impossible Events 154 /
 Alternative Expressions of Probability 154 / Probability and Samples
 154 / Exercises 155
- 5-3 Joint Probability and the Multiplication Law 156
 The Joint Probability Table 156 / Mutually Exclusive and
 Collectively Exhaustive Events 157 / Joint Events and Probabilities
 157 / Marginal Probabilities 157 / The Multiplication Law for
 Finding “And” Probabilities 158 / Some Advice and Warnings
 About the Multiplication Law 159 / Joint Probabilities Involving
 More Than Two Events 160 / Probabilities When Elementary Events
 are not Equally Likely 160 / Exercises 161
- 5-4 Finding Probabilities Using the Addition Law 162
 The Addition Law for Finding “Or” Probabilities 163 / Some
 Advice and Warning About the Addition Law 163 / Mutually
 Exclusive and Collectively Exhaustive Events 165 / Application to
 Complementary Events 165 / Exercises 166
- 5-5 Statistical Independence 167
 A Definition of Statistical Independence 167 / A Basic Test for
 Independence Between Events 167 / Commonly Encountered
 Instances of Statistical Independence 168 / Independent Events and
 the Multiplication Law 169 / Finding Joint Probabilities For
 Dependent Events 169 / Constructing a Joint Probability Table
 Without a Cross Tabulation 170 / Exercises 171
- 5-6 Conditional Probability and the General Multiplication
 Law 171
 Computing Conditional Probabilities 172 / Conditional Probability
 and Statistical Independence 176 / The General Multiplication Law
 176 / Constructing a Joint Probability Table with the Assistance of the
 General Multiplication Law 178 / Exercises 179

5-7 Probability Trees and Further Laws 181
 The Probability Tree Diagram 181 / Multiplication Law for Several Events 183 / The General Addition Law 184 / Common Errors in Applying the Laws of Probability 185 / Exercises 186
Summary 188
Real-Life Statistical Challenge 190
Review Exercises 192
Statistics in Practice 197
Case: The Three Marketeers 198

**PART II DRAWING CONCLUSIONS FROM SAMPLES:
 INFERENCE STATISTICS 201**

6 PROBABILITY DISTRIBUTIONS, EXPECTED VALUE, AND SAMPLING 202

6-1 Random Variables and Probability Distributions 203
 The Random Variable 203 / The Probability Distribution 203 / Finding the Probability Distribution 206 / Probability Trees and Sampling 208 / Discrete and Continuous Random Variables 212 / Exercises 213

6-2 Expected Value and Variance 214
 The Expected Value of a Random Variable 214 / The Variance of a Random Variable 215 / Expected Value and Variance in Decision Making 216 / Exercises 217

6-3 Population Parameters and Sampling 219
 Population Parameters 219 / Probability for a Randomly Selected Observation 220 / Exercises 221

6-4 The Sampling Distribution of the Mean 222
 Sampling with and without Replacement 224 / An Empirical Approximation of the Sampling Distribution of the Mean 225 / Some Theoretical Properties of the Sampling Distribution of the Mean 228 / Exercises 230

6-5 Binomial Probabilities: The Sampling Distribution of the Proportion 230
 The Bernoulli Process 232 / The Number of Combinations 232 / The Binomial Formula 234 / Important Properties of the Binomial Distribution 236 / The Cumulative Probability Distribution 238 / Using Binomial Probability Tables 240 / Expected Value and Variance of a Binomial Random Variable 243 / The Sampling Distribution of the Proportion 243 / Exercises 245

6-6 Continuous Probability Distributions 248
 Smoothed Curve Approximation 249 / Probability Density Function 250 / Cumulative Probability Distribution 251 / The Expected Value and the Variance 252
Summary 252
Real-Life Statistical Challenge 254
Review Exercises 256

Statistics in Practice 259

Case: AlphaComp 260

7 THE NORMAL DISTRIBUTION 263

7-1 Characteristics of the Normal Distribution 264

7-2 Finding Areas Under the Normal Curve 267

Using the Normal Curve Table 269 / Cumulative Probabilities and Percentiles 273 / The Standard Normal Random Variable 274 / Additional Remarks 276 / Exercises 276

