Contents

Preface vii

1 Proofs, Mathematical and Non-mathematical 1

1.1 Introduction 1
1.2 Inductive and deductive reasoning 2
1.3 A proof or not a proof? 5

2 Propositional Logic 15

2.1 Propositions and truth values 15
2.2 Logical connectives 17
2.3 Tautologies and contradictions 31
2.4 Logical implication and logical equivalence 33
2.5 Arguments and argument forms 41
2.6 Formal proof of the validity of arguments 49
2.7 The method of conditional proof 57

3 Predicate Logic 63

3.1 Introduction 63
3.2 Quantification of propositional functions 65
3.3 Two-place predicates 71
3.4 Validation of arguments in predicate logic 79

4 Axiom Systems and Formal Proof 89

4.1 Introduction 89
4.2 Case study of a proof 90
4.3 Axiom systems 93
4.4 Theorems and formal proofs 105
4.5 Informal proofs 116

5 Direct Proof **121**

5.1 The method of direct proof 121
5.2 Finding proofs 138
5.3 More advanced examples 154

6 Direct Proof: Variations **167**

6.1 Introduction 167
6.2 Proof using the contrapositive 167
6.3 Proof by contradiction 172
6.4 Proof of a biconditional 178

7 Existence and Uniqueness Proofs **185**

7.1 Introduction 185
7.2 Proof by construction 186
7.3 Non-constructive existence proofs 191
7.4 Use of counter-examples 195
7.5 Uniqueness proofs 202

8 Further Proof Techniques **209**

8.1 Introduction 209
8.2 Proofs of identities 211
8.3 Use of counting arguments 220
8.4 The method of exhaustion 232

9 Mathematical Induction **239**

9.1 The principle of mathematical induction 239
9.2 The second principle of mathematical induction 256

Appendix: Some Definitions and Terminology **265**

References and Further Reading **273**

Hints and Solutions to Selected Exercises **275**

Index **313**
