CONTENTS

the following geology professors
 who provided very constructive
 CD-ROM
 Alan I. Benimoff
 The College of Staten Island
 J. V. Chemosky
 University of Maine
 Brooks Ellwood
 University of Texas-Arlington
 Joseph Nadeau

PART ONE • THE THIRD PLANET 1

Chapter 1 • Earth in Space: The Science of the Earth System 3

- What Is Geology? 4
- The Home Planet 5
 - The Solar System 5
 - What Makes the Earth Unique? 11
- Earth System Science 15
 - The System Concept 16
 - The Earth System 18
 - Cycles and Interactions 19
 - Uniformitarianism 22
- Why Study Geology? 24
- What's Ahead* 24

Geology Around Us: A View of the Earth from Space 14

- Chapter Highlights* 26 *The Language of Geology* 26
- Questions for Review* 27 *Questions for Thought and Discussion* 27

Chapter 2 • Earth's Materials: Atoms, Elements, Minerals, and Rocks 29

- The Three States of Matter 30
- Simple Substances 31
 - Elements 32
 - Atoms and Isotopes 32
 - Ions 33
- Compounds 34
 - Molecules and Bonding 34
- Minerals 37
 - Characteristics of Minerals 37
 - Properties of Minerals 39
- The Common Mineral Families 44
 - Silicates: The Most Important Rock-Formers 48
 - Oxides and Other Mineral Groups 49
- The Common Rock Families 52
 - What Holds Rocks Together? 53
- What's Ahead* 53

Geology Around Us: Minerals in Everyday Life 46

Chapter Highlights 54 *The Language of Geology* 54
Questions for Review 55 *Questions for Thought and Discussion* 55

Chapter 3 • Earth in Time: The Rock Record and Geologic Time 57

Relative Age 58

Stratigraphy 58

Gaps in the Record 60

Fossils and Correlation 60

The Geologic Column 64

Eons and Eras 65

Periods and Epochs 65

Absolute Age 67

Early Attempts 67

Radioactivity and Absolute Age 69

Absolute Time and the Geologic Column 72

The Magnetic Polarity Dating Scheme 73

Precambrian Time and the Age of the Earth 77

What's Ahead 79

Geology Around Us: Dating Human Ancestors 76

Chapter Highlights 79 *The Language of Geology* 80
Questions for Review 80 *Questions for Thought and Discussion* 80

❧ *The Art of Geology* 82

PART TWO • THE DYNAMIC EARTH 85**Chapter 4 • Plate Tectonics: A Unifying Theory 87**

A Revolution in Geology 88

Continental Drift 89

The Missing Clue: Paleomagnetic Bands and the Spreading Sea Floor 97

The Plate Tectonic Model 98

Plate Tectonics in a Nutshell 98

The Search for a Mechanism 105

What's Ahead 109

Geology Around Us: The Hawaiian Islands: A Record of Plate Motion 110

Chapter Highlights 114 *The Language of Geology* 115
Questions for Review 115 *Questions for Thought and Discussion* 115

Chapter 5 • Earthquakes and the Earth's Interior 117

Looking into the Earth 118

Direct Sampling 118

Remote Study of the Earth's Interior 121

Earthquakes 125

What Causes Earthquakes? 126

How Earthquakes Are Studied 128

Earthquake Hazards and Prediction 134

xiv Contents

- The Inside of the Earth Revisited 140
 How Earthquakes Reveal the Inside of the Earth 140
 Summary: Layers of Earth 142
What's Ahead 145

Geology Around Us: All Shook Up: A Postcard from California 124

- Chapter Highlights* 146 *The Language of Geology* 147
Questions for Review 147 *Questions for Thought and Discussion* 147

Chapter 6 • From the Earth's Interior: Volcanoes and Igneous Rocks 149

- Why Do Rocks Melt? 150
 Heat and Pressure Inside the Earth 151
 Partial Melting 153
 Magma and Lava 155
Cooling and Crystallization 156
 Rate of Cooling and Crystallization 156
 Fractional Crystallization 163
Plutons and Plutonism 165
 Batholiths and Stocks 165
 Dikes and Sills 168
Volcanoes and Volcanism 168
 Eruptions, Landforms, and Materials 169
 Hazards and Prediction 174
What's Ahead 181

Geology Around Us: Lakes of Death in Cameroon 178

- Chapter Highlights* 181 *The Language of Geology* 182
Questions for Review 183 *Questions for Thought and Discussion* 183
Virtual Internship: You Be the Geologist 183