7-3 Sampling Distribution of the Sample Mean for a Normal Population 277

The Role of the Standard Error 279 / Exercises 282

7-4 Sampling Distribution of \bar{X} When the Population Is Not Normal 283

A Multiple-Sample Experiment 283 / The Central Limit Theorem 285 / Exercises 290

7-5 Sampling Distributions of P and the Normal Approximation 291

Advantages of Approximating the Binomial Distribution 291 / The Normal Distribution as an Approximation 292 / An Application of the Normal Approximation to Acceptance Sampling 297 / Exercises 298

Summary 299

Real-Life Statistical Challenge 300

Review Exercises 302

Statistics in Practice 303

Case: MBA Income and Stature 304

7-6 Optional Topic: Sampling Distribution of \bar{X} When the Population Is Small 307

Finite Population Correction Factor 308 / Optional Exercises 309

8 STATISTICAL ESTIMATION 311

8-1 Estimators and Estimates 312

The Estimation Process 312 / Credibility and Precision in Estimation 314 / Choosing an Estimator 314 / Criteria for Statistics Used as Estimators 314 / Commonly Used Estimators 316 / Exercises 318

8-2 Interval Estimates of the Mean When σ Is Known 319

Confidence and Meaning of the Interval Estimate 321 / Constructing the Confidence Interval 321 / Features Desired in a Confidence Interval 323 / Computer-Generated Confidence Intervals 324 / Exercises 324

8-3 Interval Estimates of the Mean When σ Is Unknown 326

The Student t distribution 326 / Constructing the Confidence Interval 328 / Computer-Generated Confidence Intervals 330 / Confidence Intervals When n Is Large 330 / Exercises 332

8-4 Interval Estimates of the Population Proportion 334

Exercises 335

8-5	Choosing the Sample Size and Selecting the Estimator	336
	Error and Reliability	336 / Steps for Finding the Required Sample Size to Estimate the Mean
		338 / Three Influences on Sample Size
		340 / Finding a Planning Estimate of σ
		341 / Steps for Finding the Required Sample Size to Estimate the Proportion
		343 / Choosing the Estimator
		344 / Reliability Versus Confidence and Tolerable Error Versus Precision
		346 / Exercises
	Summary	348
	Real-Life Statistical Challenge	350
	Review Exercises	351
	Statistics in Practice	353
	Case: Brown and Becker's Budget	354

9 HYPOTHESIS TESTING 357

9-1	Basic Concepts of Hypothesis Testing: Testing a New Drug	358
	The Null and Alternative Hypotheses	359 / Making the Decision
		360 / Finding the Error Probabilities
		362 / Choosing the Decision Rule
		363 / Making the Decision
		364 / Formulating Hypotheses
		364 / Exercises
9-2	Testing the Mean	368
	The Hypothesis-Testing Steps	368 / Upper-Tailed Test
		372 / Lower-Tailed Tests
		376 / Two-Sided Tests
		379 / Hypothesis Testing and Confidence Intervals
		382 / Summary of Testing the Mean
		382 / Variations in Hypothesis-Testing Procedures
		382 / Exercises
9-3	Testing the Proportion	391
	Using P as the Test Statistic	391 / Exercises
9-4	Selecting the Test	395
	Some Important Questions	395 / The Power Curve
		395 / Efficiency and Power
		396
9-5	Limitations of Hypothesis-Testing Procedures	396
	Summary	398
	Real-Life Statistical Challenge	399
	Review Exercises	400
	Statistics in Practice	403
	Case: SynerGentex	403

10 REGRESSION AND CORRELATION 406

10-1	Regression Analysis	407
	The Scatter Diagram	408 / The Data and the Regression Equation
		408 / Some Characteristics of the Regression Line
		411 / Fitting a Straight Line to the Data
		412 / Exercises
10-2	Correlation Analysis	413
	The Correlation Coefficient	417 / Computing the Correlation Coefficient
		418 / Exercises
10-3	Finding the Regression Equation	423

- The Method of Least Squares 423 / Illustration of the Method 425 / Meaning and Use of the Regression Line 426 / Measuring Variability in Results 427 / Computer-Assisted Regression Analysis 430 / Exercises 432
- 10-4 Assumptions and Properties of Linear Regression Analysis 435
 Assumptions of Linear Regression Analysis 435 / Sampling and Regression Analysis 436 / Estimating the True Regression Equation 438 / Inferences Regarding Regression Coefficients 439 / Exercises 439
- 10-5 Predictions and Statistical Inferences Using the Regression Line 440
 Predictions Using the Regression Equation 440 / Prediction Intervals for the Conditional Mean 441 / Prediction Intervals for an Individual Value of Y Given X 444 / Computer-Generated Interval Estimates 444 / Inferences Regarding the Slope of the Regression Line 445 / Exercises 445
- 10-6 Assessing the Quality of Regression Analysis 446
 The Coefficient of Determination 446 / Appropriateness of the Model: Residual Analysis 451 / Exercises 454
- 10-7 Common Pitfalls and Limitations of Regression and Correlation Analysis 456
 Dangers of Extrapolation in Regression Analysis 456 / Relevancy of Past Data 457 / Correlation and Causality 457
- 10-8 Nonlinear Regression Analysis 458
 Solving by Transformation of Variables 460 / Fitting a Polynomial 460 / Exercises 461
Summary 461
Real-Life Statistical Challenge 463
Review Exercises 464
Statistics in Practice 466
Case: La Boutique Fantasque 468
- 10-9 Optional Topic: Inferences Regarding Regression Coefficients 469
 Confidence Interval Estimate of B 469 / Testing Hypotheses About B 470 / Using B to Make Statistical Inferences About ρ 471 / Computer-Assisted Inferences About Regression Coefficients 472 / Optional Exercises 472

11 MULTIPLE REGRESSION AND CORRELATION 474

- 11-1 Linear Multiple Regression Involving Three Variables 475
 Regression in Three Dimensions 475
- 11-2 Multiple Regression Using the Method of Least Squares 477
 Illustration: Predicting Supermarket Profits 478 / Advantages of Multiple Regression 480 / Residuals and the Standard Error of the Estimate 482 / Assumptions of Multiple Regression 484 /

Challenges and Pitfalls of Multiple Regression Analysis 484 / Exercises 488

11-3 Multiple Regression: Computer Applications 490
Computer-Assisted Multiple Regression Analysis 491 / Exercises 493

11-4 Inferences in Regression Analysis 496
Prediction Intervals in Multiple Regression 496 / Inferences Regarding Regression Coefficients 498 / Exercises 500

11-5 Multiple Correlation 500
Coefficient of Multiple Determination 500 / Partial Correlation 502 / Exercises 504

11-6 Finding a Predictive Regression Model 506
Goals for a Predictive Model 506 / Searching for the Best Predictors: All Regressions 507 / Stepwise Regression 507 / Illustration: Performance Predictors for Baseball Batter Superstar Salary 509 / Fine-Tuning the Model I: Eliminating Outliers 511 / Kinds of Stepwise Regression 512 / Stepwise Regression with a Computer 512 / Selecting Screening Parameters 513 / Fine-Tuning the Model II: Finding a Regression Equation that Makes Sense 516 / Exercises 516

11-7 Dummy Variable Techniques 518
Using a Dummy Variable 519 / Using a Dummy Variable with Time Series 522 / Using a Dummy Variable in Interactive Multiple Regression 523 / Exercises 525
Summary 528
Real-Life Statistical Challenge 530
Review Exercises 532
Statistics in Practice 537
Case: Adventures in Regression Land 538

11-8 Optional Topic: Polynomial Regression 541
Optional Exercises 544

PART III IMPORTANT BUSINESS APPLICATIONS OF STATISTICS 547

12 FORECASTING WITH TIME SERIES 548

12-1 The Time Series and Its Components 549

12-2 The Classical Time-Series Model 550
Illustration: A Time Series for Stereo Speaker Sales 550 / Exercises 555

12-3 Analysis of Secular Trend 557
Describing Trend 557 / Determining Linear Trend Using Least Squares 558 / Modifying Trend for Periods Shorter Than One Year 559 / Forecasting Sales Using a Trend Line 561 / Nonlinear Trend: Exponential Trend Curve 563 / Exercises 568