The Art of Geology 184

PART THREE • THE CHANGING EARTH 187

Chapter 7 • Weathering and Erosion 189

- The Rock Cycle 190
Weathering: How Rock Disintegrates 191
 Mechanical Weathering 192
 Chemical Weathering 193
 Factors That Influence Weathering 196
Soil 200
 Soil Profiles 200
 Classification of Soils 201
Erosion 206
 Erosion by Water 206
 Erosion by Wind 208
 Erosion by Ice 208

- Mass Wasting 209
 - Slope Failures 212
 - Flows 212
 - Mass Wasting in Cold Climates 213
- What's Ahead* 213

Geology Around Us: Soil for Food 204

- Chapter Highlights* 214 *The Language of Geology* 214
- Questions for Review* 215 *Questions for Thought and Discussion* 215

Chapter 8 • From Sediment to Rock: Rocks That Form Near the Earth's Surface 217

- Archives of the Earth's History 218
- Sediments and Sedimentation 219
 - Clastic Sediment 220
 - Chemical Sediment 223
 - Biogenic Sediment 224
- Sedimentary Rocks 225
 - Lithification 225
 - Clastic Sedimentary Rocks 226
 - Chemical Sedimentary Rocks 226
 - Biogenic Sedimentary Rocks 228
- Depositional Environments 229
 - Environmental Clues in Sedimentary Rocks 229
 - Sedimentary Facies 232
 - Common Sediments on Land 233
 - Common Marine Sediments 234
- What's Ahead* 237

Geology Around Us: The Gravel Page: Forensic Geology 228

- Chapter Highlights* 238 *The Language of Geology* 238
- Questions for Review* 239 *Questions for Thought and Discussion* 239

Chapter 9 • Folds, Faults, and Geologic Maps 241

- Rock Deformation 242
 - Stress and Strain 243
 - Factors That Influence Deformation 244
- Structural Geology 247
 - Strike and Dip 248
 - Faults 249
 - Joints 253
 - Folds 253
- Geologic Maps 257
 - Making and Interpreting Geologic Maps 257
 - Geologic Cross Sections 262
 - Rock Deformation and Landscapes 264
- What's Ahead* 267

Geology Around Us: The World's Oldest Geologic Map 260

- Chapter Highlights* 267 *The Language of Geology* 268
- Questions for Review* 269 *Questions for Thought and Discussion* 269

Chapter 10 • Metamorphism: Making New Rock From Old 271

What Is Metamorphism? 272

Limits of Metamorphism 272

Factors That Influence Metamorphism 274

The Influence of Pore Fluids 274

Effects of Pressure 275

Effects of Temperature 277

The Influence of Time 281

Three Types of Metamorphism 281

Contact Metamorphism 282

Burial Metamorphism 282

Regional Metamorphism 283

Isograds and Metamorphic Facies 284

Kinds of Metamorphic Rocks 286

Rocks with Foliation 286

Rocks without Foliation 289

Metasomatism 289

What's Ahead 291

Geology Around Us: Metamorphism and the Game of Billiards 278

Chapter Highlights 292 *The Language of Geology* 292

Questions for Review 293 *Questions for Thought and Discussion* 293

Chapter 11 • The Rock Cycle Revisited 295

Planet-Shaping Processes 296

The Role of Impact Cratering 296

The Tectonic Planet 299

Igneous Rocks and Plate Tectonics 302

Igneous Rocks of the Ocean Basins 303

Igneous Rocks along Convergent Plate Margins 309

Igneous Rocks of Continental Interiors 311

Metamorphism along Plate Margins 314

Passive Continental Margins and Burial Metamorphism 314

Subduction Margins and Blueschist Metamorphism 315

Continental Collisions and Regional Metamorphism 316

When Continents Erode 316

Rift Valleys 317

Intermontane Valleys and Structural Basins 317

Deep Ocean Trenches 319

What's Ahead 319

Geology Around Us: The Fascinating World of the Midocean Ridge 306

Chapter Highlights 320 *The Language of Geology* 320

Questions for Review 321 *Questions for Thought and Discussion* 321

 The Art of Geology 323

PART FOUR • WATER WORLD 325**Chapter 12 • Water On and Under the Ground 327**

- The Water Cycle 330
 - Pathways and Processes 330
 - Reservoirs 331
 - Why Is the Water Cycle Important? 334
- Freshwater on the Surface 334
 - Streams and Streamflow 335
 - Stream Landforms and Drainage Patterns 336
 - Types of Channels 337
 - Lakes 343
 - Flooding 344
 - Hazards Associated with Flooding 345
 - Flood Prediction 347
 - Human Intervention 349
 - Surface Freshwater as a Resource 349
- Freshwater Underground 352
 - The Water Table 352
 - How Groundwater Moves 352
 - Caves, Caverns, and Karst 355
 - Groundwater as a Resource 358
 - Groundwater Mining 360
 - Groundwater Contamination 361
- What's Ahead* 362