12-4 Forecasting with Moving Averages and Seasonal Indexes 570

- Ratio-to-Moving-Average Method 570 / Finding the Seasonal Indexes 572 / Deseasonalized Data 573 / Making the Forecast 574 / Exercises 574
- 12-5 Identifying Cycles and Irregular Fluctuation 577
- 12-6 Exponential Smoothing 577
Forecasting Errors 578 / Two-Parameter Exponential Smoothing 579 / Computer Applications 582 / Seasonal Exponential Smoothing with Three Parameters 583 / Fine-Tuning Exponential-Smoothing Parameters 589 / Further Exponential-Smoothing Procedures 590 / Exercises 591
- Summary 593**
Real-Life Statistical Challenge 594
Review Exercises 595
Statistics in Practice 598
Case: BugOff Chemical Company 601

13 STATISTICAL QUALITY CONTROL 603

- 13-1 The Control Chart for Qualitative Data 604
Establishing Control Limits for the Proportion 605 / Applying the Control Chart 607 / Further Remarks 609 / Exercises 609
- 13-2 The Control Chart for Quantitative Data 610
The Control Chart for the Sample Mean 612 / The Control Chart for the Sample Range 614 / Implementing Statistical Control 615 / Exercises 615
- 13-3 Acceptance Sampling 617
Basic Concepts of Acceptance Sampling 617 / Producer's and Consumer's Risk 618 / Selecting the Decision Rule 618 / Sequential Sampling 619 / Exercises 620
- Summary 621**
Real-Life Statistical Challenge 622
Review Exercises 624
Case: Billings, Kidd, and Hickock 625

14 INDEX NUMBERS 627

- 14-1 Price Indexes 628
- 14-2 Aggregate Price Indexes 630
Exercises 633
- 14-3 The Consumer Price Index 635
Exercises 637
- 14-4 Deflating Time Series Using Index Numbers 637
Exercises 639
- Summary 639**
Real-Life Statistical Challenge 641
Review Exercises 642
Statistics in Practice 643
Case: The Variety Galore Stores 645

PART IV FURTHER TOPICS IN INFERENCE STATISTICS 647**15 CONTROLLED EXPERIMENTS: TWO-SAMPLE INFERENCE 648**

- 15-1 The Nature of Two-Sample Inferences 649
Controlled Experiments 649 / Independent and Matched-Pairs Samples 649 / The Sample Size Dichotomy 649
- 15-2 Confidence Intervals For The Difference Between Means 650
Independent Samples 650 / Matched-Pairs Samples 655 / Matched-Pairs Compared to Independent Samples 659 / Exercises 660
- 15-3 Hypothesis Tests for Comparing Two Means 663
Independent Samples 663 / Matched-Pairs Samples 667 / The Efficiency of Matched-Pairs Testing 670 / Exercises 670
- 15-4 Hypothesis Tests for Comparing Proportions 672
Exercises 675
Summary 675
Real-Life Statistical Challenge 677
Review Exercises 679
Statistics in Practice 682
Case: The MBA Mystique 683

16 CHI-SQUARE APPLICATIONS 685

- 16-1 Testing for Independence and the Chi-Square Distribution 686
Independence Between Qualitative Variables 686 / Contingency Tables and Expected Frequencies 689 / The Chi-Square Statistic 691 / The Chi-Square Distribution 693 / The Hypothesis-Testing Steps 694 / Special Considerations 696 / Exercises 696
- 16-2 Testing for Equality of Several Proportions 699
Illustration: Testing Advertisements for Memory Recall 699 / Exercises 701
- 16-3 Other Chi-Square Applications 703
Summary 703
Review Exercises 704
Statistics in Practice 706
Case: Gumball's Attitude Survey 708
- 16-4 Optional Topic: Inferences Regarding the Population Variance 709
Probabilities for the s^2 Variable 710 / Confidence Interval Estimate of σ^2 711 / Testing Hypothesis Regarding σ^2 712 / Normal Approximation for Large Sample Sizes 715 / Optional Exercises 716

17 ANALYSIS OF VARIANCE 718

- 17-1 Analysis of Variance and the F Distribution 719
Testing for Equality of Means: Evaluating Three Fertilizers 719 /

The Single-Factor Model 722 / Sample Means 723 / Using Variability to Identify Differences 724 / Deviations About Sample Means 724 / Summarizing Variation in Sample Data 725 / The Basis for Comparison 728 / The ANOVA Table 729 / The F Statistic 729 / The F Distribution 731 / Testing the Null Hypothesis 732 / Computer-Assisted Analysis 733 / Further Considerations 733 / Violations of the Underlying Model 735 / Exercises 736

17-2 Estimating Treatment Means and Differences 739

Confidence Interval for a Treatment Population Mean 740 / Pairwise Comparisons of Treatment Means 741 / Computer-Generated Confidence Intervals 741 / Exercises 742

17-3 Multiple Comparisons 743

Illustration: Chemical Composition Cost 744 / Multiple Comparisons of the Treatment Population Means 745 / Computer-Assisted Evaluations 748 / Estimating Individual Treatment Population Means 748 / Combining Two Families of Collective Estimates 750 / Exercises 750

17-4 Designing the Experiment 751

Exercises 753

Summary 754

Review Exercises 756

Case: Goody Sellers 759

17-5 Optional Topic: Unequal Sample Sizes 760

Illustration: Shelf Arrangements in Stores 761

18 MULTIPLE-FACTOR ANALYSIS OF VARIANCE 763

18-1 The Two-Factor Analysis of Variance 764

The Populations and Means 765 / The Underlying Model 766 / Testing the Null Hypotheses 769 / Sample Data for Two-Factor Experiments 770 / Applying the Procedure: Placement and Day for Advertising 770 / Analytical Framework 771 / The Two-Factor ANOVA Table 772 / Deciding a Course of Action 774 / Computer-Assisted Analysis 775 / Special Case—One Observation Per Cell 776 / Exercises 778

18-2 Analysis of Factor Effects 783

No Interactions Case: Multiple Pairwise Comparisons of Factor-Level Means 783 / Significant Interactions Case: Multiple Contrasts Among Treatment Means 787 / Exercises 791

18-3 The Randomized Block Design 792

Illustration: Evaluating Three Different Fertilizer Treatments 793 / Analytical Framework and Theoretical Model 794 / Testing the Null Hypothesis for One Factor 795 / Computer-Assisted Analysis 797 / Multiple Comparisons of Factor-Level Means 797 / Exercises 800

18-4 Three-Factor Experiments: The Latin-Square Design 802

Illustration: Comparing Training Methods 802 / Exercises 805

Summary	806
Review Exercises	808
Case: Making a Commercial Success	811

19 NONPARAMETRIC STATISTICS 814

19-1	The Need for Nonparametric Statistics	815
	Advantages of Nonparametric Statistics	815 / Disadvantages of Nonparametric Statistics 816
19-2	Comparing Two Populations Using Independent Samples: The Wilcoxon Rank-Sum Test	816
	Description of the Test	816 / One-Sided Test Applications: Evaluating Compensation Plans 819 / The Problem of Ties 820 / Comparing the Wilcoxon Test and Student t Test 821 / Exercises 822
19-3	The Mann-Whitney U Test	824
19-4	Comparing Two Populations Using Matched Pairs: The Sign Test	824
	Description of the Test: Comparing Two Razor Blades 824 / Illustration: Evaluating a New Training Procedure for Telephone Operators 827 / Comparing the Sign Test and the Student t Test 828 Exercises / 829	
19-5	The Wilcoxon Signed-Rank Test for Matched Pairs	832
	Description of the Test 832 / Illustration: Evaluating a New Training Program for Telephone Operators 833 / Comparing the Wilcoxon Signed-Rank Test and the Sign Test 834 / Exercises 836	
19-6	Testing for Randomness: The Number-of-Runs Test	838
	The Need to Test for Randomness 838 / The Number-of-Runs Test 838 / Illustration: Testing the 1970 Draft Lottery for Randomness 840 / The Meaning of the Draft Lottery Results 843 / Other Tests for Randomness 844 / Exercises 844	
19-7	The Rank Correlation Coefficient	846
	Usefulness of Rank Correlation 847 / Exercises 848	
19-8	One-Factor Analysis of Variance: The Kruskal-Wallis Test	849
	Alternative to the F Test 849 / Description of the Test: Comparing Programming Aptitudes by Major 849 / Exercises 851	
	Summary	852
	Review Exercises	853
	Case: Brimbow, Hatter, and Baldwin	856