Geology Around Us: The Death of the Aral Sea 350

- Chapter Highlights* 363 *The Language of Geology* 364
- Questions for Review* 364 *Questions for Thought and Discussion* 365
- Virtual Internship: You Be the Geologist* 365

Chapter 13 • Oceans, Winds, Waves, and Coastlines 367

- The Atmosphere 368
 - What is Air Made Of? 368
 - Layers in the Atmosphere 370
 - Movement in the Atmosphere 372
- Global Circulation and the Earth's Climate System 375
 - The Difference Between Weather and Climate 376
 - The Earth's Climate Zones 376
- The Ocean 377
 - The Ocean Basins 377
 - Composition of Seawater 378
 - Layers in the Ocean 379
 - Ocean Currents 379
 - The Ocean Helps Regulate Climate 381
- Where Ocean Meets Land 383
 - Tides and Sea Level Changes 384
 - Ocean Waves 385
- What's Ahead* 394

Geology Around Us: El Niño: The Return of the Child 382

Chapter Highlights 394 *The Language of Geology* 395
Questions for Review 395 *Questions for Thought and Discussion* 395

Chapter 14 • Deserts, Glaciers, and Climatic Change 397

Dry vs. Wet: Deserts and Drylands 399
Types of Deserts 401
Wind Erosion 402
Wind Deposits and Desert Landforms 403
Desertification 406
Cold vs. Warm: Glaciers and Ice Sheets 409
Types of Glaciers 409
Changing Glaciers 413
The Glacial Landscape 416
Global Climatic Change 421
The Ice Ages 421
What Causes Climatic Change? 424
What's Ahead 427

Geology Around Us: Ancient Climates Revealed in Ice Cores 422

Chapter Highlights 427 *The Language of Geology* 428
Questions for Review 428 *Questions for Thought and Discussion* 429

 ***The Art of Geology* 430**

PART FIVE • LIVING ON PLANET EARTH 433

Chapter 15 • A Brief History of Life On Earth 435

The Earth's Changing Atmosphere and Hydrosphere 436
The Role of Geologic Processes 436
The Role of Biologic Processes 439
Early Life 440
The Origin of Life 441
The Organization of Life 444
Evolution and the Fossil Record 449
Natural Selection 449
How Fossils Are Formed 453
Life in the Phanerozoic Eon 455
The Cambrian Explosion 456
From Sea to Land 457
Plants 457
Animals 460
Mass Extinctions 464
What's Ahead 465

Geology Around Us: Darwin's Atlantis 452

Chapter Highlights 465 *The Language of Geology* 466
Questions for Review 467 *Questions for Thought and Discussion* 467

Chapter 16 • Earth Resources 469**Renewable and Nonrenewable Resources 470**

Natural Resources and Human History 470

Natural Resources and Modern Society 472

Energy Resources 473

Fossil Fuels 473

Other Energy Sources 484

Mineral Resources 491

Finding and Assessing Mineral Deposits 492

How Mineral Deposits Are Formed 492

*What's Ahead 499***Geology Around Us: Hydrothermal Mineral Deposits Forming Today 494***Chapter Highlights 500 The Language of Geology 500**Questions for Review 501 Questions for Thought and Discussion 501***Chapter 17 • The Role of Geoscientists in the 21st Century 503****Geoscience Careers for the Twenty-First Century 506**

What Do Geoscientists Do? 507

Where Do Geoscientists Work? 507

The Job Outlook 507

Geoscientists and Public Policy 510

Understanding Earth Resources 512

Population and Carrying Capacity 512

Issues in Resource Management 514

Will We Run Out? 514

Understanding Geologic Hazards 515

Hazards and Their Impacts 515

Vulnerability 517

Assessing Hazards and Risks 518

Predicting Hazards 520

The Role of Geoscientists in Hazard Reduction 521

Understanding the Changing Earth System 521

Anthropogenic Impacts 522

Uniformitarianism Revisited 523

*What's Ahead 525***Geology Around Us: Areas of Specialization in Geoscience 508***Chapter Highlights 525 The Language of Geology 526**Questions for Review 527 Questions for Thought and Discussion 527***Appendix A: Units and Their Conversions A1****B: Tables of the Chemical Elements and Naturally Occurring Isotopes A7****C: Tables of the Properties of Selected Common Minerals A12****D: Bowen's Reaction Series A19****E: Symbols Commonly Used on Geologic Maps A22****Glossary G1 Credits C1 Index I1**