PART V PROBABILITY APPLICATIONS FOR BUSINESS ANALYSIS 859

20 SUBJECTIVE PROBABILITY IN BUSINESS DECISIONS 860

20-1	Probabilities Obtained from History	861
------	-------------------------------------	-----

- 20-2 Subjective Probabilities 861
 Betting Odds 862 / Substituting a Hypothetical Lottery for the Real Gamble: Probabilities for Designing a Sonar 862 / Exercises 864
- 20-3 Determining a Normal Curve Judgmentally 864
 Finding the Mean 865 / Finding the Standard Deviation 865 / Exercises 867
- 20-4 The Judgmental Probability Distribution: The Interview Method 867
 Illustration: Judgmental Probability Distribution for Demand 868 / Common Shapes of Subjective Probability Curves 870 / Approximating the Subjective Probability Distribution 872 / Exercises 873
- 20-5 Finding a Probability Distribution from Actual/Forecast Ratios 876
 Exercises 877
- 20-6 Additional Remarks 878
 Summary 878
 Review Exercises 880
 Case: The Permian Plunge 880

21 REVISING PROBABILITIES AND COUNTING POSSIBILITIES 883

- 21-1 Revising Probabilities Using Bayes' Theorem 884
 Prior Probabilities 884 / Posterior Probabilities 885 / Conditional Result Probabilities 885 / Bayes' Theorem 885 / Posterior Probabilities Computed from the Joint Probability Table 887 / Exercises 888
- 21-2 Counting Methods for Determining Probabilities 890
 The Principle of Multiplication 890 / Number of Possibilities Raised to a Power 891 / The Number of Ways to Sequence Items—The Factorial 892 / A Sequence of Some Objects—The Permutation 893 / The Number of Permutations 894 / The Combination 895 / The Number of Combinations 896 / Exercises 899
 Summary 900
 Review Exercises 902
 Case: Ourman Friday Temporaries 903

22 IMPORTANT PROBABILITY DISTRIBUTIONS FOR BUSINESS DECISIONS 906

- 22-1 The Hypergeometric Distribution 907
 Finding Probabilities when Sampling without Replacement 907 / Expressing the Hypergeometric Distribution 909 / Illustration: Inspecting Electronic Test Equipment 910 / Hypergeometric Distribution for the Proportion of Successes 912 / Exercises 913
- 22-2 The Poisson Distribution 914
 The Poisson Process 915 / Expressing the Poisson Distribution 915 / Assumptions of a Poisson Process 916 / Practical Limitations of the Poisson Distribution 917 / Using Poisson

Probability Tables 918 / Applications Not Involving Time 920 / Exercises 920

22-3 The Uniform Distribution 922
Exercises 924

22-4 The Exponential Distribution 925
Finding Interevent Probabilities 925 / Applications of the Exponential Distribution 928 / Exercise 931

Summary 932

Review Exercises 934

Case: New Guernsey Toll Authority 935

23 TESTING FOR GOODNESS OF FIT 938

23-1 Importance of Knowing the Distribution 939

23-2 The Chi-Square Test for Goodness of Fit 940

Illustration: Testing SAT Scores for Normality 940 / The Chi-Square Test Statistic 942 / The Hypothesis-Testing Steps 943 / Testing Using Unknown Population Parameters 945 / Testing for the Poisson Probability Distribution 946 / Exercises 949

23-3 The Kolmogorov-Smirnov One-Sample Test 952

An Alternative to the Chi-Square Test 952 / Description of the Test: Aircraft Delay Times 952 / Finding the Decision Rule and the Critical Value 955 / Investigating the Type II Error 955 / Comparing the Kolmogorov-Smirnov Test and the Chi-Square Test 956 / Exercises 956

Summary 957

Review Exercises 958

Case: University Consultants 959

PART VI DECISION ANALYSIS 961

24 BASIC CONCEPTS OF DECISION MAKING 962

24-1 Certainty and Uncertainty in Decision Making 963

24-2 Elements of Decisions 964

The Decision Table 964 / The Decision Tree Diagram 965

24-3 Ranking the Alternatives and the Payoff Table 965

Objectives and Payoff Values 966 / Illustration: Choosing a Movement for Tippi-Toes 966 / Exercises 968

24-4 Reducing the Number of Alternatives: Inadmissible

Acts 970

Exercises 971

24-5 Maximizing Expected Payoff: The Bayes Decision Rule 971

Exercises 972

24-6 Decision Tree Analysis 973

Illustration: Ponderosa's Marketing Decision 973 / The Decision Tree Diagram 973 / Determining the Payoffs 975 / Assigning Event Probabilities 976 / Backward Induction 977 / Additional

Remarks 979 / Exercises 980

Summary 982

Review Exercises 983

Case: Gypsy Moth Eradication 984

25 ELEMENTS OF DECISION THEORY 986

25-1 Decision Criteria 987

The Maximin Payoff Criterion 987 / The Maximum Likelihood Criterion 990 / The Criterion of Insufficient Reason 991 / The Preferred Criterion: The Bayes Decision Rule 991 / Exercises 992

25-2 Opportunity Loss and the Expected Value of Perfect Information 993

Opportunity Loss 994 / The Bayes Decision Rule and Opportunity Loss 995 / The Expected Value of Perfect Information 995 / EVPI and Opportunity Loss 997 / Exercises 998

25-3 Advantages and Limitations of the Bayes Decision Rule 999

Exercises 1000

25-4 Decision Making Using Certainty Equivalents 1000

Decision Rule: Choose the Greatest Certainty Equivalent 1001 / Finding the Certainty Equivalent 1002 / The Risk Premium 1003 / Discounting Expected Values by the Risk Premiums 1004 / Illustration: Ponderosa Record Company 1005 / Decision Tree Analysis 1007 / Exercises 1009

Summary 1009

Review Exercises 1011

Case: SoftWhereHaus 1012

26 BAYESIAN ANALYSIS OF DECISIONS USING EXPERIMENTAL INFORMATION 1015

26-1 Stages for Analyzing Decisions Using Experiments 1016

Illustration: An Oil Wildcatter's Drilling Decision 1017

26-2 Prior Analysis of the Decision 1017

The Role of EVPI 1018 / Exercises 1018

26-3 Preposterior and Posterior Analysis 1019

Probability Evaluations 1020 / Using Probability Trees 1022 / Decision Tree Analysis 1025 / Exercises 1026

26-4 Decision Making Using Strategies 1027

Illustration: The Cannery Inspector 1028 / Extensive and Normal Form Analysis 1031 / Obviously Nonoptimal Strategies 1033 / Exercises 1034

26-5 Preposterior Analysis: Valuing and Deciding About Experimental Information 1035

The Expected Value of Experimental Information: EVEI 1035 / The Expected Net Gain of Experimenting: ENGE 1036 / Using ENGE to Choose Alternative Experiments 1037 / Finding EVEI Using a Strategy Table 1038 / Exercises 1039

- 26-6 Future Analysis 1041
 Summary 1041
 Review Exercises 1042
 Case: Comp-u-Com 1045

27 BAYESIAN ANALYSIS OF DECISIONS USING SAMPLE INFORMATION 1046

- 27-1 Decision Making with the Proportion 1047
 Application to Acceptance Sampling: Disk Drive Quality 1048 /
 Prior Analysis of the Decision 1049 / Posterior Analysis Using
 Sample Information 1049 / The Decision Rule and Critical Value
 1051 / Exercises 1052
- 27-2 Valuing Sample Information 1055
 The Expected Value of Sample Information 1055 / The Expected
 Net Gain of Sampling 1056 / Preposterior Analysis of Sample
 Information 1057 / Payoff Functions in Decision Making 1059 /
 Exercises 1062
- 27-3 Decision Making with the Sample Mean 1063
 Illustration: A Computer Memory Device Decision 1063 / Prior
 Analysis 1064 / Posterior Analysis 1065 / Preposterior Analysis
 1069 / Exercises 1069
- 27-4 Computer Evaluations of Decision Making with the
 Proportion 1071
 Tabular Data Input 1071 / Functional Input for Linear Payoffs
 1073 / Exercises 1077
- 27-5 Bayesian and Traditional Statistics 1078
 Hypothesis-Testing Concepts Reviewed 1078 / Contrasting the
 Two Approaches 1081 / Exercises 1083
- 27-6 Additional Remarks 1084
 Summary 1085
 Review Exercises 1086
 Case: Charismatic Chimeras 1088

28 BAYESIAN ANALYSIS USING THE NORMAL DISTRIBUTION 1091

- 28-1 Structure of Decision Making with the Normal
 Distribution 1092
 Computer Memory Device Decision 1093
- 28-2 Decision Making Using Opportunity Losses 1093
 Linear Payoff Functions and the Breakeven Mean 1094 / Finding
 Opportunity Losses 1095 / Approximating Probabilities for the
 Normal Curve 1096 / Finding Expected Opportunity Losses
 1097 / EVPI: Minimum Expected Opportunity Loss 1098 /
 Exercises 1099
- 28-3 Streamlined Prior Analysis without Sample
 Information 1099
 Identifying the Act Having Minimum Expected Opportunity Loss
 1099 / The Normal Loss Function 1100 / Finding the EVPI

- 1101 / Illustration: ATM Transaction Times 1103 / Exercises
1105
- 28-4 Decision Structure when Sampling Is
Considered 1106
- 28-5 Decisions Regarding the Sample: Preposterior
Analysis 1106
The Population Frequency Distribution 1107 / Probabilities for \bar{X}
1108 / The Expected Value of Sample Information 1109 / The
Decision to Sample and Finding the Optimal n 1111 / Exercises
1111
- 28-6 Posterior Analysis for a Given Sample Size 1112
Posterior Expected Value of μ 1114 / The Decision Rule and
Critical Value for the Sample Mean 1115 / Posterior Variance and
Standard Deviation for μ 1116 / Concepts from Information
Theory 1116 / Exercises 1117
- 28-7 Additional Remarks 1119
Summary 1119
Review Exercises 1122
Case: Pickwick Pipe Shoppes 1124

29 DECISION MAKING WITH UTILITY 1126

- 29-1 Attitudes, Preferences, and Utility 1127
The Decision to Buy Insurance 1127
- 29-2 Numerical Utility Values 1129
The Saint Petersburg Paradox 1129 / The Validity of Logarithmic
Values 1130 / Outcomes without a Natural Payoff Measure 1130 /
Exercises 1131
- 29-3 The Assumptions of Utility Theory 1131
- 29-4 Assigning Utility Values 1134
Gambles and Expected Utility 1135 / The Reference Lottery
1135 / Obtaining Utility Values 1136 / Attitude Versus Judgment
1138 / Utility and the Bayes Decision Rule 1138 /
Exercises 1139
- 29-5 The Utility for Money 1140
Applying the Utility Function in Decision Analysis 1140 /
Certainty Equivalents and Utilities 1142 / Utility and the Decision
to Buy Insurance 1142 / Attitudes toward Risk and the Shape of
the Utility Curve 1144 / The Risk Averter 1145 / The Risk
Seeker 1145 / The Risk-Neutral Individual 1145 / Composite
Attitudes Toward Risk 1146 / Exercises 1147
- 29-6 Constructing the Utility Function 1149
The Interview Method 1149 / Implementing the Utility Function
1153 / Exercises 1153
- 29-7 Attitudes toward Risk and Variation in Decision Making
1154
The Risk Averter 1154 / The Risk Seeker 1156 / The Risk-
Neutral Individual 1157 / Decision Making with a Narrow Payoff

Range 1157 / Ratifying the Bayes Decision Rule and the Delegation of Authority 1158 / Exercises 1159
